CONTENTS.

COMMERCE OF THE UNITED STATES.

SUMMARIES:

Merchandise—

Total values of, by groups—

IMPORTS according to degree of manufacture and uses	1503
EXPORTS, domestic, according to sources of production, and total foreign	1503
DUTIES collected	1503
Remaining in warehouse	1503

GOLD and SILVER	1503
TONNAGE	1503

MERCHANDISE, by articles, quantities, and values of:

IMPORTS	1504
EXPORTS: Domestic	1525
Foreign	1554
Remaining in warehouse on January 31, 1898, and January 31, 1899	1562
Warehouse transactions, by months	1565
IMPORTS and EXPORTS, total values, by customs districts	1566
by countries	1569

IMPORTS AND EXPORTS:

Total values of—

MERCHANDISE, by months	1572
GOLD ORE, BULLION, and COIN, by months	1573
SILVER ORE, BULLION, and COIN, by months	1574
GOLD and SILVER, by customs districts and countries	1575
GOLD and SILVER ORE, BULLION, and COIN, by customs districts, for January, 1899	1577
MERCHANDISE from 1835 to 1898	1578
GOLD and SILVER COIN and BULLION, 1835 to 1898	1579
By flag of carrying vessel, by customs districts and countries, January, 1898 and 1899	1580

SUGAR, imports of, by customs districts, countries, and months	1594
--	------

WOOL, raw, imports of, into Boston, New York, and Philadelphia, by countries and classes, January, 1899	1596
by months, countries, and classes	1597

VESSELS entered and cleared in the foreign trade, January, 1899	1599
---	------

IMMIGRANTS, number of, arrived in the United States, by sex and nationality, during October, November, and December, 1898	1601
---	------

PRICES.

PRICES, COMPARATIVE, LEADING ARTICLES:

United States markets	1604
Imports	1617
Exports	1618
London markets	1619

FINANCIAL TABLES.

TREASURY FINANCIAL TABLES:

a Includes gold and silver in ore.

NOTE.—Gold and silver can not be separately stated in domestic exports before 1864, but it is probable that the greater portion of the exports was gold.

SUBMARINE AND LAND TELEGRAPHS OF THE WORLD,

SHOWING

LOCATION, NUMBER, LENGTH OF LINES, SERVICE PERFORMED,
COST OF CONSTRUCTION, AND HISTORY OF SYSTEM;

WITH

ADDITIONAL DATA REGARDING THE LAND TELEGRAPH LINES OF THE WORLD AND THEIR SERVICE.

SUBMARINE TELEGRAPHS.

The submarine telegraphs of the world number 1,500. Their aggregate length is 170,000 miles; their total cost is estimated at \$250,000,000, and the number of messages annually transmitted over them 6,000,000. ^a All the grand divisions of the earth are now connected by their wires, and from country to country and island to island the thoughts and words of mankind are instantaneously transmitted. Beneath all oceans save the Pacific the universal language which this system has created flows uninterruptedly, and man talks as face to face with his fellow-man at the antipodes. Darkest Africa now converses daily with enlightened Europe or America, and the great events of the morning are known in the evening throughout the inhabited world. Adding to the submarine lines the land-telegraph systems by which they are connected and through which they bring interior points of the various continents into instantaneous communication, the total length of telegraph lines of the world is 835,000 miles, the length of their single wires or conductors 3,500,000 miles, and the total number of messages annually sent over them 365,000,000, or an average of 1,000,000 messages each day.

In the short half century since the practicability of submarine telegraphy was demonstrated, the electric wires have invaded every ocean except the Pacific. Nearly a score of wires have been laid across the Atlantic, of which no less than thirteen now successfully operate between the United States and Europe, while three others span the comparatively short distance between South America and the African and south European coast lines. Throughout the Indian Ocean, lines connect the far East with Europe and America by way of the Red Sea, the Mediterranean, the western coast of Europe, and the great trans-Atlantic lines. The Mediterranean is crossed and recrossed in its entire length and breadth by numerous cable lines, and the "Mediterranean of America," the Gulf of Mexico and the Caribbean Sea, is traversed in all directions by lines which bring its islands and colonies into speaking relations with each other and with South America, Central America, the United States, and thence with Europe, Africa, Asia—the whole world. Along the eastern coast of Asia, cable lines loop from port to port and island to island, receiving messages overland from eastern Europe by way of the Russia-Siberian land lines and forwarding them to Japan, China, Australia, New Zealand, the Straits Settlements, Hongkong, and the Philippines, and receiving others in return. South America is skirted with cable lines along its entire border save the extreme south, where they are brought into intercommunication by land lines. Along the entire coast of Africa, cables loop from place to place and from colony to colony, stretching along the entire circumference and penetrating the interior by land lines at various points.

Every body of water lying between the inhabited portions of the earth, with the single exception of the Pacific Ocean, has been crossed and recrossed by submarine telegraph lines. Even that vast expanse of water has been invaded along its margin, submarine wires stretching along its western border from Siberia to Australia, while its eastern borders are skirted with lines which stretch along the western coasts of the two Americas. Several adventurous pioneers in Pacific telegraphy have ventured to considerable distances and depths in that great ocean, one cable line running from Australia to New Zealand, a distance of over 1,000 miles, and another extending from Australia to the French colony of New Caledonia, 800 miles seaward.

The chief obstacle in the past to the construction of a grand trans-Pacific cable was found in the fact that midocean resting places could not be satisfactorily obtained or arranged for, no single government controlling a sufficient number of suitable landing places to make this seem practicable, in view of the belief that the distance through which messages could be sent and cables controlled was limited. With landing places at Hawaii, Wake Island, Guam, and the Philippines, however, no section of a cable stretching from the United States to Asia and touching at these points would have a length equal to that now in daily operation between France and the United States. The length of the French cable from Brest, France, to Cape Cod, Mass., is 3,250 miles, while the greatest distance from land to land on the proposed Pacific route would be that from San Francisco to Hawaii, 2,089 miles, that from Hawaii to Wake Island being 2,040 miles, from Wake Island to Guam 1,290 miles, from Guam to Manila 1,520 miles, and from Manila to the Asiatic coast 630 miles. While the depth of the Pacific is somewhat greater than that at which any cable has been laid, the difference between its depth and the greatest reached by

^a Of this total about 150,000 miles belong to 35 companies operating the commercial cables, which number about 320; the remainder are mostly short lines controlled by governments, and connecting forts, batteries, signal stations, light-houses, etc., the aggregate of governmental lines being about 1,150 and their total length about 20,000 miles. In addition to this the governments of the world hold about 80,000 miles of cable in stock for war purposes, ready to be laid at a moment's notice.

cables in the Atlantic would be very slight, the cable recently laid from Haiti to the Windward Islands being in 18,000 feet of water, while the greatest depth between San Francisco and Hawaii is 18,300 feet, and the greatest depth between Hawaii and Manila is estimated at 19,600 feet, though this estimate is yet to be verified by detailed soundings. Otto Krummel, who was the first to discuss the bathymetric data and calculate the area and volume of the various oceanic basins, puts the mean depth of the Pacific at 2,160 fathoms, against 2,040 for the Atlantic, in which cables have already been so successfully laid, and later researches and actual soundings, while they have developed extreme depths at certain points in the Pacific, have not, in the opinion of experts, been such as to warrant the belief that the depths along the proposed line would be considerably greater than those in which cables have been already successfully laid and operated.

The developments in the construction, laying, and operating of submarine cables and in their availability for general public use have quite kept pace with their extension throughout the civilized world. From a mere gutta-percha-coated wire, the submarine conductor of electricity has developed in a half century into a great cable having a central copper core surrounded by numerous layers of nonconducting material and protected by steel wire wound spirally about it, and in turn further protected by waterproof and insect-proof wrappings. From a steamer-towed open barge, the facilities for laying have developed to a fleet of nearly fifty steam vessels, with every facility for laying, picking up, splicing, and repairing the cable lines. From a speed rate of three words per minute, which was made on the first trans-Atlantic cables, the speed of transmission has been accelerated to fifty words per minute, and even more than that with the automatic transmitters now coming into use with cable lines, while by the duplexing of the cables their carrying capacity is doubled. From a cost to the sender of \$100 per message, which was originally charged on the first trans-Atlantic cables, the rate from New York to London and the great cities on the continent of Europe has fallen to 25 cents per word. From several hours required for the transmission of a message and receipt of a response, the time has been so reduced that messages from the Executive Mansion to the battlefield at Santiago were sent and a response received within 12 minutes, while a message sent from the House of Representatives in Washington to the House of Parliament in London in the chess match of 1898, was transmitted and the reply received in 13½ seconds.

The effect of this ready and inexpensive method of transmitting thoughts and words from continent to continent throughout the civilized world is shown in the rapid development of international commerce since it began. The first successful cable lines between the United States and Europe were put into operation in 1866. In that year our commerce with Europe amounted to \$652,232,289; in 1876, to \$728,959,053; in 1886, to \$898,911,504; in 1896, to \$1,091,682,874, and in 1898, to \$1,279,739,936, while our commerce with the whole world, which in 1866 amounted to \$783,671,588, had by 1898 reached the enormous sum of \$1,847,531,984.

With this evidence of the advantage of prompt communication between commercial centers desiring an interchange of their products, it may not be improper to call attention to the fact that the United States now obtains but a small proportion of the commerce of Asia, which it is at present only able to reach through the long and devious submarine and land telegraph lines across the Atlantic, the continent of Europe, the Mediterranean, the Red Sea or the Persian Gulf, the Indian Ocean, land lines across India, cable lines again by way of the Straits Settlements, and thence along the Asiatic coast and among the islands of Oceanica. The commerce of the countries of Asia and Oceanica lying commercially adjacent to the Philippine Islands amounts to more than \$2,000,000,000 annually, their imports alone averaging \$100,000,000 a month, or \$1,200,000,000 per annum. Of this enormous market the United States at present obtains less than 6 per cent, despite the fact that the imports into the countries in question are largely composed of the classes of articles produced in the United States and offered for sale by her manufacturers and merchants. With a direct cable communication across the Pacific, direct water communication through a Nicaraguan canal, and an increase in the number and capacity of American steamships, it seems not improper to suppose that a material addition might be made to the share obtained by the United States in the trade of that part of the world.

The table which follows shows the total imports into and exports from the countries of that part of the world now least accessible to the United States by these methods of communication.

COMMERCE OF ASIA AND OCEANICA.

CHRONOLOGY

OF SUBMARINE TELEGRAPH CONSTRUCTION THROUGHOUT THE WORLD, AND THE DEVELOPMENT OF SUBMARINE TELEGRAPHY.

[Compiled from Submarine Telegraphs, by Charles Bright, F. R. S. E., England (1898); Encyclopædia Britannica; American Cyclopædia; Johnson's Cyclopædia, etc.]

- 1795. Submarine telegraphy suggested by Salva, a Spaniard, before the Barcelona Academy of Sciences.
- 1797. Salva proposed submarine communication between Barcelona and the island of Majorca.
- 1803. Aldini, nephew of Galvani, performed experiments in the transmission of electric signals under the sea near Calais, France.
- 1812. Schilling ignited gunpowder by electricity transmitted through a subaqueous conducting wire under the Neva River near St. Petersburg.
- 1813. Electric signals transmitted through 7 miles of insulated subaqueous wire by John Robert Sharpe, of England.
- 1838. Practical telegraphy under water demonstrated by actual experiment by Colonel Pasley, of the Royal Engineers, at Chatterton, England.
- 1839. Dr. O'Shaughnessy, director of the East India Company's telegraph system, transmitted telegraphic signals through insulated wires under the river Hugli, in India.
- 1840. Prof. Charles Wheatstone, of England, suggested the practicability of connecting Dover, England, and Calais, France, by a submarine telegraph.
- 1842. Prof. Samuel F. B. Morse, of the United States, transmitted electric currents and signals through an insulated copper wire laid for that purpose between Castle Garden and Governors Island, in New York Harbor, demonstrating the practicability of submarine telegraphy.
- 1843. Professor Morse suggested submarine electric communication between the United States and Europe. Samuel Colt, of the United States, operated a submarine telegraph between New York City, Coney Island, and Fire Island.

1845. Ezra Cornell, of the United States, laid and successfully operated 12 miles of submarine copper wires in the Hudson River, between New York and Fort Lee, continuing its use several months until its destruction by ice. These wires were insulated with cotton and inclosed in a leaden pipe.
1846. Charles West granted permission by the British Government to establish telegraphic communication between Dover, England, and Calais, France.
1847. J. J. Craven, of the United States, a resident of New Jersey, demonstrated the practicability of submarine telegraphic service by conducting a section of the New York and Washington telegraph line through the waters of a small creek by a wire insulated with gutta percha without interfering with the service of the line of which it thus formed an intermediate section.
1848. Armstrong proposed, in the New York Journal of Commerce, a submarine telegraph across the Atlantic.
1849. Telegrams exchanged over [a combination of aerial and submarine wires between London and Folkestone, England.
1850. Submarine telegraph lines laid across the English Channel and signals exchanged, but soon ceased to operate, the insulation proving insufficient.
1851. A cable containing four copper wires, insulated with gutta percha and surrounded by tarred hemp and protected by 10 galvanized iron wires wound spirally about it, laid across the English Channel by a company of English and French capitalists. This line worked successfully and was opened for public telegraph business November 13, 1851, being the first successful submarine telegraph and continuing in constant use many years. Its weight was 7 tons to the mile; length, 25 miles; depth of water, about 120 feet; it was laid from an oblong coil on a ponton hull or barge towed by two steamers.
1853. Six submarine telegraph cables laid, connecting England with Ireland, Scotland, and the continent of Europe, the longest being about 100 nautical miles, and all proving successful.
1854. Five additional cables laid in European waters, the longest being 64 miles.
1856. Several additional cables laid in deeper waters than on former occasions; one from Newfoundland to Cape Breton, and one from Spezia, Italy, to Corsica at a depth of 600 feet, weight 8 tons per mile.
1857. First attempt to lay a submarine telegraphic cable across the Atlantic Ocean, the enterprise being headed by Cyrus W. Field, of New York, and Charles Bright, J. W. Brett and others, of England. The cable was to extend from Valentia, Ireland, to Newfoundland, the length of cable necessary being estimated at 2,500 miles. The construction of this cable was similar to that across the English Channel, already described. After 255 miles had been laid from Valentia westward, the cable broke and the work was abandoned.
1858. Renewal by Mr. Field and his associates of the attempt to lay a submarine telegraphic cable across the Atlantic. The United States naval vessel *Niagara*, and the British naval vessel *Agamemnon*, carrying each one-half of the cable, proceeded to mid ocean, and after joining the ends of their respective sections, on July 29th, proceeded westward and eastward, paying out the cable and reaching their respective destinations, Newfoundland and Valentia, on the same day, August 5, 1858, when electrical connection between the continents was at once established over the 2,050 nautical miles of cable which they had thus laid. Congratulatory messages were exchanged between the President of the United States and the Queen of England, and there were public rejoicings in both countries over what was pronounced the great event of the century. After less than one month of operation, however, the cable ceased working and it was never operated further, nor was any part of it ever recovered. During the time of its operation, 730 messages of about 10,000 words were passed over it. Its total cost was \$1,256,250.
1859. A submarine telegraphic cable to connect England with British India was laid through the Red Sea and Arabian Sea to Kurrachee, India, having a total length of 3,043 nautical miles, but with several intermediate landings. Some portions of the line worked satisfactorily for thirty days, but few if any messages were ever sent through the entire line, and it soon proved a complete failure.
1860. Elaborate study of the entire subject of submarine telegraphs and the construction of cables was made by a committee appointed by the British Board of Trade, resulting in an expression of the belief that submarine telegraphy might, despite past failures, become successful and profitable if sufficient care were exercised in constructing, laying, and managing the cable.
1861. A submarine telegraphic cable, which had been manufactured with great care, was laid across the Mediterranean from Malta to Alexandria, Egypt, with intermediate landing places at Tripoli and Benghazi. The cable consisted of seven copper wires stranded together, covered with several coatings of gutta percha alternated with other nonconducting and waterproof material, and in turn covered and protected by eighteen iron wires wound spirally about this core. This cable proved a permanent success and went into general operation shortly after its construction. The speed of transmission, which on the Atlantic cable and the shorter submarine lines had been three words per minute, was brought up to

ten words per minute on each separate section, but was only three words per minute when all the sections were united and operated as a single line of 1,331 miles.

1862. A submarine cable which had been laid across the Mediterranean Sea between France and Algeria in 1861 proved a complete failure after a few months of experiment.
1864. Construction of a cable line to connect India with England undertaken by the Indian Government, the line to be laid through the Arabian Sea and Persian Gulf to connect with land lines, thence to Calais and by the short submarine line under the British Channel to England. The submerged line in the Arabian Sea and the Persian Gulf had a total length of 1,450 miles, but with three intermediate landing places. This line consisted of a copper core surrounded by layers of gutta percha, alternated with other nonconducting and waterproof material, being protected by an outer sheathing of 12 galvanized iron wires wound spirally about it, which in turn were protected by double wrappings of tarred hemp yarn. All of these materials and the various sections of the cable were constantly and thoroughly tested electrically and otherwise during its construction. The line when laid proved a complete success, becoming the first successful telegraphic connection between England and India.
1865. Another attempt made by Cyrus W. Field, of the United States, and his associates in the United States and England to lay a submarine telegraph cable from Valentia, Ireland, to Newfoundland and the United States. The cable, for which the contract price was \$3,000,000, partly in cash and partly in shares of the company, consisted of 7 copper wires surrounded by numerous coatings of gutta percha and other waterproof nonconductors. This was in turn surrounded with 10 Bessemer steel wires, this being the first use of steel wires for cable protection, each wire being separately wound with pitch-soaked hemp yarn, the shore ends being also further protected by 36 heavy iron wires wound spirally about the completed cable. The steamer *Great Eastern*, then the largest steamship afloat, was specially fitted up for laying this cable. Great care was exercised in every particular, but after 1,186 miles had been laid westward from Valentia the cable broke in water over 11,000 feet deep, and the attempts to recover it were unsuccessful.
1866. Mr. Field and his associates renewed their efforts to lay a cable across the Atlantic. A new company with \$3,000,000 capital was formed with the double purpose of attempting to find the end of the cable partially laid in 1865 and complete the line, and also to lay another cable parallel with, and near to it. The cable manufactured for the proposed new line was similar to that of 1865, but with the shore ends also protected by wrappings of tarred hemp outside the 36 iron wires which surrounded the cable proper. The *Great Eastern* was remodeled to further meet the requirements of the work, and left Valentia, Ireland, July 13, 1866, paying out the cable in a line about 25 miles north of that followed on the preceding year. She arrived safely at Newfoundland in fourteen days from the date of leaving Valentia, and electrical communication was immediately established between the United States and England, which has never since been more than temporarily interrupted. The *Great Eastern* then returned to the spot where the cable was lost in 1865 and after eighteen days' work succeeded in bringing the end on board from a depth of over 11,000 feet, the tests immediately made showing it to be in perfect working connection with the Valentia end. A splice was made and the laying of the line toward Newfoundland resumed and on September 8 the cable was landed at that point and the second successful line of communication between the United States and Europe thus completed, Newfoundland being already in submarine telegraphic communication with the mainland and telegraph systems of the United States. The length between Trinity Bay, Newfoundland, and Valentia, Ireland, is given by the American Cyclopædia at 2,134 miles. The rate of speed in transmission over these cables was at the beginning 8 words per minute, but increased to 15 words per minute.
1868. A second Anglo-Mediterranean line, laid from Malta to Alexandria, proving a complete success.
1869. First French Atlantic cable laid from Brest, France, to Nova Scotia, proving successful on completion. A line from Suez to Bombay, India, also successfully laid by the British Indian Submarine Telegraph Company.
1871. Cables laid by the Great Northern Telegraph Company along the eastern coast of Asia connecting Hongkong, Shanghai, and Nagasaki with the terminus of an overland telegraph line running from St. Petersburg through Russia and Siberia to Possiet Bay near Vladivostok, Siberia. This transcontinental land line had been constructed after the failure of the Atlantic cable in 1858 with the purpose of obtaining land telegraphic communication between Europe and America by way of Russia and Siberia, with a short cable across Bering Straits and a line thence through Alaska and British North America to the United States. The project was, however, abandoned on the success of the Atlantic cable in 1866, and the line from St. Petersburg to the eastern coast of Siberia was utilized to connect the European telegraphic system with the newly laid cable lines along the eastern coast of Asia, stretching southward from Vladivostok by way of Nagasaki and Shanghai to Hongkong, Straits Settlements, and Australia.

1872. Amoy, China, connected with the cable system of the Great Northern China-Japan line by tapping their main cable directly opposite that point.
1873. Cable laid between Brazil and the British West India Islands, connecting there with a cable line to New York and thence to Europe. Cable also laid between Lisbon and Madeira.
1874. The duplex system applied to submarine telegraph lines, nearly doubling the capacity of the cable systems to which it is applied. Over 50 per cent of the cable lines of the world are now duplexed.
1875. New Atlantic cable between Ireland and the United States completed. Also lines laid between Jamaica and Porto Rico, Constantinople and Odessa, and elsewhere.
1876. Cable lines laid along the west coast of Africa; also along the western coast of South America.
1878. Port Natal, Africa, and the Cape of Good Hope connected by cable; also lines extended along the eastern coast of Africa.
1879. New French cable laid connecting France and the United States; further extension of lines along the eastern coast of Africa.
1880. Company formed to lay cable lines across the Gulf of Mexico, connecting with an overland line at the Isthmus of Panama; thence connecting with cable lines on the western coast of South America, giving direct communication between that coast, the United States, and Europe.
1881. New trans-Atlantic line laid by the American Telegraph and Cable Company, headed by Jay Gould.
1882. Another Atlantic cable laid by the same company. Lines also laid on the west coast of South America.
1883. Spanish National Telegraph Company organized to construct a cable line from Spain to the Canaries.
1884. Two trans-Atlantic cables laid by the Commercial Cable Company organized in the United States, headed by J. W. Mackey and James Gordon Bennett.
1885. Additional cables laid on the west coast of Africa.
1886. Cable lines laid in the Mediterranean, to connect Italy with various adjacent islands.
1887. French colonies in the West Indies connected by cable with French Guiana and La Guayra Venezuela.
1889. Cable line authorized by the British Government, to connect Halifax and the Bermudas. This line passes through water 17,000 feet deep.
1891. The French Government contracted for lines from Marseilles to Oran and Tunis, to be constructed exclusively by French workmen and of French material where practicable.
1892. Cable laid across the South Atlantic from west coast of Africa to Pernambuco, Brazil, by the South American Cable Company.
1893. Cable line laid from Australia to the French colony of New Caledonia, 800 miles distant.—Lines laid under direction of the Portuguese Government, to connect the Azores with Lisbon, Portugal.
1894. Two additional trans-Atlantic lines laid by the Commercial Company and one by the Anglo-American Company. These consisted of a very large copper wire weighing from 500 to 650 pounds per mile, surrounded by 12 smaller wires. These were heavily insulated and again surrounded by a sheathing of steel wires, which in turn were surrounded by a heavy waterproof protection. The object of adopting the very heavy copper wire was to facilitate the use of automatic sending machines, by which the speed of transmission is greatly increased.
1896. Cable laid from New York to Cape Haitien, Haiti, with connection thence to Santiago, Cuba, and a southern line to the Windward Islands and South America, with a depth at places of 18,000 feet, the greatest depth at which cables have been laid. It was over this line that the chief telegraphic communication between the United States and its representatives at Santiago, and in the West Indies generally, was conducted during the war between the United States and Spain, the cable lines by way of Havana being under control of the Spanish authorities in Cuba. Messages from the Executive Mansion and War and Navy Departments passed from Washington to New York by land line, were there transferred to the cable, thence to Cape Haitien where they were transferred to the cable line running to Santiago, which had been cut near by the United States Signal Corps, and landed at Caimanera, which was controlled by the United States forces. There the messages were transferred from the cable to the land line reaching to the battlefield in front of Santiago. Messages from the War Department and Executive Mansion reached the battlefield in from 10 to 15 minutes, and on one occasion during the progress of the battle a message was sent and reply received within 12 minutes.
1897. The Halifax-Bermuda cable line extended from Bermuda to Kingston, Jamaica, by way of Turks Islands.
1898. An additional trans-Atlantic cable laid by the French Company between France and the United States.

SUBMARINE CABLE LINES OF THE WORLD.

SHOWING LENGTH, POINTS BETWEEN WHICH OPERATED, COMPANY OPERATING, ETC., ALSO THE LINES OWNED AND CONTROLLED BY VARIOUS GOVERNMENTS.

INTERNATIONAL RULES

GOVERNING THE TRANSMISSION OF CABLE MESSAGES; PREPARED BY TELEGRAPH AUTHORITIES OF EUROPE.

THE RULES AND REGULATIONS WHICH GOVERN THE TREATMENT OF "CABLE" MESSAGES ARE PREPARED BY THE TELEGRAPH AUTHORITIES OF EUROPE FOR THEIR GUIDANCE IN INTERNATIONAL TRAFFIC. THE MAXIMUM LENGTH OF A CHARGEABLE WORD, THE USE OF "CODE" WORDS, "CIPHER COMBINATIONS," "FIGURES," AND "LETTERS," AND THE LANGUAGES FROM WHICH CODES MAY BE COMPILED, WITH OTHER REQUIREMENTS, ARE FIXED BY THESE RULES; AND TO THESE THE COMPANIES WHICH TRANSMIT CABLE MESSAGES TO AND FROM AMERICA (THOSE TO AND FROM MEXICO EXCEPTED) MUST NECESSARILY CONFORM.

1. Every address must contain at least two words, and must be sufficient to secure delivery.
2. All that the sender of a message writes for transmission to his correspondent is counted and charged for.
3. Messages may be written in any language that can be expressed in Roman letters. They may be in plain or secret language. Secret language may be subdivided, if desired, into code or cipher language, and each of these—i. e., plain, code, and cipher—may be employed alone or conjointly in the same message.
4. Plain language is that which is composed of words forming intelligible phrases, in one or more of the languages authorized for international telegraphic correspondence.
5. Code language is that which is composed of words not forming intelligible phrases. Code words must not be longer than ten letters each. They may be taken from one or more of the following languages, viz: English, German, Spanish, French, Dutch, Italian, Portuguese, and Latin. Code words taken from other languages are not allowed.
6. Cipher language is that which is formed of groups or of a series of figures having a secret meaning. The employment (except as commercial signs) of single letters, or groups of letters, to convey secret meaning is not allowed.
7. Combinations or alterations of words contrary to the usage of a language are not allowed.
8. In plain messages—i. e., words containing neither code words nor cipher groups of figures—words of fifteen letters, or less, are each counted as a word. Words of over fifteen letters are counted at the rate of fifteen letters to a word, plus one for any excess.
9. In messages composed entirely of code words, each word is counted at the rate of ten letters to a word.
10. In messages composed only of cipher groups of figures, each five is counted as a word, plus one for any excess.
11. Plain words used in code messages are counted the same as code words.
12. Plain words used in cipher messages are counted at the rate of fifteen letters to a word.
13. In messages made up of plain and code words with cipher groups of figures, the plain and the code words are counted at the rate of ten letters to a word.
14. In commercial signs or trade-marks, figures and letters are counted at the rate of five to a word; but if both letters and figures are used, the letters and figures must be counted separately. Example: A5C counts as three words.
15. A sender of a message may pay for a reply up to thirty words. The indication "R. P. 7" or "R. P." (any number up to 30) is counted as one word.
16. A sender of a message may secure its repetition by paying one-quarter more than the regular tolls.

NOTE.—The greatly increased mileage since 1880 is principally due to the fact that in 1881 the Western Union Telegraph Company absorbed by purchase all the lines of the American Union, and the Atlantic and Pacific Telegraph companies, the former having previously in operation over 12,000 miles of line and the latter 8,706 miles.

POSTAL TELEGRAPH CABLE COMPANY.

The following table exhibits the mileage of lines operated, number of messages sent, and number of offices:

EFFECT OF SUBMARINE TELEGRAPHY ON THE WORLD'S PROGRESS.

[From Submarine Telegraphs, by Charles Bright, F. R. S. E., England.]

The great revolution which submarine telegraphy has effected in the world's progress may be regarded from two great standpoints—the political and commercial. Let us begin with the former. In the first place it has accelerated even more perhaps than the improvement in locomotion by land and sea what may be called the practical shrinkage of the globe. The nations and people of the globe, being in continual contact with each other through the telegraph and its powerful ally, the press, know one another and understand one another's actions and thoughts and national aspirations infinitely better than they did fifty years ago. The effect of the better knowledge and insight upon their mutual relations may not always be in every instance a happy one, * * * but if the whole world gains, as it undoubtedly does by closer contact and by the lessons which one nation is thereby induced to learn from another, we should not take to heart any relative and maybe quite temporary decrease of ascendancy in certain departments of our national activities. * * *

One political result of this great development of the world's electric wires which Englishmen may safely regard with unusual satisfaction and pleasure is the much closer relation which has thereby been rendered possible between the mother country, the United Kingdom, and the daughter nations, English-speaking, English-modeled as to their institutions, and in the main British and Irish stock, which have sprung up in the most distant parts of the world. The "little England" idea, so fondly cherished by the old Manchester school of economists and politicians (who would gladly have seen all our young and vigorous Anglo-Celtic brood chased as young birds from the parent nest almost before they could fly), is practically as dead as a door nail. In its place we hear on all sides * * * of federation or customs unions between the United Kingdom and its self-governing colonies and India; and grander, if less practicable, than all these, we hear of negotiations for the establishment of a permanent arbitration tribunal for settling peacefully all future differences between the two main divisions of the English-speaking world. * * *

Another department in which the submarine cables have produced a notable political effect is the diplomatic. If the peoples have been brought more in touch with each other, so have the rulers and statesmen. An entirely new and materially improved method of conducting the diplomatic relations between one country and another has come into use with the telegraphic wire and the cable. The facility and rapidity with which one Government is now enabled to know the mind, at least the professed mind, of another, has often been the means of averting diplomatic ruptures and consequent wars during the last few decades. * * *

Let us now turn to the commercial results of this great development of submarine telegraphy. These have been partly anticipated in discussing certain improvements in prices of service and speed of transmission, and altogether the subject is so vast, so complicated, and so far-reaching that to attempt a detailed or systematic account of it within the compass of a work like the present would be but presumptuous. The fact is the methods of conducting business between merchants and financiers in the different countries have been completely revolutionized by the telegraph cable, which places the business man in touch with the new markets of the world. This is so patent to the generation of older business men now living that the younger ones only need reminding of it. Fifty years ago it took a London or Liverpool merchant six months to get an answer to a letter addressed to a correspondent at Calcutta and complete a business transaction. Nowadays, by means of the telegraph, the same transaction can be effected within six hours. Another result of the change and conditions brought about by the wire and cable is the partial elimination of middlemen in some departments of international commerce. * * *

Upon the progress of submarine telegraphy in the future as in the past a great deal of the world's commerce and industrial progress must depend, and not only the progress of the world collectively, but the relative

importance and united relationship of certain parts of it. The constant extension and duplication of the cable and land lines themselves, the fact that the communications have been effected chiefly by Englishmen and retained for the most part in British and American hands, the great reduction made in telegraph tariffs, the improvement in speed and volume of telegraphic traffic may be continued and supplemented by others in the near future. But how and by whom this is to be done, especially whether by men of our race and institutions and in the interests of, or at least not to the detriment of, the continued growth of harmony and union of the English-speaking world, all this depends upon the enterprise as well as the political wisdom and decision of purpose of the present generation. * * *

How soon the greatest gap of all, namely, that across the Pacific Ocean, will be spanned by telegraph cable would be out of place to predict. If, however, the present peace between the great powers of the world is not broken, there is no reason in the nature of things why this great enterprise should be much longer delayed. It is difficult to foresee any insurmountable engineering difficulties in its way, albeit the ground has been only partly sounded over at present. Along one or two of the proposed routes it is true that depths have been found which exceeded by some 700 fathoms those in which any cable has hitherto been laid. This, of course, would necessitate the construction of a well-adapted type of cable as well as of suitable machinery for paying out and (in view of what must be called the usual eventualities) for picking up the same. But such matters will certainly not daunt any telegraph engineer or contractor worth his salt. On the electrical side, again, it has been asserted that if the Pacific line were laid it would not work satisfactorily. This suggestion, however, is not in agreement with the facts, though it is true that the maximum speed on the length of the Australian-British routes (say 3,500 nautical miles) with quite a large core would be low, as compared with that attained on the Atlantic cables, which are of necessity kept heavily burdened with traffic more or less continuously. Still, with a core of the same proportions as that adopted by the "Anglo Company's" last cable, a speed could be attained well up to that required by the Canadian government in 1894. The foregoing would be by ordinary manual transmission, whereas all the latest improvements in the machine transmission would naturally be applied, with something like 30 per cent increase in speed, quite apart from the application of the duplex system. The more doubtful question is, whether the line could be made a commercial success, whether, in fact, even in the next quarter of a century, much more the next ten years, such an expensive enterprise could be made to pay.

Although upon these commercial, as well as what may be called quasi-political, considerations its fate depends, rather than upon any advances in the art of submarine telegraph engineering, some account of what has been said and done in the matter may not be amiss here. The scheme has been considered and discussed by many able authorities for a long time. Thus it is near twenty-seven years since, in 1870, a devious sort of trans-Pacific cable was first proposed by the late Cyrus Field and other American capitalists, who endeavored to negotiate financial arrangements for the purpose. Their plans were to connect California with China by way of Alaska and Japan, but they had to be abandoned.

Since that time the Pacific idea has been further developed in this country (England), and from a national rather than a private or commercial point. The various routes which have found most favor in the English mind are those which provide in the first place for communication between the British colonies and America, with resting places at one or another of the groups of islands in mid-ocean. Her Majesty's Government and the colonial governments most concerned have been urged from time to time to consider the latter in its strategic aspect. Two colonial conferences (in 1887 and 1894) were largely occupied with this subject, as may be gathered from a perusal of the bulky blue books which record their proceedings. The Dominion government took the matter up quite strenuously in 1893-94, and invited the various contracting firms to send in estimates for construction and laying, under condition of forming a company for making and maintaining the cable. Subsequently Lord Jersey, in the course of a long report on the Ottawa conference, strongly recommended the home government to take further steps and to order a series of soundings on the various suggested routes. The proposed telegraph rate from England to Australia by the projected Pacific cable was 3 shillings per word. In view, however, of the loss said to have resulted from the recent reduction of rates on the existing cable systems, some authorities have expressed doubts whether such a comparatively low tariff could be rendered profitable.

There is one other contingency, and a very serious one, in which an extremely undesirable eventuality might occur. In the event of a great war between this country (England) and another naval power or powers, it is quite conceivable that more than one of our Mediterranean cables (if no others) might be ruthlessly cut by the enemy and our communications with Egypt, India, and other eastern and Australian stations entirely broken off. Not only can a cable be cut in the shallow water near the coast by any small steamer with purchase gear that will raise an anchor, but lengths can be removed in a way that would tax the resources of a repairing vessel to replace even if on the spot at the moment. There are also several ways in which a cable can be readily (and at first sight innocently) interrupted at and near the water's edge, to wit, by bonfires on the beach, by fishermen, etc., supposed to be employed on ordinary avocations. Several cables have already been interrupted by bonfires. The

international telegraph convention recognizes, it is true, the principle of protection by government, but the effect of this recognition of responsibility is seriously qualified, perhaps practically annulled, by the following clause: "It is understood that the stipulations of the present convention do not in any way restrict the freedom of belligerents." If the view of said convention be correct, the argument that cables are as safe in times of war as in times of peace falls to the ground.

An additional and entirely independent line of communication between North America, Australasia, and the East, such as the Pacific scheme will afford, becomes therefore a matter of greater moment than the ordinary commercial mind is able to appreciate. It would not only act as a spare string to our bow, but would, for obvious reasons, be less at the mercy of an enemy than the others. Thus, if the ordinary line of communication between England and Alexandria were broken, through the Mediterranean cables being cut, we should be still able to speak to the East, provided the Atlantico-Pacifico-India route around the globe remained intact; and, except in the deplorable and, let us devoutly hope, not very likely event of war with our American cousins, the chances of that route being also interrupted by an enemy's hand are not particularly serious. The standpoint, therefore, from which any early necessity of laying a trans-Pacific cable is likely to be determined is the national, intercolonial, and Anglo-American one, rather than the purely commercial. For their mutual benefit the great English-speaking and English-governed countries, the pan-Britannic Oceania, living here under the "Union Jack," there under the "Stars and Stripes," may decide sooner than either the telegraphic or financial world could hope for or anticipate that they must and will have their Pacific cable.

THE TELEGRAPH THE HIGHEST HOPE OF THE PROGRESS OF MANKIND.

[By Elisé Reclus: 1888.]

Among the material achievements of modern science, that which gives us the highest hope in respect to the future progress of mankind is the electric telegraph. By this invention man ceases to be connected merely with that part of the globe on which he treads so lightly; his liberty is set free from the obstacles imposed by space, and he becomes, as it were, personally present at all the points of space which the conducting wire brings into relation with his thoughts. To the power of his machinery, which might be compared to muscular force, he adds the nervous forces afforded by fibers stretching in every direction; news, transmitted from cell to cell, reaches the brain of man from all the ends of the earth, and his expressed wishes are flashed across continents so as to be transformed into actions on the other side of the globe.

The construction of electric telegraphs did not commence until about ten years after the completion of the earliest railways; but owing to the comparative simplicity of the world's requisite for the establishment of electric wires, the total length of telegraph wires already much exceeds that of the iron roads. For an expense of about 40,000,000 pounds sterling we have been able to set up more than 1,500,000 miles of wire, a length which would reach nearly 650,000,000 miles if we were to reckon all the double and multiple wires of importance. The new wires unrolled every year would be sufficient completely to girdle the whole circumference of the planet; it is the far-reaching stretch of the human will which is thus extended so far over the domain which it has made its own by its skill and energy.

Not only on the surface of the mainland, but also in the depths of the sea, does the electric fluid transmit the thoughts of man all round the globe. By about fifteen wires which rest on the bed of the Channel or of the North Sea, Great Britain is connected with the coasts of France, Belgium, and Holland; Sweden and Norway are directly joined with Germany with wires across the Baltic; Sicily and Sardinia have, in spite of the Mediterranean, become portions of the Italian mainland. We can still recollect with what emotion we greeted the first interchange of thought flashed from one side of the Atlantic to the other, passing under the immense body of water 2,200 fathoms deep and as broad as an eighth part of the circumference of the globe. These first words which the Old World thus sent to the New were words of peace and good will; it was understood by all that the great fraternity of man had thus asserted its existence in a most solemn manner; in spite of all the obstacles nature could offer, in spite of continents, seas, and space, widely distant nations were beginning to be sensible of one common soul. After transmitting these words of peace and scrawling some indistinct syllables, the trans-Atlantic cable, as if exhausted by its first effort, and, as it were, ceasing to live, refused to respond to the learned electricians who were soliciting it on both sides of the ocean; silence had resumed its empire across the broad tract of water. But the persevering Anglo-Saxons did not succumb to the blow of this defeat; they again manufactured thousands of miles of fresh wire, and commissioned their engineers and their most skillful mariners to lay it down in the bed of the ocean. Then, with an anxiety as great as that experienced on the eve of a decisive battle, they witnessed the departure of their finest ship, unrolling as it went the cable which was to unite them to their American brethren. Fresh misfortunes followed, the wire broke in the open sea. No matter; they laid down a third, and the mighty *Great Eastern* made the voyage across the Atlantic without ceasing for one instant to keep up a communication with

the coast of Ireland, just as if she had left in her wake a long electric furrow. At the present time (1888) eleven electric telegraphs connect the two opposite continents, including those now completed between Brest and New York, Havre and Portland, Lisbon and Pernambuco, and Mr. Jay Gould's cable laid down in 1885. Lines, however, of no very great length, especially that from France to Algeria by way of the Balearic Islands, have not been successfully established in a permanent way, the cables having often been broken; the cables also in the Eastern Mediterranean, the Red Sea, and the Indian Ocean have been frequently injured. A total length of 90,000 miles of telegraphic wires, distributed among 600 separate cables, has been laid down in the bed of the sea between various parts of the world, its islands and peninsulas; but there does not at present exist any one continuous line which belts around the whole circumference of the planet, passing across the continental masses and the depths of the ocean. The longest line, that between California and New Zealand, passing through New York, London, Vienna, Constantinople, Bagdad, Calcutta, Singapore, and Sydney, is not less than 20,000 miles in length.

A REPORT ON THE DEVELOPMENT OF COMMERCIAL, INDUSTRIAL, MARITIME, AND TRAFFIC INTERESTS IN GERMANY, 1871 TO 1898, BY MR. GASTRELL, COMMERCIAL ATTACHÉ TO HER BRITANNIC MAJESTY'S EMBASSY AT BERLIN.

[From Diplomatic and Consular Reports to the British Government, January, 1899.]

Part I.—A.—GENERAL STATEMENT OF THE DEVELOPMENT.

A short account of the general lines of development and expansion of the German Empire since its foundation in 1871, and tracing the leading features of its commercial, industrial, maritime, and traffic interests up to 1898, may be of interest to the British public at the present time, when Great Britain and Germany are endeavoring to obtain, by a new treaty of commerce and navigation, a continuity of the friendly international relations which had previously existed during twenty-seven years under the old commercial treaty with the "Zollverein" of May 30, 1865, and under the treaty of navigation with Prussia, concluded a few months later.

IMPORTANT EFFECT OF GROWTH OF FOREIGN INDUSTRIES ON THE IMMEDIATE FUTURE OF BRITISH TRADE.

It is of the greatest importance at the present time that, in the interests of our national progress, all classes of the population in the United Kingdom should devote a closer attention than hitherto to commercial and industrial development abroad, which tends every year to more seriously affect the material growth of British trade. Such expansion in foreign countries is not by any means altogether detrimental to English commerce, as some people affect to believe. On the contrary, it brings with it certain substantial benefits. But with powerful industrial rivals in the field, of whom Germany is now one of the most important, it is essential that every effort be made to maintain, as far as possible, that superiority in special industries which has characterized our staple manufactured products during this century, and which has led to a partial monopoly of certain classes of goods, but which must necessarily diminish as other progressive industrial states arise and produce commodities similar to those which were once only to be purchased in our own country. Under these circumstances it is most deplorable to see any portion, however small, of British trade diverted to foreign competing nations, as has recently been the case through strikes among our population, which react not only on those taking part in them, but on the whole country. In these days of keen competition, it is impossible to realize the amount of the indirect losses to commerce caused by unfortunate and protracted disputes between employers and workmen, which gratuitously hand over portions of trade to the eager foreigner, all too ready to grasp them. If the disputants would but remember this point, they would be less prone to hasty action in such questions.

DETRIMENTAL EFFECT ON BRITISH EXPORT TRADE OF HIGH RATES OF FREIGHT BY LAND AND SEA RULING IN GREAT BRITAIN.

It is needless to say that the development of foreign industry and commerce is equally important to all the industrial and commercial classes of Great Britain, and in order that there may be a continued and satisfactory expansion of British trade, it can not be too greatly impressed upon the British public that in the United Kingdom it is especially to traffic interests both by land and sea that particular attention must now be paid. It is most regrettable to find that instead of granting greater facilities for our own export trade, whereby the development of our national, commercial, and industrial interests abroad would be considerably furthered, many British railway and shipping companies have formed various combinations by which the British exporter finds himself compelled to pay far higher rates of freight, both by land and sea, for goods sent by him to many foreign countries than have to be paid to the same countries by his industrial and commercial competitors on the Continent and in the United States. Hence it is of the greatest importance that in Great Britain the export trade generally—and that of our staple products more particularly—should be more than ever facilitated in every possible way in order to be able to allow British industry and commerce to take full advantage of old and new markets on at least a *perfect equality with foreign competing nations*. Fresh evidence of this disadvantage under which our merchants unfortunately labor when endeavoring to combat keen foreign competition, has just been afforded by the report of the special commissioner, recently appointed by the board of trade to inquire into the prospects and conditions of British trade in South America, in which he says that one of the causes of the nonexpansion of our commerce in that part of the world is the fact that such cheaper shipping freights are granted from foreign ports.

EFFECT OF THE FOUNDATION OF THE EMPIRE ON COMMERCIAL PROGRESS.

Financial and agricultural interests are not included here, for they have been extensively dealt with in many reports issued by the foreign office in late years. Moreover, they are not subjects which to-day so directly concern and affect the English nation as do the remarkable progress and untiring rivalry of the Germans in the daily extending and sometimes conflicting spheres of the commercial, industrial, maritime, and traffic interests of both countries. A cursory study of these four subjects only will afford ample insight into the actual *status* of the German Empire as a new but powerful mercantile State, for it is, comparatively speaking, a new commercial nation since 1871. Previous to that time the want of united action, commercially even more than politically, did not allow of rapid expansion. But when in that year the numerous German States were merged more closely into a united Empire, under the German Emperor, an immense political work was accomplished. The immediate effects, however, on the possibilities of national development, especially as regards commercial and industrial progress, were, perhaps, greater still.

BISMARCK'S COMMERCIAL WORK HELPED BY THE DISPOSITION OF THE PEOPLE.

After completing his famous political work, Prince Bismarck devoted himself to direct the national energies of the people to peaceful and commercial aims. He tried to instil into a united and regenerated Germany the commercial spirit and the vigorous energy of the old Hanse Towns, and he achieved a success beyond his most sanguine hopes. It may well be said that he completed his political work of consolidating the Empire by his indefatigable exertions in paving the way for a great commercial and industrial future. To-day is seen on all sides a prosperity hardly dreamed of by the most enthusiastic patriots twenty years ago.

Putting entirely on one side, however, all that German statesmen have done to aid and direct the nation in its ambition to become a great commercial State, in addition to being a great political Power, nothing would have availed them in their laudable objects had it not been for the national and ingrained character of the German himself, which is so eminently suited to commercial enterprise, and which may be briefly described in one word "thoroughness." It is, undoubtedly, in the first instance to this "thoroughness" of methods in every department pertaining to commerce that the Germans have attained the position of a first-class merchant Power. This most valuable characteristic has permeated all classes of the people, and its effects can be seen in the manner of carrying out every private or national enterprise. No details are too insignificant to be considered in attaining a given end. No trouble is too great to take in mastering *minutiae*. There is no doubt whatever that in competing with other nations it has been rather in consequence of a mass of small innovations than by great changes that they have succeeded in their national aspirations of becoming the most important commercial power on the Continent and inferior only in the whole world to Great Britain and the United States. It may also be incidentally mentioned here that, with regard to her whole merchant fleet of steamers and sailing ships, Germany similarly holds a third place. The combination of these two single facts will, perhaps, carry more weight of proof than anything else could to those skeptical English persons who still affect to believe that the alleged prosperity and consequent rivalry of Germany in commercial matters is purely relative and insignificant and not in the least positive and important, especially when considering the future of some of our staple industries, such as the metal and cotton trades. When it is more widely realized that in 1897 the value of German exports of domestic produce was £176,030,200, or only £58,189,508 less than the £234,219,708 worth of similar exports of British origin, and that the proportion thereof per head of the population is tending to rise in Germany and to fall in England, perhaps the British public will begin to devote closer attention to commercial and industrial development on the Continent. The actual value per head last year for the Germans was nearly £3 6s., as compared with £5 17s. for us, the populations being respectively 53,500,000 and 40,000,000 in 1897.

Another factor that is considered to have helped the development both of home industries and foreign trade is the great extension in Germany of the principle of association or cooperation among the commercial classes for every kind of mercantile enterprise. The smaller people, who are unable to incur great expense individually, combine for common ends to an extent not known in England. This system is often a marked contrast to the characteristic *individual efforts* of the Englishmen in commerce. Both have advantages and disadvantages. But in the present days of keen competition there is a great deal to be said for more extensive cooperation where the individual effort is insufficient for its immediate purposes. An instance of this principle is to be found in the remarkably well organized "export unions" in the German Empire, which have done so much with their extensive organization to further foreign trade in all parts of the world. The tendency to form industrial combinations has, in late years, had a great influence on the development of the country.

CHANGES IN COMMERCIAL POLICY.

The industrial expansion of the country has necessitated a gradual change of commercial policy, as is explained later. The policy, begun in 1891 and since maintained, has as its basis the general principle of securing by tariff treaties wider foreign markets for German manufacturers, while admitting from abroad most raw materials for the

home industries free of all duty, and food stuffs for the people at reduced customs rates. How best to attain this end is now the main object of Germany's foreign policy. Her future position as a leading mercantile nation will depend very much on the attitude she may be able to assume on January 1, 1904, when the seven tariff treaties with Austria-Hungary, Belgium, Italy, Roumania, Russia, Servia, and Switzerland will have expired, and when she can also be free of almost all other existing commercial treaties of whatever nature by giving the notice stipulated for in each as to their expiration. On that date the German Government will therefore be free to negotiate afresh with nearly all the world on the basis of the masses of valuable information which they began to collect last year with the object of having reliable data to work upon when negotiating the new treaties to come in existence in 1904. The nature of this work and the progress made is noted hereafter more fully, but it may be briefly stated here that a new "autonomous" tariff is now considered desirable, both on commercial grounds and because of technical deficiencies as regards the present classification of goods, which does not sufficiently specialize imported commodities. This is said to place the Empire at a disadvantage when dealing with the more highly specialized tariffs of other Governments.

CONFLICTING INTERESTS OF AGRICULTURE AND INDUSTRY.

One great difficulty that existed when the present seven tariff treaties were made under General Caprivi, which has indeed always existed, and which will continue to exist in 1904, is the changing relative importance of agriculture and of industry as economic factors in national development. An account of this subject during the twenty-seven years of the existence of the Empire would form a history in itself. It must suffice to state here that whereas the agricultural interest in 1871 were paramount, it is the industrial interests that have undoubtedly predominated in recent years. Moreover, the future of industry is assured, and will go on increasing year by year, whereas that of agriculture seems less promising, and will doubtless, for many reasons, remain comparatively more or less stationary, as in England.

This new state of things has naturally brought about a great tension between the classes whose interests lie in the old-established agricultural occupations, and those whose interests are derived from the comparatively new-born industries. A sharp line divides the two and makes it difficult for the state to reconcile, either politically or commercially, their divergent interests. Statistics taken in 1882 and 1895 show that the number of persons out of every 1,000 supported by agriculture in the former year was 425, whereas by the latter it had fallen to 357, and that meanwhile the contrary movement had taken place in industry, for in 1882 355 persons out of every 1,000 were supported by industry, which figures had risen to 391 by 1895. The number of people supported by commerce had also increased from 100 to 115 in every 1,000 of the total population of the Empire. Such facts need no comments, and mark well the progress of events.

At the present time the agricultural party are dissatisfied with the working of the tariff treaties, which, they say, unfairly benefit the industrialists at their expense by admitting foreign grains at specially low duties in order to secure better markets abroad for industrial produce. They have even gone so far as to demand that these treaties should be canceled. It is now, however, quite understood that their claims will be fully recognized in the new commercial treaties of 1904; and the Government has practically pledged itself to promote all interests alike, whether industrial or agricultural. The maintenance of home agriculture is also, from a military point of view, most necessary to the state in order not to be entirely dependent on foreign food supplies.

FUTURE COMMERCIAL WARFARE AND THE PARIS EXHIBITION IN 1900.

During the past two years, 1897 and 1898, two subjects have been prominently before the German public in connection with commercial questions of the future. One is the work being done in preparation for the 1904 treaties, as mentioned above, and the other is the action being taken with regard to the Paris Exhibition of 1900. Both are intimately connected with the future *status* of German trade in the next decade. The twentieth century will certainly be one in which commercial warfare will assume an importance never known before. Questions connected with trade are every day becoming more prominent, and they occasionally even throw political ones into the shade. The competition for the world's markets must necessarily become keener as the struggle for existence becomes more severe.

In Germany no effort will be spared, either on behalf of the Government or of private persons, to avail themselves of every possible means to establish the commercial relations of the German Empire on a firmer and more impregnable basis than ever. The means to this end have been most carefully considered by the State and are already being carried out with method and zeal on all sides. It must be considered as a most fortunate circumstance for the Germans that, at the Paris Exhibition of 1900, it will be possible for them to exhibit to the world—just three years before negotiating the new commercial treaties—the range and wealth of all their present productive power. The importance of impressing other countries as to their twentieth century possibilities in every branch

of industrial production is evident, especially if they can, on that occasion, satisfactorily demonstrate to them their equality if not superiority to Great Britain in some directions. In any case it will be clearly shown at Paris—for the first time on a very large scale—how remarkable is the similarity of the bulk of German and British products, particularly in textiles and in the metal industries.

The German Government has voted a sum of £250,000 for the expenses of the German exhibits at the Paris Exhibition, while the British Government has granted a much smaller sum toward the expenses of the British section. In England, unfortunately, the immense value of such international exhibitions is not realized as it should be, and many British manufacturers are even opposed to exhibiting on such occasions. Such an attitude will be bitterly regretted some day when the folly of having lost such an opportunity is at last realized.

If, at this coming Paris Exhibition, the British exhibits are allowed to be in any way inferior to the German, either in range or quality—instead of being, as they ought to be, far superior—there will most certainly result some injury to British trade. And this injury is all the more likely to ensue from the important fact that at this exhibition, for the first time, the same kinds of products from different countries will be shown alongside one another, so that any deficiencies in British exhibits will be all the more marked in the eyes of foreign customers. This new departure of not exhibiting *en masse* the whole of one country's products in a separate section makes it all the more incumbent upon British merchants to strain every nerve to show their very best commodities of all kinds. Great Britain can no longer afford not to make every effort to maintain in the eyes of her foreign customers a "graphic" representation—such as that available at the Paris Exhibition—of her twentieth-century capabilities of production, which are greater than the German, and which ought to be forcibly driven home to some minds that are beginning to doubt the fact. If this is not done in 1900 at Paris, such a splendid and public opportunity of doing it effectually will not soon occur again, and ground once lost is not easily regained.

ANGLO-GERMAN COMMERCIAL RELATIONS.

Though the general commercial relations of Germany with foreign powers is too large a subject to include here, it is necessary to explain shortly the position in which the United Kingdom (including her colonies and possessions) now stands as regards the German Empire. The commercial relations of the two countries had been governed ever since 1865 by the commercial treaty with the "Zollverein," dated May 30 of that year. Another treaty of navigation with Prussia of August 16, 1865, ran concurrently with it, as was provided for by a special clause.

It was not until July 30, 1897, that Her Majesty's Government notified the German Government (in accordance with the clause allowing of termination at one year's notice on either side) of their decision to cancel the commercial treaty at the expiration of one year from that date. As is well known this step was taken in order to enable Canada, and any other British colonies so disposed, to grant preferential customs treatment to Great Britain. By the two commercial treaties then existing with Germany and Belgium it was impossible to do this, as both those countries, under the said treaties, could claim an equally privileged treatment for their imports into British colonies. The notice to terminate the 1865 treaty entailed the similar cessation of the treaty of navigation with Prussia. Both, therefore, expired concurrently on July 30, 1898. The tariff treatment enjoyed by British goods at the present moment is founded on the law dated May 11, 1898, which the Reichstag passed just before the end of their session, empowering the Federal Council (Bundesrath) at its discretion to grant up to July 30, 1899, to the subjects and products of the United Kingdom and of British colonies and possessions those advantages which should be conferred by the German Empire on the subjects and products of the most favored nation.

This law was necessary in order to enable the Government to deal temporarily with the Anglo-German commercial relations during the long interval of probably six months before the reassembling of the Reichstag in the late autumn of 1898. This power could not be obtained constitutionally without the authority of that legislative body in the form of a law; and had it not passed the relations of the two countries would have remained, after July 30, 1898, unregulated by treaty in matters of commerce and navigation generally. Such a state of affairs could not, under any circumstances, have been altered until the Reichstag had reassembled. But the Bundesrath decided, in view of the immense importance of the international trade of the two countries, to make use of their power. On June 11, 1898, they therefore issued an official notice (*Bekanntmachung*) which announced that they had resolved "to accord from July 30, 1897, and 'until further notice,' to the subjects and products of the United Kingdom and of all her colonies and possessions—with the one exception of Canada—those advantages which are granted by the German Empire to the subjects and products of the most favored nation."

By this arrangement—which it will be noticed can be terminated at the discretion of the Bundesrath at any time, and which can not (under the law of May 11, 1898) be prolonged beyond July 30, 1899—a prolongation of our old rights to most-favored-nation treatment (under the 1865 treaty) is temporarily secured. Meanwhile, negotiations between the two Governments for a new treaty are proceeding.

RECENT GERMAN LEGISLATION.

In quite recent years much has been done by legislation to unify the laws of the different federated States, such as the new civil and commercial codes. Many other laws of importance for the consolidation or commercial development of the Empire have been passed, which can not be dealt with here. Such are the laws regulating the organization, powers, elections, etc., of chambers of commerce, land registration, the organization of handicrafts, etc., all passed in 1897.

QUESTIONS UNTOUCHED IN THIS REPORT.

In the present report only the general and broad indications of development are dealt with. No single trades or industries, with the one exception of shipbuilding, are touched upon, as such subjects would too widely extend its limits; but it may be remarked that in most of them the development has been quite exceptional, especially in all branches of electrical work and in the chemical industries.

The great questions of technical education, of comparative wages, of the methods of British trade as compared with those of Germany, of the comparative cost of production, etc., are omitted here for want of space.

Finally, before passing to a review of the special spheres of development treated of here, it may be stated that, from a financial point of view, the state of the Empire is and has been most satisfactory, as may be seen by a perusal of the many diplomatic reports published in late years, and it seems probable that this prosperity will steadily continue.

B.—COMMERCIAL AND INDUSTRIAL INTERESTS.

CAUSES OF COMMERCIAL PROGRESS.

The rise of Germany as a commercial and industrial nation has been rapid, and it has been due not only to wonderful private activity but also to the public care of the state for every form of development of national interests. Both have played an important part in the attainment of the country's present prosperity; together they have now brought the Empire to the very foremost rank of commercial powers. Many circumstances have helped to bring about this advantageous result. But none have had a greater influence than the uninterrupted period of more than twenty-seven years of peace which have now gone by since the signing of the preliminaries of peace with France at Versailles in February, 1871. Moreover, the economic development of Germany had been long delayed by the want of a union of German states, which would carry with it also a consolidation of commercial, industrial, and traffic interests. This difficulty was eliminated from the impediments to national progress by the foundation of the German Empire.

In spite of the burden entailed on the nation by the enormous expense of the maintenance of a large standing army the progress made in all directions has been extraordinary. A great impetus was also given to the development of trade by the final inclusion in 1889 of the state of Hamburg (which, however, still keeps a "free harbor" district for customs purposes) in the "Zollverein" as an integral commercial part of the Empire from which it had held apart up to that year. It is true it had joined the North German Confederation in 1866, and the Empire in 1871 politically; but it had then retained all its privileges as a free port, which were not given up till seventeen years later. Bremen was also admitted in 1888. Thus as regards commercial absorption into the "Zollverein," the last two of the famous Hanse Towns joined the new Imperial Federation of German States, as the others had already done. It may therefore be said that the commercial unity of the Empire was completed in 1888, even as its political unity had been consummated in 1871. There are still, as is well known, a few "Zollauschlüsse," that is, territories outside the customs union limits of the Empire; but they are unimportant, except the free harbor district at Hamburg. The rest consists of docks and tidal basins at Bremen, Cuxhafen, Bremerhafen, and Geestemünde, of certain small parts of Baden, and of Heligoland. A free harbor district at Stettin must be included from October, 1898. Brake and Nordenhamm have only bonded warehouses, which are regarded as "Zollauschlüsse" for customs purposes.

TARIFF POLICY SINCE 1871.

German commercial policy has altered with the various disturbing influences of this century. Since the original "Zollverein," or Customs Union, was founded by Prussia in 1818, and gradually joined by nearly all the then German states, except Austria, a determined attempt was made to adopt so-called "free-trade" principles, which meant, however, real free trade only between German states in the Union, and a greatly facilitated commerce with other countries by mutual tariff concessions, effected by treaties. In 1862 Bismarck effected a considerable change in the Prussian tariff in the direction of such "free trade" by the commercial treaty with France. In 1873 he pushed the principle farther; and he actually suggested that the number of dutiable imports should be limited to 10 to 15, being a smaller number than there are now in England. He eventually obtained, on January 1, 1877, the

suspension of the duties on imported iron, and thereby brought free-trade principles to the highest point they have ever reached in Germany. The nearest approach was thus made to the English principle of levying duties merely for revenue and not for protective purposes.

But very soon afterwards a complete change of policy was suddenly made in consequence of a general European economic crisis, and of the overwhelming importation of foreign grains, the evil effects of which on home growers were ascribed to the adoption of the too "free-trade" principles of former years. Bismarck, himself, on December 15, 1878, informed the Federal Council (Bundesrath) of the intended complete change in customs policy, which would, he said, on account of financial considerations, for the future be directed to fostering German products by protective duties on nearly all imports, but which would also admit, free of duty, all raw materials necessary to the home industries. This newly adopted principle was called the "autonomous" system, and it has been in operation ever since.

The fact was that both agriculture and industry had been suffering severely from foreign competition, and their representatives jointly prevailed upon the Government to espouse their cause, which, at that time, was a common one, though, since then, it has become more and more divergent through the completely altered conditions which have necessarily arisen from the daily increasing preponderance of industrial over agricultural interests.

The new customs tariff of July 15, 1879, exhibited the following characteristics: An increase of the existing duties and the introduction of new protective duties in the interests of industrial and agricultural products.

The present German tariff is moderate, very simply constructed in comparison with those of some other continental powers, but is well able to accomplish its object of conferring upon national industries and undertakings sufficient protection from foreign competition where it is thought necessary. At the same time it merely gives the producer a small advantage in the home markets, and does not appear to any appreciable extent to impair his natural activity in competition, nor to prevent his using every effort to keep down the cost of production and every other expense incidental to a keen struggle for the markets of the world. But this protection also affords him the following substantial advantage in competing abroad with a country like Great Britain, which does not by protective duties afford to home industries both "initial" and continuous protection as Germany does. In consequence of the higher price, rendered possible at home from the protective duty, the German manufacturer can afford to sell abroad the surplus of his output at a lower price than he could otherwise do. His average profit on his whole output is made up of two parts: Firstly, of a rather high profit on the sales in Germany; and, secondly, of a rather low profit on the sales abroad. The net average profit is, however, only an ordinary one; but the larger total quantity sold (which he could not dispose of without the foreign market, combined with the extra low price of sale abroad) enables him to produce the commodity in the larger quantities at a lower cost of production than he otherwise could if he had only the German market to manufacture for. He thereby obtains abroad, when selling against an Englishman, an indirect advantage from his home protection, which stands him in good stead and is equivalent to a small indirect benefit (which the Englishman has not) on his foreign sales, which is, however, paid for by the German consumer through the higher sale price at home.

The customs tariff now in force provides one general or "autonomous" rate of duty for all countries, from which deviations only exist for such nations as have tariff treaties or treaties containing the most-favored-nation clause. Such deviations are "treaty" or "conventional" duties. At the present moment treaties of one kind or another exist with most European powers (excepting Great Britain, Spain, and Portugal) and with the majority of extra-European countries. So that, with few exceptions, the German Empire may now be said to trade with the world on the basis of the lower "conventional" or "treaty" tariff.

Should, however, any nation neither have a tariff treaty with Germany nor a most-favored-nation right, and should it treat "German ships or products less favorably than those of other states," then the imports from such a country may be charged with a surtax which may amount to 100 per cent of the "autonomous" tariff rate; and, in addition, those imports free of all duty under the "autonomous" tariff may be charged with a duty not exceeding 20 per cent ad valorem. This law is dated May 18, 1895. Hence the danger of any country not having with Germany either a tariff or a most-favored-nation treaty.

THE TARIFF TREATIES OF THE NINETIES.

After the introduction of the 1879 custom duties, tariff treaties with foreign countries were not general until the much later period of the nineties. There were at that time usually only treaties containing a most-favored-nation right, three exceptions being those with Italy, Spain, and Greece. But most of the tariff treaties existing in Europe expired early in 1892, whereupon many countries prepared higher customs tariffs in order to be prepared to grant certain concessions reciprocally when negotiating for the new treaties. Germany, therefore, under the auspices of General Caprivi, set to work to make a series of special tariff treaties with Belgium, Italy, Austria-Hungary, and Switzerland, which were all dated December 6, 1891. Later additions of the same class were those with Servia in 1892, with Roumania in 1893, and with Russia in 1894.

Perhaps almost the greatest benefit conferred upon the country by these seven tariff treaties was the fact of their all being made for a long period of years and not terminable in any event before December 31, 1903. This secured for the mercantile classes the inestimable benefit of a fixed tariff for most of the important commodities of commerce over a long period of time—a very valuable factor in trade, which has in this case greatly assisted the development of commerce.

The reductions in Germany granted by these treaties were not great except on imported grains, and those in the various foreign countries were not very considerable either. But the whole of the negotiations were based on the necessity of finding larger markets for the rapid increase of industrial products, which had taken place at home and for which there was no longer in the country itself a sufficiently extended market. The chief compensation given to foreign nations was found in a reduction of the German duties on grain, which at the same time benefited the masses of the working people by affording them cheaper breadstuffs. On the whole, these treaties seem to have satisfactorily effected their purpose of disposing abroad of the surplus products of the greatly increased activity of all commercial and industrial undertakings.

It is contended that these commercial treaties, the work of General Caprivi and Baron von Marschall, can hardly be called strictly protective, inasmuch as their main object was to secure cheaply as imports the necessities of life and of the raw materials for industries, in return for which concessions foreign markets were secured for certain classes of German exported industrial products. A policy embracing these principles is still considered to be necessary to the German Empire in order to support its rapidly growing population, which is now increasing at the rate of 600,000 a year.

PROSPERITY OF GERMAN COMMERCE.

The prosperity of commercial and industrial interests has been great, and may be said to be the direct and joint achievement of the eminently satisfactory condition in Germany of the methods of education, of production, and of distribution. It would seem as if the success of the Germans in competing in trade and industry with foreign nations must be largely attributed to a distinct superiority in special points under these three heads, although the general economic conditions of the world and long periods of international peace and amity have undoubtedly helped to elevate Germany to its present prominent position.

Her commerce, like that of other countries, has passed through occasional years of depression; but, unlike that of other nations, it was never as seriously affected. As I was recently able to point out in a comparison of the trade of the chief nations of the world from 1885 to 1895, the position of German commerce during that period was in an incomparably better position than that of Great Britain and of most other European powers. And it was there pointed out how that trade, even from 1890 to 1895, and, therefore, covering some years of general depression, had been much more prosperous than British trade, especially to extra-European states.

Particular attention should also be paid to the rapidly increasing amount of German capital invested abroad. The financial interests of the Empire, especially in South America, are immense; but it is not possible to satisfactorily estimate the total amounts. In banking circles foreign loans, such as those to China and Denmark, and even to Bosnia, have been much in favor; and large sums have been sent to Russia, Hungary, and Roumania. In some quarters it is thought that German capital has lately been too freely granted to foreign countries at low interest, and the fact that the interest charged to the Chinese Government has, in late years, been reduced from 6 to 4½ per cent is much commented upon.

The new departure of Germany in acquiring Kiaochao Bay a year ago, now made a free port, is an important fact commercially for the development of trade with the East, which has lately been a special subject of care to the Government. They, two years ago, sent out a commercial mission to China and Japan, which recently brought back valuable information and samples regarding suitable goods for sale there. These data and sample collection are being kept secret for the especial benefit of the German manufacturers producing such commodities. The minister of commerce has also recently communicated to the interested classes a lengthy memorandum, which deals with German exportation to China. It gives the results of a detailed examination of Chinese statistics, made with the view of placing before German merchants lists of all the chief imports into China which could be supplied from Germany; and it contains many valuable hints and suggestions, derived from authoritative sources, which are likely to assist the public in obtaining reliable information on the conditions of the markets in that part of the world. In connection with it, a collection of Chinese sample goods is now being exhibited to manufacturers.

ACTUAL DEVELOPMENT OF TRADE, 1889-1897.

On turning to the actual figures for commerce since the foundation of the Empire, a notable expansion is seen. In 1872 the total "special" trade was valued at £279,131,000, being £163,100,000 for imports and £116,031,000 for exports; but it must be remembered the trade of Hamburg and Bremen was not included at that date. And, owing to various breaks in the continuity of statistics (as is explained in the body of this report, in Part II), the

longest period of consecutive and strictly comparable years is that from 1889 to 1896, from a statement illustrating the nation's progress in recent years.

In 1889 the total "special" trade was £359,090,000, being £200,755,000 for imports for home consumption and £158,335,000 for exports of domestic produce. By 1896 it had become a total of £405,483,550, being £229,453,350 for imports and £176,030,200 for exports. A marked feature of this development was the decrease in value of imported foreign manufactured articles from £49,635,000 to £46,960,000, while the exportation of German manufactures rose from £104,935,000 to £115,060,000. Statistics do not show, in addition, the value of German manufactured products consumed at home by the population, which had, during that period, grown by about £4,000,000. The great increase in imports was mainly in food stuffs, drawn chiefly from the United States, Russia, and Austria-Hungary—all important grain-growing countries. The largest decreases in imports were from the leading industrial and manufacturing nations. With regard to Great Britain, the loss in value of her imports into Germany during the seven years was £5,696,200. As regards Germany's exports, there were only three small reductions in that period, namely, to Italy, to the United States, and to France; whereas the value of the increase of exports stands at £15,779,500—chiefly to Austria-Hungary, Switzerland, Great Britain, and Russia.

German trade with all the British colonies and possessions in 1889 was valued at £11,182,900, being £7,518,600 for imports from and £3,664,300 for exports to them. In 1896 it stood at £20,801,750, being £15,276,700 for imports from and £5,525,050 for exports to them. The imports from the colonies consist almost entirely of raw materials necessary to German industries.

In 1896, according to German statistics, the value of the international "special" trade of the two Empires with one another—that is, of Great Britain and her colonies and possessions on the one side and Germany on the other—was almost the same, the difference being merely one of £1,677,500. The imports from the British Empire amounted to £42,842,350, as against a value of £41,164,850 for exports to it from the German Empire.

A comparison of the total "special" trade of the United Kingdom and Germany in the three years 1895–1897 (after due allowance for the changes in statistics on January 1, 1897) shows the following results: For England there are in 1896 and 1897 rises in the value of imports of £28,827,954 and £6,063,265, and in exports an increase of £14,255,535 in the former year and a decrease of £5,925,843 in the latter. For the Germans are found, in those years, increased imports of £9,324,706 and £14,095,194, and for exports a rise of £10,361,500 in 1896, but a slight fall of £226,300 in 1897. The net results of this comparison of the total exports of the two countries is, therefore, in 1897, a balance of £5,699,543 (being £5,925,843 as compared with £226,300) in favor of Germany on that year's transactions. But this was owing almost entirely to the English loss of £5,248,000 in "cotton and cotton goods" in that year, a very large part of which was caused by the severe fall in price for the enormous British exports of that commodity.

C.—MARITIME INTERESTS.

THE RISE OF MARITIME INTERESTS.

Among the many directions in which the German Empire has been pushing its economic expansion as a powerful European State in recent years, none is more remarkable than the line of development of its maritime interests, in the broad sense of the term, which includes shipbuilding, carrying power, and oversea commerce, together with its necessary protection as represented by a navy. Sea interests and sea power are the natural correlaries of trade interests and industrial power; and they to-day take a leading place in German politics, whereas up to quite recent times they were of very secondary importance to politicians, and still less to the nation at large.

DEVELOPMENT OF SHIPBUILDING AND STATE AID.

It is, however, only since 1881 that, moved by national considerations, the German Government decided to foster the growth of shipbuilding; but the intention to do so did not take practical shape until the first subsidy bill of 1885. By this action they afforded material support to the colonial and commercial aspirations of the Empire. Though the principle then laid down has since been extended, it is almost entirely due to the energy of private individuals that such a high level of efficiency in this direction has been attained, that at the present time the German shipbuilding yards have been offered more orders than they can possibly carry out.

There are now being constructed for the Hamburg-American Steamship Company fourteen new large ships of 144,980 tons, and a further nine of a tonnage of 78,380 tons are building for the North-German Lloyd. Together, therefore, the immense total of 223,360 tons of shipbuilding are now being built for these two companies, of which all but four ships of 34,360 tons are laid down in German yards. And it is not only magnificent merchant shipping that has been and is being constructed, but also large numbers of men-of-war, both for the German navy and for foreign nations. In 1897 as many as eight were launched.

The German Government has not, however, largely subsidized or assisted the construction of ships, as has been the case in other countries. They have merely followed out their usual policy of affording a very moderate amount of protection to the young or struggling home industry, in order to enable it to have a fair chance of com-

peting with already existing foreign competitors. The most important form of subsidy is by postal contracts for mail services by quick steamers, though it is frankly acknowledged that other important objects are kept in view throughout, such as the indirect advantages that would accrue to German trade, the gain to the Empire by the increase of material for forming an efficient naval reserve, the utilization of the fast steamers as cruisers in time of war, and last, but not least, the coveted means of favoring home industries. Conformity with admiralty requirements, the use of German materials and products as far as possible (including coal), and the construction of the new vessels in the shipbuilding yards of the Empire, are among the chief conditions of contract.

BRITISH AND GERMAN MAIL SUBSIDIES COMPARED.

These subsidies, which are only enjoyed by two steamship lines—the North-German Lloyd and the East-African Line—amount at the present time to £324,560 a year for direct postal subsidies and to £19,250 for other separate payments for carriage of mail bags chiefly, to North America, by lines other than the two above mentioned. The total expenditure is, therefore, £343,750 a year in Germany; whereas the similar postal subsidies paid to British companies amount to £653,276 this year, and the sum expended by Her Majesty's Government for the right to use certain fast steamers as cruisers, in case of naval warfare, amounts to an additional £48,600 yearly. No such payments are made by the German Government to any of their lines of steamers, even when the ships are built on admiralty lines. But they can be requisitioned under the law of June 13, 1873, for war purposes. To other German shipping companies, of which there are many, nothing is paid to assist their development, but they may occasionally receive payment for single mail bags carried out of the above-mentioned small sum.

“PREFERENTIAL” RAILWAY RATES FOR MATERIALS FOR SHIPBUILDING.

There are, however, two other forms of assistance given, of which “preferential,” or “special,” railway freights for certain German materials for shipbuilding are the most important, inasmuch as their direct object is to oust the products of rival industrial countries. This principle has been recently further extended in consequence of a direct combination of the leading shipbuilders and iron and steel works owners, who have obtained from the State railways still further freight concessions for such materials. The other form of aid is that certain specified articles and requisites for the fitting out of ships are admitted duty free under various decrees. These at present benefit the foreigner.

A small indirect bounty on shipping is also afforded by the very low combined freight rates by rail and sea from inland parts of the Empire, via Hamburg, to ports in the Levant and East Africa, which induces shipment by two German steamer lines in preference to transport by other lines.

THE FUTURE OF SHIPBUILDING.

But, independently of this artificial stimulus, the progress of shipbuilding is yearly receiving greater encouragement from the daily increasing improvement in methods of production and from the gradually extending facilities of carriage, which are the natural results of the industrial and commercial prosperity. The new Dortmund-Ems Canal will enable a cheaper transport of Westphalian coal and iron to the seaports, and it will thereby benefit the employment of home products, to the exclusion of foreign goods, in the construction of ships. And the further projected extension of the already extensive network of canals, at a cost, it is said, of perhaps £20,000,000, for a midland and other branch canals, joining from east to west the chief rivers of Germany, will certainly add to the possibilities of providing at a cheaper price the materials necessary for shipbuilding, now one of the most important national industries. The immense development of this industry is, be it noticed, almost entirely confined to steam tonnage. The large falling off in the sailing tonnage of the German mercantile marine is considered to be unsatisfactory from the point of view of training crews for sea service, and it is partly on account of this consideration that the Government now do a great deal to develop the fishing fleets of the Baltic and North Sea.

The iron and steel industries have now attained great proficiency in every kind of production, and are daily advancing further their standard of work. Aided by the Government, they will, probably, soon reach the point at which they can supply all the materials which are still coming from the United Kingdom for the construction of ships. A characteristic sign of the times is the fact that Krupp, the famous maker of ordnance, has recently acquired the “Germania” shipbuilding yard at Kiel, whereby he will be able to turn out men-of-war, complete throughout with fittings and armaments, all “made in Germany.”

BRITISH PROSPECTS OF CONTINUING TO SUPPLY MATERIALS FOR SHIPBUILDING TO GERMAN YARDS.

Though the position of shipbuilding in Germany is most satisfactory, and has received an unexpected impetus from the passing of the naval bill in the spring of 1898, which authorized an expenditure of large sums on new men-of-war during the next six years, yet the Germans themselves acknowledge that they are still behind Great

Britain in some respects, and must not, on any account, rest on the laurels already won. Therefore a keener competition than ever must be expected by the British public in every branch of trade connected with shipbuilding, as, indeed, in all the metal trades. One of the advantages that has hitherto told in favor of the English manufacturers of some materials required in the construction of ships is the more rapid delivery orders and the cheaper price. The great struggle on the German side has been to equal this promptness in the execution of orders and to bring down the price. These objects are, no doubt, being yearly more nearly attained. Consequently it is of vital importance that English manufacturers should take far more care than ever before to maintain these two gradually diminishing advantages in competing with similar German products.

There is also a general conviction among Germans, which will have far-reaching and decidedly disadvantageous results in the course of years to English competition, that the condition of shipbuilding will only become quite satisfactory when the materials employed are exclusively of German production and manufacture.

In conclusion, it will be instructive to submit here two recent proofs of the very high standard of production now obtaining in the German Empire:

First, during October of this year, the "Schichau" Yard at Elbing (near Danzig) achieved the feat of building several torpedo destroyers of 280 tons and of 6,000 horsepower, which, it is reported, on their trial trips gave a speed of $40\frac{1}{2}$ miles (or 65 kilometers) an hour, a speed, it is believed, hitherto unequalled.

Secondly, an instance of good workmanship is afforded by the fact that, also during October, 1898, at a trial range near Washington, it was proved, on the occasion of trials of heavy armor plates to be used for new United States men-of-war, that those manufactured by Krupp's new method were superior to Harvey's, with which the ironclads of the United States are now armed. Projectiles which pierced a harveyized 6-inch plate failed to penetrate Krupp's plate. And the opinion was expressed that a Krupp 12-inch plate was equal to any other armor plate of $13\frac{1}{2}$ inches in thickness.

THE NAVY BILL OF 1898, AND REASONS FOR ITS INTRODUCTION.

One of the most important economic movements now taking place in Germany is the development of her maritime interests. The mercantile marine and "over-sea" interests had developed to such an extent that recently the Government obtained the consent of the nation to add largely to its navy.

During the year 1897 continuous efforts had been made to bring this question prominently before the public, and to point out the absolute necessity of a large increase of the navy in order to adequately protect Germany's growing maritime interests. The introductory statement of the bill presented to the Reichstag in November gave great prominence to the following considerations of general interest in connection with the new programme, namely, that during the last twenty years the increase of imports and exports, the rapid investment of capital abroad, the acquisition of colonies, the flourishing fisheries, and the rapidly-increasing population had greatly added to German "over-sea" interests, but that at the same time this expansion had brought with it the danger of a conflict with the interests of foreign nations, which must be provided against by an increase of the navy, for any injury to these maritime interests would entail serious consequences on the whole country.

THE FINANCIAL EXPENDITURE SANCTIONED FOR THE INCREASE OF THE NAVY.

The bill, as eventually passed on April 10, 1898, provided that the nonrecurring expenditure should not exceed £20,445,000, of which £17,835,000 was to be devoted to the construction of ships and their armaments. The German fleet will then be brought up to a total strength of 17 battle ships of the line, 8 coast-defense vessels, 9 large and 26 small cruisers, besides a variety of torpedo and other small craft. It is thought and hoped that, in consequence of the favorable state of the revenues of the Empire, a total sum of £5,876,274 a year can easily be devoted exclusively to the annual naval budget of the next six years, by which time the additions to the fleet are to be completed.

THE MATERIAL BENEFITS TO THE NATION BY THE INCREASE OF THE NAVY.

At the end of 1903 some £35,000,000 will probably have been expended; but in return it is contended that Germany will be in the strong position of being able to prevent any effective blockade of its coasts, which, by excluding neutral ships, would be disastrous to the nation in time of warfare. And in times of peace there will be a very material addition of naval power, which can be exerted in different parts of the world in extending German influence and in protecting German interests.

It must also be remembered that, with a population increasing at the rate of 600,000 a year, it is absolutely necessary, from a German point of view, to provide security in the future for uninterrupted importation and exportation, for that increase in numbers can only be supported by the productiveness of industries for the very existence of which continuous imports of food and of raw material, as well as regular exports of manufactures, are absolutely essential in order to uphold the vitality of the nation.

D.—TRAFFIC INTERESTS.

DEVELOPMENT AND CAPABILITIES OF TRAFFIC.

The growth of traffic by land and sea has been remarkable since 1871, and nothing affords a better insight into German development. Probably few countries have shown such a rapid development of carrying power. The capabilities of inland traffic in Germany may be gathered from the statement that the country possesses 28,566 miles of broad-gauge railways and 8,647 of navigable, natural, and artificial waterways. Both these branches of traffic have been energetically developed by the Government, especially since the political union of the German States in 1866, under the leadership of Prussia. Previous to that date there was no mutually worked-out scheme either of waterways or railways. Each State of the old Germanic Confederation had worked more or less independently in these matters; and with the foundation of the German Empire in 1871 still further facilities for a uniform development of means of transport were secured.

The German Government has systematically tried to establish in the country a combined network of waterways and railways; and they have recognized the practicability of both working well together, the canals taking the bulky part of the heavy traffic which does not require rapid transport. As a result of these endeavors it is now specially claimed that nearly all the waterways of Germany have been rendered available for steamers, which is a most important point for modern traffic requirements. Without it canals are nowadays comparatively of little use.

CANALS AND RAILWAYS IN GERMANY ARE BOTH STATE UNDERTAKINGS.

There is a striking contrast, which is most characteristic of the two countries, between the way in which the network of canals arose in Great Britain and in Germany. In the former it was the result of purely private or individual efforts, whereas in the latter it has throughout been the outcome of State or public enterprise. And the same may be said of the railways since 1879.

In the German Empire both are equally great State undertakings; and it is a recognized principle that their care and development is one of the most important functions of both the Imperial and of the Federated State Governments, who, working in unison, devote to these special objects all their energies and, what is more to the point, enormous sums of public moneys.

On consulting the map of Germany one is much struck by the great facilities of water carriage with which she is favored. There is a very long seacoast, and a river and canal length of about 8,647 miles, of which one half consists of canals or canalized streams. In the United Kingdom there is also a large canal system of long standing, but with this great difference, that few of the canals are available for steamers, while the contrary is the case in Germany. Statistics (latest returns, 1888) allot to England 3,827 miles of canals.

DEVELOPMENT OF WATERWAYS—EXPENDITURE ON CANALS.

In the past immense sums have been spent on the German canals and on the canalization of rivers, and it seems likely that still larger amounts will be expended in the near future on extending the waterways. The sums allotted by Prussia for the creation of new or for the improvement of existing water communications during the period 1850-81 to 1892-93 amounted to £17,875,350, some of which has not yet been actually expended. There are other large sums involved since that date in incompleting canals.

PROJECTED NEW CANALS.

Of new projects there are many, of which the Dortmund-Rhine Canal and the Great Midland Canal (joining from the east to west the rivers Elbe, Weser, and Rhine) are the most important. The first involves an expenditure of over £8,000,000 altogether, and the second is variously estimated at from £10,000,000 to £20,000,000, according to its eventual scope. The latter is intended to amalgamate the eastern and western waterways of the nation and to join the Dortmund-Ems Canal *a* to the Rhine system, in order to give the latter river an outlet to the sea via a German port, instead of only through ports in the Netherlands. It will also place the Rhine-Main-Danube connection in direct communication with all the streams of North Germany.

Indications are not wanting to show that a greater effort than ever before will soon be made to further extend the waterways of Germany, among which may be mentioned the declaration of the minister of agriculture that the building of canals forms a part of his policy and the statement of the minister of public works that the assistance of the canals was absolutely necessary to the railways in order to be able to deal satisfactorily with the enormously increasing traffic.

a This canal has been building for some time, and it is hoped that its entire length (650 kiloms.) will be open for navigation in the spring or summer of 1899.

IDEA OF A MID-EUROPEAN CANAL JOINING RHINE, ELBE, AND ODER TO THE DANUBE.

A far-reaching scheme of international importance is also advocated by an "Austro-German Society of Inland Waterways," and consists in the construction of a mid-European canal, which is intended to connect, by good, navigable canals, the Rhine, Elbe, and Oder with the Danube, and with perhaps a branch to join the Russian canal system. It is pointed out that the opening of the Iron Gates to shipping removed the great impediment which formerly existed to an extensive mid-European system of through water traffic. The vista thus opened up of future possibilities to the advantage of central Europe is immense, and is a marked contrast to the idea that canals are rather things of the past than effective factors in the future for the quickening of a country's economic development.

ATTITUDE OF AGRICULTURISTS AND INDUSTRIALISTS TOWARD CANALS.

The attitude adopted by the partisans of agriculture and industry, as regards canals, has been widely divergent. The agricultural party, generally, are opposed to the extension of the waterways on the ground that, although directly benefiting grain growers in the country by a cheaper carriage, it must in most cases also cheapen the transport of the inevitably large imports of foreign corn which enter the German Empire, thereby lowering the home prices to the general detriment of the home producers. And it must be remembered that, at any rate until the expiration, at the end of 1903, of the principal tariff treaties of the Empire with foreign Powers, the German Government could not raise the import duties on grains so as in any way to compensate the agriculturists for any loss incurred.

The much larger number of persons, however, whose interests lie in the great industries are naturally strongly in favor of improved and extended waterways, for such improved communications would further lower the cost of transport from the coast inland of the raw materials required for the industries and also the outward transport of the finished products of those industries. Moreover, they have not to face the same danger as the agriculturists; for such raw materials as come from abroad are, as a recognized principle, usually admitted duty free, and of finished manufactures, the exactly similar foreign imports are not so very numerous, and those that are have to pay, on entry, a duty high enough to protect the German industries effectively from any serious competition.

Such an extension of the radius of cheaper water communications in Germany will also further facilitate the exportation of industrial and mining products, principally coal, which will inevitably result in still keener competition with British similar commodities both in Germany and abroad in the markets of the world.

THE INTRODUCTION OF STATE RAILWAYS ON THE CONTINENT.

In view of the very important part played by German State railways and on account of the amount of attention that this question has recently received in England, a somewhat detailed account of its adoption, working, and results is given in Part II of this report.

It was in 1879, three years subsequent to the completion of Bismarck's imperial railway scheme, that Prussia finally adopted the system of State railways as now understood by that term; and by doing so she set an example that was soon followed by other countries. The continental nations, like Great Britain, began with private railway companies; but, unlike her, they have mostly altered their views for various reasons.

REASONS FOR ESTABLISHING STATE RAILWAYS.

In Germany the change to State lines was not only brought about by political and, especially, by strategical reasons, but also by the firm conviction that such a system was absolutely needed in order to give full scope to the aspirations of a new commercial and industrial German Empire. And it must be said that Bismarck's railway policy, during the twenty years of its existence, has had an enormous success both as regards the development of the network of the lines themselves and with respect to the marvelous effect that they, in conjunction with other economic factors, have had on the expansion of commerce and industries.

The State railway system has this great advantage over private companies in developing the country's resources, that those places which would be left without means of transport by the latter system are not so left by the former; for the paying portion of the lines worked by the Government compensate for the nonremunerative sections, and the public generally benefit considerably. One of the principal objects aimed at was a simplification of freights, together with greater uniformity and cheapness.

A monopoly of the magnitude of the German State railways, extending over 29,384 miles of lines, has an immense power over the destinies of a country from many points of view. And when one also considers the State ownership of 8,647 miles of canals and other inland waterways, the power that can effectively be wielded for the common good of the nation can be to some extent realized.

SO-CALLED "PREFERENTIAL" RAILWAY RATES AND THE REASONS FOR THEIR INTRODUCTION.

One very useful application of this power is to be found in the so-called "preferential," but better termed "exceptional" or "differential," railway tariffs, which imply specially reduced rates for particular kinds of goods with often certain limitations as to destination. The Prussian minister of public works, in October, 1884, stated that the objects of such reduced freight had been and in the future would be the following:

1. To assist agriculture and industries by granting low rates of transport for raw materials or "subsidiary" materials.
2. To assist German manufacturers in competition with foreign importers at home, and to assist German export trade abroad.
3. To assist German ports in competition with foreign ports.
4. To look after the interests of German railways and waterways in competition with those of foreign nations.

Moreover, he added that these "exceptional" tariffs would only be granted to foreign goods if no injury could thereby result to a home competing industry or enterprise, or if, by being so admitted and yet causing some injury, there were nevertheless some compensating advantages on the German side. Under the latter head were included the "interests of German shipping, those of the home consumer, and those of the railways themselves."

This power has been widely used in all the directions indicated to promote the productive power of the Empire, as well as its maritime and commercial interests.

RESULTS OF THE WORKING OF THE STATE RAILWAYS.

It is but fair to add, however, that up to the present time Germany has worked the State railways generally (apart, perhaps, from some "preferential" rates) on strictly business lines, and many people hold the opinion that extreme "preferential" rates would not be granted to any kind of goods if they involved a serious reduction in income, for it should be remembered that the surplus yield of these railways is one of the chief sources of revenue to the German State which, from a financial point of view, effected an excellent piece of business by converting the railways into State lines, as also by subsequently reducing the rate of interest on the railway loans from $4\frac{1}{2}$ per cent to 4 per cent and to $3\frac{1}{2}$ per cent. The actual capital expended on the broad-gauge system up to 1896-97 was £580,186,600, or about £20,310 per mile. In 1897 the gross receipts were £79,399,850, the working expenses stood at £44,209,500, and the excess of the former over the total expenditure was £35,190,350, or a return of $6\frac{3}{4}$ per cent on the invested capital. The Prussian railway debt for purchasing private lines in order to establish the State system had been £351,183,539 altogether.

Notwithstanding the many concessions already made by the state railways administration, it appears that some leading commercial and industrial men are of opinion that the general railway rates are not yet low enough to give full play to the productive powers of the country, and that even with further reductions the profits might be still larger from the increased commercial and industrial activity that would probably ensue. And, in conclusion, it must be said that in Germany the system of state railways has been a great success.

THE DEVELOPMENT OF LIGHT RAILWAYS.

In contradistinction to the broad-gauge railways, which almost entirely now belong to the state, the light railways have always been and remain private enterprises, strongly supported by the agricultural party in Germany. That their efforts have been successful is shown by the fact that there are now 818½ miles of such lines in the Empire laid down at a total cost of £3,823,050, or about £4,670 per mile. None of these are state railways.

Under the Prussian laws they were expected to be built solely by private capital and with pecuniary assistance from various municipal associations ("Kommunalverbände"), though eventually in 1895 the Government came to their aid with funds from the railway budget because these "municipal" contributions were so small.

Up to the present £1,050,000 has been allotted by the Prussian state to further the construction of light railways where they are necessary, but only on condition of there being no reasonable prospect of private companies obtaining a fair return on the capital to be invested.

VIEWS OF THE AGRICULTURAL PARTY ON LIGHT RAILWAYS.

The agricultural party contend that these narrow-gauge lines are very necessary in developing the agricultural resources of the country, and should form an important part of home politics. They urge that to a great extent industries follow the broad-gauge railways, which is not possible in the case of agriculture, the products of which must be carried by light railways in order to quicken the latent possibilities of agriculture. They point out that the Government should well be able with such a profitable system of state lines to afford them assistance, although the yield of narrow gauges are small. They also contend that as the strategical interests are now fully secured by

the present extent of the broad-gauge system, a strong opposition should be directed by the agrarians against any further development in that direction; but that every effort, on the other hand, should be made by them to obtain an increase of the network of light railways through state assistance.

Part II.—1. COMMERCIAL AND INDUSTRIAL INTERESTS.

DEVELOPMENT OF COMMERCIAL INTERESTS.

Aided by the state and protected by a moderate tariff from severe foreign competition, German industries and commercial enterprises of all kinds came into existence, developed, and flourished. This took place much more rapidly than in most other countries, partly because when the opportunity came the Germans benefited by the knowledge and experience of older industrial states which they took care to study closely, and upon which they often improved.

PROTECTIVE TARIFF OF 1879, AND LATER HISTORY.

After a period of so-called "free-trade" principles, protection was again adopted in Germany with the introduction of the 1879 tariff, which effected many sweeping changes at the instance of both the agricultural and industrial parties. The grain and wood duties, abolished in 1864, were reintroduced, and a new petroleum duty was adopted. Those on coffee, wine, rice, tea, tobacco, cattle, and textiles were raised. Those on iron were restored; and others were placed on many new articles formerly admitted free. In 1885 the tariff was again revised, especially in the direction of trebling the grain and of doubling the wood duties. Those on cattle, brandy, etc., were raised at the same time. The year 1887 saw another general rise of duties. But, on the other hand, some reductions in the tariff for most-favored nations came about in 1883 and in 1889 in consequence of the tariff treaties made with Switzerland and Spain. Other reductions were made by the four tariff treaties of 1891 with Belgium, Italy, Austria-Hungary, and Switzerland, and again in 1892 and 1893, when like treaties were respectively made with Servia and Roumania. Increases in some duties took place in 1894 and 1895, such as those on cotton seeds, perfumes, ether, and honey.

Such, briefly, has been the history of the present tariff, which has, generally speaking, become more and more protective while making, in certain special cases, some reductions in consequence of the above-mentioned tariff treaties, which had also to be extended, by virtue of existing most-favored-nation treaties, also to most European and to many extra-European countries.

Difficulties often arise in individual states of the Empire as to the application of the general customs tariff. Each state has still full power to interpret its application, and divergent decisions may easily arise as to the duty applicable to any article not specifically described therein. It was partly on this account that, in February, 1898, new custom-house regulations were issued as to information to be given beforehand as to duties chargeable at each custom-house. This measure was adopted by the German Government as a palliative, as it was fully recognized that it was not possible to entirely abolish "customs anomalies," as they were called during a debate in the Reichstag, in which it was also stated that a wish had been expressed that questions arising from customs duties should be submitted for settlement to the law courts. This the Federated States could not allow, as it would only lead to still more divergent decisions. And it was stated that one single supreme court for the Empire, having jurisdiction in such cases, would be most desirable, but that so long as the present constitution held good each state had complete control over the collection of duties and the interpretation of the customs tariff. The only appeal against such decisions lies to the Bundesrath, or federal council, at which the representatives of each state sit. Negotiations have been attempted for the purpose of obtaining a supreme customs court for the Empire, but so far without success.

CONSTRUCTION OF PRESENT GERMAN TARIFF.

It will be well to describe shortly here the German tariff. It is not an excessive tariff; on the contrary, it is a moderate one, but effective enough in affording to the home producer ample protection against foreign competition, though this is not acknowledged by the agricultural section of the community. The principles of the present tariff have, as was mentioned above, been in force since 1879, since when, however, it has often been altered. The whole of it did not come into force at once, but only that part referring to certain classifications, such as iron, tools, etc. Special dates were fixed on which certain other parts were to be applied; and it was not until January 1, 1880, that the whole of the remainder became effective. A gradual transition was thus brought about from the former "free-trade" principles to protection.

All the duties are on imports; there are none on exports. The German tariff is an extremely simple one as compared with those of other countries on the Continent. There are 43 sections, and under each of these there are found a moderate number of subdivisions. Nearly all duties are calculated by weight; that is to say, at so

much per 100 kilos., gross or net, certain tare allowances being made for some goods, according to the nature of the packing. These allowances are placed opposite the duties in the tariff and are so much per cent of the gross weight.

"AUTONOMOUS" AND "TREATY" TARIFF DUTIES.

There is one fixed rate of duty, known as the "autonomous" or general tariff, for all countries, except for those which have direct tariff treaties with Germany, or which, by virtue of a most-favored-nation clause, indirectly enjoy the same privileged lower rates as those granted to tariff treaty countries. These lower duties, noted in the official tariff in italics, both for the article and the duty, form, however, a lower "treaty" or "conventional" tariff. Thus, though there is, properly speaking, no maximum and minimum tariff, it practically amounts to that as regards all goods mentioned in the tariff treaties, which only exist with the following countries: Greece (July 9, 1884); Belgium, Italy, and Austria-Hungary (all dated December 6, 1891); Switzerland (December 10, 1891); Servia (August 21, 1892); Roumania (October 21, 1893), and Russia (February 10, 1894). There is also a tariff treaty with Japan of April 4, 1896, which comes into force on January 1, 1899, for a period of twelve years certain, but in it no concessions are made by Germany.

But most-favored-nation treaties exist with all the other European countries, (a) except Great Britain (since July 30, 1898), Spain (since May, 1894), and Portugal (since February, 1892). With many extra-European countries most-favored-nation treaties also exist.

PREPARATIONS FOR THE 1904 NEW COMMERCIAL TREATIES.

The preparations for the negotiation of the new commercial treaties which are to replace those which expire on January 1, 1904, were begun in Germany as early as 1897. Immense trouble has been and is being taken by the Government to obtain thoroughly reliable data on which to work, as they were by no means content merely to elaborate a new tariff on the wide experience already gained from the working of the seven commercial treaties of 1891 to 1893. The steps taken to effect this end were as follows:

A special committee was established at the Treasury to draw up a freshly classified tariff so as to enable the Government, when negotiating with foreign countries for tariff treaties, to handle separately many of the articles now grouped under one single rate of duty. This preliminary work was partly completed in the last days of September, 1898; and the newly drawn up classifications were then sent out to the Federated States for their approval and suggestions before being submitted to the representatives of trade, industry, and agriculture for their views. No altered rates of duty whatever differing from the present tariff were then inserted, for they can not be fixed or even discussed until much later, when the Imperial Government shall be in possession of all the new material they are now collecting.

This committee consisted of 30 members, of whom 15 were nominated by the imperial chancellor and 5 each by the central corporations of German commerce, industry, and agriculture. One of their chief duties is to examine the possibilities of developing exportation and of substituting home products for imported articles, while according due regard to the ultimate effects economically, especially as regards the workman's necessities of life. Other special work for the use of this committee is also being carried out, such as a compilation of the commercial and navigation treaties from 1872 to 1897 (a volume of such treaties from 1851 to 1872 had already been published), a detailed comparison of German trade with other countries from 1880 to 1896, and a systematic compilation of the customs tariffs of all nations. Complete statistics on production in Germany, a work hitherto unaccomplished, are also being obtained for all branches of trade, and some of these seem to be approaching completion at the present time.

A private commercial information bureau in Berlin (called the "Centralstelle," for preparing data for the new treaties) has also started an organized system of collecting statistics, etc., with the object of assisting the Government. It published pamphlets written by able economists and others on different subjects connected with this work of drawing up the new treaties of 1904.

DEVELOPMENT OF GERMAN COMMERCE, 1871 TO 1896.

The development of German commerce since the foundation of the Empire in 1871 is now traced. The alterations that have taken place in statistics are explained in this account of trade as they occur in date. Total "general" trade is not dealt with, as it is thought more satisfactory to treat only of "special" commerce.

The total value of German trade in 1872 (i. e., of the Zollverein, but not at that date including Bremen and the greater part of the State of Hamburg and some other small portions of territory outside the customs union) was £279,131,000, or £163,100,000 for "special" imports and £116,031,000 for "special" exports. An earlier date can not be given for values, as prior to 1872 only quantities by weight of importation and exportation were given.

^a See Appendix, Annex No. 1, for complete statement of all treaties.

It will be remembered that "special" means, in the first case, imports for home consumption, and, in the second case, exports of domestic produce. In German statistics they include bullion and specie, which have been deducted in all figures quoted in this report in order to make them comparable with English statistics.

By 1887 "special" trade had risen to a total of £312,000,000, being £156,235,000 for imports and £155,765,000 for exports. It must, however, be noted that in 1880 considerable changes in the method of collecting statistics of imports and exports were made, so that exact comparisons with the early years of the Empire are not possible.

It is only since 1889, after the incorporation of Bremen and the greater part of the state of Hamburg into the "Zollverein," that correct comparisons can be made with trade in late years—that is, up to the end of 1896 only, for 1888 and 1897 form complete breaks in continuity.

In 1889 the total "special" trade was £359,090,000, being £200,755,000 for imports and £158,335,000 for exports. By 1896 it had become £371,930,000, or £206,035,000 for imports and £165,895,000 for exports.

Another complete break in continuity unfortunately occurs on January 1, 1897, on which date, for the first time, a large portion of "improvement" traffic was added to "special" trade returns, which had formerly not been included in it, so that for any years before and after that date no correct comparisons can be made (as fully explained in Foreign Office Report No. 2040, Annual Series, 1898).

The German imperial statistical office published in June, 1898, a statement comparing 1896 and 1897 trade as a whole and for each class of goods, but not for trade with each foreign country, in which all the newly included "improvement" traffic for inland account was allowed for. But the lately issued complete statistical volume on trade with each foreign country has no comparative table on this subject, except for enabling a comparison of the total trade in imports and exports with each country in 1896 and 1897, but not for different classes of goods to each. Nor is any further comparison, I believe, to be issued, so that for the coming years one can not even compare farther back than the year 1897—a very unfortunate circumstance to those interested in the statistics of the development of trade in Germany.

In 1897, after making due allowance for the above-mentioned change in statistics, the total "special" trade was £405,483,550, being £229,453,350 for imports and £176,030,200 for exports. The differences involved by this change amounted to large sums. There was thereby arbitrarily added to the total "special" imports £4,482,950 and to total "special" exports £5,316,500. After allowing for these differences the result of trade in 1897, as compared with 1896, was an increase for Germany of £14,095,194 for imports, but a decrease of £226,300 for exports.

The above figures give an idea of the immense general development of foreign commerce since 1871 and up to the present time.

DEVELOPMENT OF TRADE IN RAW MATERIALS AND IN MANUFACTURES, 1889 TO 1896.

The figures for "special" trade in raw materials and manufactures during the seven years 1889–1896, which are strictly comparable, are most interesting. The value of imported raw materials for industrial purposes was in the former year £88,375,000, weighing 20,862,272 metric tons, and in the latter £94,300,000, weighing 27,482,332 tons. Meanwhile the value of exported raw materials of German origin was £33,245,000, weighing 15,284,035 tons, and £38,660,000, weighing 21,404,520 tons. This shows that both the importation of foreign raw materials necessary to the home industries and the exportation of German raw products required by foreign industries had immensely developed.

Turning to manufactured articles, the value of imports fell from £49,635,000 in 1889 to £46,960,000 in 1896, while that of exports rose from £104,935,000 to £115,060,000 in the same period.

There is in the above two comparisons ample demonstration of the satisfactory state of manufacturing industries, which have of course not only developed an increased export value of about £10,000,000 during that time (when prices for manufactures generally have been falling), but they have also to an enormous extent replaced the formerly imported foreign manufactured goods, which latter, even supposing a like population in 1889 and 1896, fell by over £2,000,000 in the nine years. But as a matter of fact the increase in population in that period was about 4,000,000, whose wants in manufactured articles had evidently also been supplied by the German home industries, and their value must have been immense.

The increase in imports of food, including cattle and other articles of consumption, was from £61,465,000 in 1889 to £74,100,000 in 1896, while the exports of a similar nature rose from £20,060,000 to £25,780,000.

MOVEMENT IN EXPORTATION OF LEADING GROUPS OF GERMAN INDUSTRIES, 1889 TO 1896.

It is well worth mentioning here also the movement in exportation of certain large groups of German industrial products between the same two years. The figures were for the textile, felt, and clothing trades £8,530,000 and £7,775,000 respectively for raw materials and £45,710,000 and £40,100,000 for manufactures; for machines, tools, and other instruments, £7,505,000 and £10,420,000 respectively; for all metal industries (excepting only the

preceding category and precious metals): for ores, £720,000 and £575,000; for rough "nonprecious" metals, also coined (in this are included pig iron, broken and scrap iron, iron loops or blooms, rough rails, and ingots), £2,945,000 and £2,715,000; for roughly worked-up articles (in this are included bar and fashioned iron, wheel tires, plowshare iron, wire, plates, sheets, and rolled, etc., of zinc, lead, tin), £4,370,000 and £6,335,000; and for manufactured metal articles £9,050,000 and £11,885,000; for food and other articles of consumption, £4,295,000 and £3,895,000 respectively for raw materials and £14,170,000 and £17,445,000 for manufactured products; for the chemical and pharmaceutical industries, £1,620,000 and £1,815,000 respectively for raw materials and £11,335,000 and £16,220,000 for manufactured articles; for the products of the glass, clay, stone, and asbestos industries, £1,550,000 and £2,115,000 respectively for raw materials and £3,580,000 and £5,635,000 for manufactures; for the products of the leather, oilcloth, and hide industries, £1,670,000 and £2,165,000 respectively for raw materials and £10,185,000 and £8,665,000 for manufactures; for ornamental articles, millinery, and toys, £4,250,000 and £5,045,000; and for literary work and art productions, £3,950,000 and £6,035,000.

On studying the chief changes in imports and exports of the Empire from and to all countries we find the following results:

For value of imports the principal increases were £8,642,850 (+2,505,549 metric tons) for grain, flour, potatoes, etc.; £2,081,050 (+138,548 tons) for timber and wood of all kinds; £1,638,000 for tobacco; £1,766,400 for eggs; £1,420,450 for copper; £1,358,700 for linseed; and £1,264,450 for skins and hides. The chief decreases of value were: £2,997,300 (but +23 tons) for silk of all kinds; £2,130,950 (but +30,372 tons) for raw wool; £2,059,400 (but +48,182 tons) for cotton, raw and waste; and £1,077,550 (but +227,974 tons) for petroleum.

For value of exports the principal increases are: £3,675,500 (+466,672 tons) for all kinds of sugar; £2,264,600 for machinery of all kinds; £2,002,650 for books, maps, engravings, etc.; £1,954,450 for fine iron and steel wares; £1,528,550 for dyes; £1,322,300 for coals; £1,051,300 for coke; £995,300 for rough ironware; £700,000 for paper; £569,100 for leather; £427,000 for cotton (raw and waste); and £306,750 for glass and wares thereof.

The chief decreases of value consist of £3,744,750 in silk manufactures; £1,279,950 for leather wares (except gloves); £624,550 for wearing apparel; £585,100 for woolen manufactures; and £378,650 for all kinds of spirits.

VALUE OF GERMAN TRADE TO DIFFERENT COUNTRIES FROM 1889 TO 1896.

During this same seven-year period, 1889-1896, "special" trade stood as follows with the countries mentioned below:

COUNTRY.	IMPORTS.		EXPORTS.	
	1889	1896	1889	1896
	£	£	£	£
Great Britain.....	33,261,850	27,565,650	32,336,850	35,639,800
Russia.....	26,006,550	31,410,050	8,710,500	11,579,700
Austria-Hungary.....	26,492,350	27,342,600	15,950,300	19,984,200
United States.....	15,873,450	26,415,200	19,751,800	19,102,500
France (a).....	13,569,950	11,476,750	10,467,350	10,066,550
Belgium.....	16,786,050	8,660,300	6,859,950	8,396,850
Holland.....	14,218,000	7,946,800	12,451,300	13,082,000
Switzerland.....	9,019,300	6,927,550	8,521,450	11,927,300
Italy.....	7,427,850	6,599,950	5,075,600	4,179,200

a Includes Tunis and Algiers.

For German "special" trade with British colonies and possessions the figures were in the same years:

COUNTRY.	IMPORTS.		EXPORTS.	
	1889	1896	1889	1896
	£	£	£	£
British East Indies.....	4,763,700	8,558,150	1,325,100	2,458,950
British Australasia.....	1,722,900	5,160,200	1,062,750	1,462,350
Cape Colony and Natal (a).....	681,050	1,055,950	375,950	782,250
British West Indies.....	299,550	554,700	82,750	56,400
British North America.....	51,400	147,700	817,750	765,100

a Includes Bechuanaland, Basutoland, etc.

RESULTS OF TRADE WITH FOREIGN COUNTRIES, 1889 TO 1896.

We thus see that German trade, during the above period and with the above-mentioned European countries, was most satisfactory. On analyzing these figures we find that, as regards imports, the increases were only from the United States, with £10,541,750; from Russia, with £5,403,500, and from Austria-Hungary, with £850,250, all three being countries producing on a large scale grain and other food stuffs, and making a total of £16,795,500, chiefly of imported food for the growing German population. From the other six countries there is a total decrease of a value of £25,106,000; and, be it noticed, this reduction is all from nations whose chief imports into Germany are manufactures, clearly thereby showing the great development of German similar industrial products. That sum total consists of the following reductions: Of £8,125,750 from Belgium; of £6,271,200 from Holland; of £5,696,200 from Great Britain; of £2,093,200 from France; of £2,091,750 from Switzerland; and of £827,900 from Italy. The very large falling off from Belgium and Holland is, no doubt, also due to less transit trade from other nations (Great Britain, for instance) via those two countries, as well as to less imported goods from Belgium and Holland themselves.

TRADE OF GERMANY WITH GREAT BRITAIN, 1889 TO 1896.

Great Britain's loss of imports into Germany, valued at £5,696,200, from 1889 to 1896 is to be accounted for by the following reductions: £921,550 for wool and wares thereof; £897,900 for groceries and other articles of consumption; £861,650 in cotton and cotton goods; £765,250 in drugs, pharmaceutical necessities, and paints; £600,750 for copper and wares thereof; £394,950 in oils and fats (excluding petroleum); £233,850 for caoutchouc and india-rubber goods (but the quantity increased by 495 tons); £223,100 in skins and hides; £222,600 for corn and other agricultural produce, and £201,900 for coals, lignite, coke, etc. (but the quantity had increased by 905,326 tons).

The only imports that had risen much from Great Britain were £289,850; for tar, pitch, resin, and asphalt; £164,950 for linen and wares thereof, and £126,300 for machines and vehicles.

As regards exports we find, on the one hand, merely three reductions, namely, of £896,400 to Italy, of £589,300 to the United States, and of £400,800 to France, or a total of only £1,886,500; while, on the other hand, the value of the sum total of increased exports is £15,779,500, consisting of £4,033,900 to Austria-Hungary, of £3,405,850 to Switzerland, of £3,302,950 to Great Britain, of £2,869,200 to Russia, of £1,536,900 to Belgium, and £630,700 to Holland.

The bulk of this increase is, of course, of the manufactures and products of all the new industries that have developed so widely in late years. It is remarkable that the movement is especially marked to those nations which are themselves great industrial countries.

The increases in German exports to Great Britain in the period under review consisted chiefly of £1,595,400 in groceries, of £1,118,950 in hardware and ironmongery, of £601,100 in drugs, apothecary's wares, and paints, of £568,650 in iron and wares thereof, of £344,450 in paper and cardboard, of £332,500 in fats and oils, of £326,000 in clay wares, of £218,050 in clothes and underlinen, of £179,050 in brush wares, of £172,300 in cotton goods, of £163,850 in glassware. There is only one great decreased export to England, and that is of £1,491,000 for silk goods; but there are also reductions of £250,000 for zinc goods, of £230,150 for cattle, of £189,650 for woollen goods (though the quantity increased by 1,244 tons), and of £177,800 for wooden articles (though 18,001 more tons in weight).

GERMAN TRADE WITH BRITISH COLONIES AND POSSESSIONS, 1889 TO 1896.

On turning to German commerce with British colonies and possessions in the same seven-year period, we note the following points: From all of them the imports had increased by a value of £7,758,100, consisting of £3,794,450 from the British East Indies, of £3,437,300 from British Australasia (which includes New Zealand, Tasmania, etc.), of £374,900 from the Cape and Natal, of £96,300 from British North America, and of £55,150 from the British West Indies. For exports to them, the increases were three—£1,133,850 to the East Indies, £406,300 to the Cape and Natal, and of £399,600 to British Australasia, or a total of £1,939,750; and the decreases were two—£52,650 to British North America, and £26,350 to the West Indies, or a total of £79,000.

Here is clearly seen the preponderating importance of British colonial imports into Germany over German exports to the colonies, though the latter are still increasing. This is explained by the importation from them of the immense and yearly increasing quantities of raw materials, such as wool, hides, etc., absolutely necessary to the industries of the German Empire, which they could not possibly do without. This being its chief character, it is also admitted duty free. That small part which does not consist of such raw materials, and which is subject to duty, is of little importance to the colonies.

COMPARISON OF TRADE OF BRITISH AND GERMAN EMPIRES IN 1889 AND 1896.

Now, on comparing the trade of the two Empires together in 1889 and 1896—that is to say, of the Empire of the Federated States of Germany on the one side, and of the British Empire, consisting of the United Kingdom and all her colonies and possessions, on the other—we obtain the following comparison:

The value of German imports from the British Empire in 1889 was £40,780,450, being £33,261,850 from the United Kingdom and £7,518,600 from all the colonies; by 1896 it had become £42,842,350, being £27,565,650 from the former and £15,276,700 from the latter.

The value of German exports to the British Empire in 1889 was £36,001,150, being £32,336,850 to the United Kingdom and £3,664,300 to all the colonies; by 1896 it had become £41,164,850, being £35,639,800 to the former and £5,525,050 to the latter.

It will therefore be observed that though the imports from the British Empire as a whole have risen by £2,061,900 from 1889 to 1896, the imports from the United Kingdom (chiefly manufactures) have diminished (—£5,696,200), while those from the colonies (chiefly raw materials) have increased rapidly (+£7,758,100), and that the total German exports to the British Empire (chiefly manufactures) have risen by £5,163,700, those to the United Kingdom having increased considerably (+£3,302,950), and those to the colonies having also developed (+£1,860,750), but very much more than the former in proportion to the total trade involved.

Another point to notice is that the international “special” trade between the British and German Empires had up to 1896 approximated more and more to the same total value. In 1889 the difference was £4,779,300 in favor of the former, the figures being £40,780,450 on the British side, and £36,001,150 on the German side. But by 1896 this difference had been reduced to £1,677,500, still on our side, the figures being £42,842,350 for imports from the British Empire, less £41,164,850 for exports to it from the German Empire. The actual value, therefore, of the German and British commercial interests involved in their international trade in 1896 was almost identical, the difference being merely one of £1,677,500.

This difference for the year 1897 has, however, been increased to one of £2,501,750 in favor of the British Empire.

COMPARISON OF TOTAL IMPORTS AND EXPORTS FOR GERMANY AND ENGLAND, 1895 TO 1897.

It is instructive to compare (excluding, of course, precious metals) the total imports for home consumption and the total exports of domestic produce for Great Britain and Germany in recent years. The results (after duly allowing for the change in statistics on January 1, 1897) are these: For Great Britain the figures given for imports for home consumption (which do not exist in English statistics) are total imports less reexports, so as to get them approximately in order to compare with German “special” imports.

For imports for home consumption we have, then, for 1895, 1896, and 1897, respectively, for Great Britain, £356,747,287, £385,575,241, and £391,638,506, and for the German Empire £206,033,450, £215,358,156, and £229,453,350.

For exports in domestic produce we then have in the same three years: For Great Britain, £225,890,016, £240,145,551, and £234,219,708, and for Germany, £165,895,000, £176,256,500, and £176,030,200.

The net results are, therefore, the following:

1. During 1896, for imports, an increase of £28,827,954 for Great Britain, and of £9,324,706 for the German Empire, and for exports a rise of £14,255,535 for Great Britain, and one of £10,361,500 for Germany.

2. During 1897, for imports, an increase of £6,063,265 for Great Britain, and one of £14,095,194 for the German Empire, and for exports a decrease of £5,925,843 for Great Britain, and one of only £226,300 for Germany.

The loss to us of £5,925,843 in 1897 was, it will be remembered, largely due to a reduction in value of £5,248,000 for cotton and cotton goods, partly owing to fall in prices. The German values given here in this comparison are, of course, founded, as in Great Britain, on the prices of 1897. The net difference in favor of Germany over Great Britain for 1897 as regards exportation from both was £5,699,543 (being —£5,925,843 versus —£226,300).

TRADE OF BRITISH AND GERMAN EMPIRES IN 1897.

The detailed figures for the trade of the British and German Empires in 1897 are the following (after making due allowance for the change of statistics on January 1, 1897):

Imports from the British Empire are £42,067,000, being £27,689,400 from the United Kingdom, and £8,587,900 from the British East Indies, £4,283,050 from British Australasia, £871,500 from the Cape and Natal, £426,450 from the West Indies, and £208,700 from British North America.

Exports to the British Empire are £39,565,250, being £34,262,400 to the United Kingdom, £2,232,650 to the British East Indies, £1,533,900 to British Australasia, £836,950 to British North America, £636,350 to the Cape and Natal, and £63,000 to the West Indies.

During 1897 the total imports from Great Britain had risen by £123,750, but exports to Great Britain had fallen by £1,377,400, while imports from the British colonies had decreased by £899,100, and the exports to them had also diminished by £222,200.

GERMAN TRADE WITH FOREIGN COUNTRIES IN 1897.

The leading characteristics of German trade in 1897 with Great Britain and her colonies have been given above, and the figures for commerce with the other chief foreign countries are now added.

The total "special" trade with all nations for imports was valued at £229,453,350, or £14,095,194 more than in 1896, and for exports the figures were £176,030,200, or £226,300 less than in the former year.

The value of "special" trade was as follows for the countries mentioned below:

COUNTRY.	IMPORTS.		EXPORTS.	
	1897	1896	1897	1896
	£	£	£	£
Russia.....	34,314,000	31,410,050	11,504,000	11,579,700
Austria-Hungary.....	29,000,750	27,342,600	19,951,750	19,984,200
United States.....	32,581,250	26,415,200	19,341,650	19,162,500
France.....	12,066,500	11,476,750	10,323,550	10,066,550
Belgium.....	9,058,350	8,660,300	9,250,450	8,396,850
Holland.....	8,979,500	7,940,800	13,009,600	13,082,000
Switzerland.....	7,156,400	6,927,550	12,270,150	11,927,300
Italy.....	7,288,650	6,599,950	4,296,300	4,179,200

In 1897 the large increase of £14,095,194 in imports is mainly accounted for by a rise of £6,166,050 in importation from the United States, of £2,903,950 from Russia, of £1,658,150 from Austria-Hungary, of £1,032,700 from Holland, and of £688,700 from Italy.

The value of exports in 1897 to all countries remained as a whole extraordinarily stationary, as is shown by the net result of a decrease of £226,300 over 1896. The only important exceptions are an increase of £853,600 to Belgium, and a decrease of £1,377,400 to Great Britain.

IMPORTANCE TO TRADE STATISTICS OF CHANGE MADE IN DRAWING THEM UP IN GERMANY IN 1897.

It is much to be regretted, as mentioned before, that no comparisons with 1896, other than those given above for the whole trade to and from each country, can be made, as the complete official volume of imperial statistics (issued in October, 1898) does not, under the figures for each nation, distinguish the value or quantity of each customs classification, or of each article included for the first time in 1897 in "special" trade, and which had previously been excluded from it. The figures that are given for 1897 include all the new additions in "improvement" trade. They are, therefore, not given here, as it affords no standard of comparison whatever with all the statistics of previous years. The only other information on this subject was issued in June, 1898, for the whole trade of Germany as regards classes of goods, but without distinguishing the amount of trade with each individual country, the substance of which was published in the Foreign Office Report No. 2138, Annual Series, 1898.

That such a complete break in statistics should occur is most unfortunate, especially as it prevents any detailed comparisons in different kinds of goods of England's trade with Germany, as between points before and after January 1, 1897. For the future, therefore, in reports on Anglo-German commerce, comparisons can only be carried back to the year 1897, and not to 1896, nor to any previous year. And in consequence of this said change the total trade of Germany with each foreign country, both for imports and exports, will have been arbitrarily and permanently enlarged, not by increased commerce but by this alteration in collecting statistics, a point that will always have to be carefully borne in mind when reading reports on trade since 1897.

VALUES OF INDUSTRIAL SHARES.

In order to show the flourishing state of industries in the last 14 years, I have appended in the Appendix, Annex No. 6, page 72, a table of the chief industrial shares quoted on the Berlin Stock Exchange. Their price in 1885, 1890, 1895, 1896, 1897, and 1898 are there given in December of each of those years. The highest and lowest

quotations during that month are stated. It will there be clearly seen what a remarkable advance has been made from 1885 to 1898, and the table contains much valuable information to all those interested in the material progress of the German Empire.

2. MARITIME INTERESTS.

HISTORY AND DETAILS OF POSTAL SUBSIDIES TO GERMAN STEAMSHIP COMPANIES.

The question of subsidizing German steamship companies for the purpose of carrying mails has only come up in recent years with the growth of the mercantile marine. A sum of £324,500 a year is now paid for postal subsidies, being £279,500 to the North German Lloyd Company and £45,000 to the Hamburg East African Company. Mail bags sent by other lines are paid for separately; but such payments only amounted to £19,250 in 1897.

The first subsidy bill was not passed until March, 1885, and it became law on April 6 of that year. The object of this subsidy was distinctly stated to be "for the starting and maintenance of regular postal service" between Germany and East Asia. And in presenting this bill it was forcibly represented that English and other foreign steamer companies, already running to the East, were heavily subsidized for mail purposes. A sum of £220,000 was then granted, during 15 years, to the North German Lloyd Company for fast postal services: to East Asia, £85,000; to Australia, £115,000, and to a branch Mediterranean line, £20,000, which sums have been estimated to be equal to a subsidy of 18 per cent for the Asiatic and to one of 6 per cent for the Australian line on the value of the German exports carried to those places at that date.

The proposed subsidies for lines to West and East Africa were then rejected. But on January 21, 1890, a grant of £45,000 a year was sanctioned for the Hamburg East African Company for a period of 10 years for a postal service to Delagoa Bay via Suez, Aden, Zanzibar, and Mozambique.

One of the special conditions of the 1885 contract with the Lloyd Company was that the new ships must be built in the country, and materials produced in Germany were to be used as far as possible. Only German coal was to be burnt, unless with the special sanction of the imperial chancellor. Repairs to vessels were also to be executed in home yards when possible. The plans of the new ships were to be approved by the chancellor. In case of the mobilization of the navy the Chancellor was empowered to use the ships on the subsidized lines on certain payments, or to buy them outright for full value, under the "war services" or "Kriegsleistungen" law of June 13, 1873. No vessel could be sold to a foreign power without special permission from the Government. These conditions have all been maintained in later contracts. And, though it appears not to be expressly stated in them, it is to be presumed that all the new ships have been built in conformity with admiralty requirements. The only official declaration on the subject would appear to have been one made by the representative of the admiralty (before the commission of the Reichstag, which met early in 1898 to consider the new subsidy bill for a fortnightly service to China), who then stated that "the managers of the North German Lloyd had undertaken in writing to carry out, as regards new ships and crews, all the admiralty requirements, and also, as far as possible, when reconstructing vessels." So that there seems to be some uncertainty as to whether this was also the case prior to the year 1898.

In 1896 there was further agitation for a subsidy of £75,000 a year to establish a fortnightly service to China; but this project was not carried through until April 13, 1898. This bill also empowered the chancellor to continue the former subsidies to the North German Lloyd, conjointly with this new one, for a further period of 15 years. So that the present contract runs to the year 1913.

In the first 1896 draft bill for the last granted subsidy it was fully acknowledged that the indirect advantages therefrom to the nation would be as great as the direct, and it was pointed out that the success of German shipbuilding and the transfer of orders for ships from British to German yards dated from the institution, in 1885, of these postal subsidies. It was estimated that, though the Lloyd Company had in the nine and a half years received £2,950,000 for mail subsidies, it had expended nearly £3,000,000 (*a*) on the products of Germany, which would otherwise have been expended abroad. During the first 10 years, in spite of the subsidy, there was a financial loss of some £31,000. The line is now, however, paying well—a dividend of 5 per cent in 1897—and has an immense future before it.

It is presumed that German commerce to the East has been somewhat helped thereby, for since the date of these subsidies the export trade from 1885 to 1895 doubled in value to China, more than quadrupled to Japan, and trebled to Australia. And the increase in imports from those places has been still more favorable.

OTHER ASSISTANCE GIVEN TO SHIPBUILDING DIRECTLY AND INDIRECTLY.

Assistance of another kind has also been given to shipbuilding by the customs tariff law of May 24, 1885, which decreed that "materials destined for the construction, repairing, and outfitting of seagoing vessels, inclusive

a £830,000 for building, £470,000 for repairs, £144,000 for extraordinary repairs, and £1,500,000 for coals, etc.

of ordinary gear, were to be admitted duty free." A law of July 17, 1889, on "Regulations for shipbuilding," carried out the above provisions, and specified what articles could be admitted free. And another law of March of that same year on "Regulations for harbors and ports" gave a list of certain imports, destined for the fitting out of sea or river ships, which were to be admitted duty free.

Valuable help has also been afforded by the so-called "preferential," but better named "differential" rates on the State railways for the transport of certain German materials for the construction of vessels. An important step to advance the employment of home in preference to foreign materials was taken in December, 1897, when a meeting was held at Altona of the representatives of the chief shipbuilding yards, of the principal steel and iron works and rolling mills producing materials for the construction of vessels and of the State railways concerned, at which it was decided that both the former would—in the event of the railways assisting them—incur certain present sacrifices in order to cooperate to exclusively use German materials in shipbuilding in direct opposition to British competition for these supplies. A like attempt had already been made, but unsuccessfully, in November, 1895, at a similar meeting at Hanover.

Consequently, during 1898, further preferences in the matter of freights have been accorded on the state railways to certain materials used in the construction of vessels.

LEVANT AND EAST AFRICAN TRAFFIC, AND RESULTS OF THE REDUCED THROUGH RATES.

Additional, but small indirect assistance is also obtained by the very low combined rail and sea freights to the Levant and East Africa (as far as Durban, and to stations of the South African Railway from Johannesburg to Pretoria, via Delagoa Bay). One of the fundamental principles laid down in 1884 by the minister of public works in a letter to the railway council was that "preferential" tariffs have been and would still be granted in the future "to assist German ports in competition with foreign ports." The establishment of these rates is equivalent to a small bounty to the two German steamship companies running to those places. The service to the Levant began in June, 1890, in connection with the Levant Steamship Line of steamers, that to East African ports began in April, 1895, in connection with the East African Steamship Company. It will be remembered that the latter company has been also receiving since January, 1890, a direct mail subsidy of £75,000 a year. The Levant Steamship Company, however, receives none.

The results of this policy of creating traffic by these two steamship companies are given below from the official returns of the working of the Prussian state railways in 1896-97, which were laid before the Prussian House of Deputies in January, 1898:

1. For goods exported and subjected to the competition of other countries. From German stations to Levant ports and to stations of the Oriental and Bulgarian Railways via Hamburg by Levant Steamship Company. These Levant reduced rates are still lower than those in force merely to German ports for direct exportation by sea. Introduced June 15, 1890.

Before these rates started there was much less traffic. In 1892-93, 12,721 tons were sent at a cost of £8,550 6s.; in 1896-97, 10,262 tons went for £5,933 13s.

2. For goods exported and subjected to the competition of other countries. From German stations to East African ports, and to the Transvaal, via Hamburg, to increase exports of German industries. Introduced April 1, 1895.

Before these rates were introduced there was much less traffic. In 1895-96, 3,589 tons were sent at a cost of £1,555 11s.; in 1896-97, 4,959 tons went for £2,869 7s.

Such rates are most beneficial to German exporters, and give them, in certain South African markets, decided advantages in competing with British exporters to those places.

Hence it will be seen that the amount to which shipping is subsidized in Germany is moderate, but it is enough to effectively stimulate and encourage national enterprise in this direction.

AMOUNTS OF BRITISH POSTAL SUBSIDIES TO STEAMER COMPANIES TO ALL PARTS OF THE WORLD.

In order to enable comparison with the German postal subsidies, I now give a summary of similar British payments taken from the estimates for the year ending March 31, 1899.

The total payments for actual carriage of mails is £823,526, including, however, £170,250 for services in the United Kingdom and £25,000 for the Dover-to-Calais service. There are in this total sums of £253,450 to steamer companies for services to North and South America, and to the West Indies. Other similar payments are £78,900 to African, £115,000 to Asiatic and Australian lines, and £60,000 to services for mails from Canada to China; £4,000 is paid for the foreign and colonial parcel service.

The actual advance in the matter of maritime interests that Germany has been able to achieve in late years from a statistical point of view will be a study of deep interest.

GROWTH OF GERMAN MERCANTILE MARINE AND CAPITAL INVESTED.

In 1871 the tonnage of German ships was 982,355, of which only 81,994 belonged to steamers. By January 1, 1897 (after allowing for the difference of measurement introduced in 1895), it had risen to about 1,650,000, of which 1,039,200 were steam tonnage (by the new system of measurement 1,487,577 and 889,970, respectively). The four steamship companies at Hamburg in 1887 had a share capital of £1,525,000. Ten years later that of the existing ten steamer lines was £3,273,750. Including the Lloyd Company at Bremen, the total becomes £5,273,750 for 1896. At the end of that year the whole book value of the Hamburg steamer fleet was nearly £7,000,000, and, adding £1,700,000 for 26 large steamers then building, the cost of the fleet would be about £8,700,000 at the end of 1897. For Bremen a further £4,450,000 may be added.

It has been estimated that the book value of the whole German merchant steamer fleet at the end of 1897 was, perhaps, nearly £15,000,000. The German mercantile marine is now the third largest in the world, and appears to be second as regards steam tonnage, and fourth as regards sailing tonnage.

It is notable that nearly the whole advance has been made in the North Sea fleet. That of the Baltic has retrograded. Statistics show that the fleet there has fallen in tonnage from 449,000 tons in 1871 to about 270,000 in 1897. It is entirely a Prussian fleet, and has never enjoyed any state aid. Some people think that German statesmen should now endeavor to aid it by abolishing the system of "customs credits" and of private warehouses for grain, for the great cause of decline is said to lie in the reduction of the transport of corn, a result of the protectionist policy that has in late years been assumed by the Government as regards that commodity, in consequence of which the Baltic ports have suffered greatly.

STATISTICS OF SHIPBUILDING TRADES IN CENSUS OF 1882 AND 1895 COMPARED.

A good idea of the advance made may be gathered from a comparison of the census of 1882 and 1895, for the shipbuilding trades of Prussia only. In the former year there were 13,161 workmen employed, while in the latter there were 25,343. Of works with over 1,000 men there were in 1882 only three, and in 1895 six, which six now employ an average of 2,632 men each.

Similarly for the Empire, the number of men employed in the former year was 22,524, and, in the latter, 35,336, and the amount of horsepower employed in the machinery used in the yards is said to have risen from 1,121 to 8,556.

Germany now possesses splendid shipbuilding yards, of which some of the most famous are: The Vulcan, at Stettin; the Schichau, near Danzig; the Germania, at Kiel, and the Blohm und Voss, at Hamburg. At the Vulcan works there has lately been erected a floating dry dock of a capacity of 12,000 tons.

STATEMENT OF VERY LARGE STEAMERS BUILT AND BUILDING BELONGING TO GERMANY.

It was stated in October, 1897, that out of the 12 steamers then existing in the world exceeding 10,000 tons 8 were under the German flag, and that only 2 each belonged to England and to the United States, respectively. Out of those eight German ships, all but one had been built in home yards. The Lloyd Company are also going to build four further ships of over 10,000 tons each for the new fortnightly service to China, which will soon bring the total for the German Empire to 12 vessels of that large size.

The following data are instructive, and show the total ships and their tonnage now being built for two German steamship companies:

For the Hamburg-American Line there are now being constructed 14 ships and four small craft (of 3,200 tons) with a total tonnage of 148,180. Nine of these steamers are over 10,000 tons, and all of the 14 except three are laid down in German yards.

The North German Lloyd Company in Bremen are also building nine new steamers of 78,380 tons altogether.

The two companies are, therefore, between them, building 23 large steamers of a total registered tonnage of 226,360.

WORK OF TWO LEADING SHIPBUILDING YARDS AT HAMBURG AND STETTIN.

Two examples of the work accomplished in single yards in 1897 are now quoted. The Vulcan, at Stettin, delivered, during that year, ships to the value of £977,563, and the orders in hand amount to £886,700 altogether, which will keep them fully employed up to the year 1900. These orders cover for the Hamburg-American Company a twin-screw steamer of 14,000 tons, 680 feet long, of 33,000 horsepower, and having a speed of 23 knots; and for the Lloyd Line, for their new fortnightly service to China, four steamers, each 500 feet long, two to be delivered in fifteen to eighteen months and the other two ten months later. From March, 1877, to March, 1897, this Vulcan yard had launched, besides many merchant vessels, 16 men-of-war, of which five were armor-plated battle ships.

The well-known firm of Blohm und Voss, shipbuilders at Hamburg, during 1897-98, delivered five steamers (and one set of engines) of 34,994 gross tonnage. There remained on the stocks 11 steamers of 83,529 tons and 1 line-of-battle ship "B" (a triple-screw armored vessel) for the German navy. Some 3,683 persons were employed in these works. And although over £5,000 was paid for the state insurance of workmen against illness, accidents, incapacity to work, and old age, yet there was (after placing considerable sums to the reserve fund) a surplus of £16,907 (it had been £35,212 in 1896-97), which gave a dividend of 5 per cent (in the previous year it had been 8 per cent).

FINANCIAL RESULTS FOR LEADING STEAMSHIP COMPANIES IN 1897.

The financial results of the leading German shipping companies in 1897 will have an interest for English readers, in view of the small dividends now earned by most British lines.

The North German Lloyd (capital £4,650,580, made up of £2,000,000 original shares, of £1,650,580 4 per cent bonds, and of an additional £1,000,000 of shares which were added in 1898) paid 5 per cent, the Hamburg-American (capital £2,250,000) paid 6 per cent, the Kosmos Company (capital £400,000) paid 7½ per cent, the Hamburg South American Company (capital £375,000) paid 12 per cent, the German East African Line (capital £250,000) paid 3 per cent, and the Hamburg-Australian Company (capital £200,000) paid 8 per cent.

EXPENDITURE IN EMPIRE ON NEW HARBORS, ETC., AND DEVELOPMENT OF PORTS.

Enormous sums have also been spent since 1888, when Hamburg, Bremen, and Altona joined the "Zollverein," on new harbor accommodation for the increasing shipping. Some £15,000,000 alone have been spent by the state of Hamburg on such work; at Bremen, Vegesack, and Bremerhafen, £5,700,000; at Altona, £450,000; at Geestemünde, £800,000; at Danzig, £400,000, and at Stettin, £1,450,000, in addition to the sum of £628,000 recently spent there (in 1897-98) on a new free harbor.

The development of the ports of the Empire on the North Sea has been remarkable, as is shown by the single instance that Hamburg now ranks directly after London and before Liverpool as the second most important port in Europe. The Baltic ports have not prospered to an equal extent, though it is hoped that the newly opened free port at Stettin may still further improve the trade of that rising place, and that the completion of a deep-water canal for small seagoing ships thence to Berlin will also make a great difference to its future.

At the last meeting of the Colonial Council (in November, 1898) it was decided to build a dry dock at Dar-es-Salaam, in German East Africa, which also serves to show the wonderful hold that maritime expansion has taken upon the country.^(a)

THE STATE OF SHIPBUILDING IN 1897.

During 1897, 79 ships were launched from German yards, in which figures are included only vessels of over 100 tons burden. This represents a total tonnage of 185,000, of which the bulk was for passenger boats, 40,000 for eight men-of-war, and 2,600 only for sailing ships. Besides this, 13 other merchant ships of 32,000 tons were built abroad for German account. Other kinds of sea craft, such as ice breakers for Russia, petroleum ships, and fishing steamers have also been turned out by the Germans.

The fact that the Empire can now supply the principal part of her own requirements in vessels of all descriptions, is considered by the German nation to be most satisfactory, when the well-merited standing and renown of British yards and the advantages they enjoy in the matter of low prices for iron and coal, are recalled.

These facts will give some idea of the great prosperity and immense capabilities of modern up-to-date German shipbuilding yards, which appears not to be yet fully realized in Great Britain.

And it is important not to forget that there have, altogether, been built a large number of men-of-war, both for the German navy and for foreign Governments. It is said that, since 1895, they have delivered 24 to foreign countries, and that there are at present orders in hand for 22 more. And now that the new navy bill provides that such a large number of ships are to be built in German yards, there will be an immensely increased activity. It is reported that out of 50,000 tons of men-of-war built lately in Germany, 23,000 were constructed by private and 27,000 by Government yards.

MINOR FACTS SHOWING THE DEVELOPMENT.

Full particulars of the shipping trade from a purely German point of view were given in a précis, drawn up by me in December, 1897, of the "Maritime interests of the German Empire," published by the imperial Government at the end of that year, in connection with the new navy bill. Information of all kinds is there given. Only a few other minor facts are added here to complete this subject.

^a The 1899 estimates of the Empire allow a first installment of £15,000 for this dock.

Several new lines of steamers are being started from Hamburg to different parts of the world. In November of this year it was even announced that a Hamburg firm is about to establish on the Yangtze River in China a fortnightly service of steamers with large steel-built ships. It is thus that the Germans hope to establish their first steamer communications on that important river, whereby one of the richest tea districts of China will be tapped.

The tonnage of seagoing vessels entering Hamburg under the German flag rose from 2,913,913 tons in 1896 to 2,982,421 in 1897; and it surpassed that of British ships for the first time in the former year. The total tonnage of ships entered at that port was 6,445,197 in 1896; by 1897 it had risen to 6,708,070.

The balance sheets of eleven Hamburg Marine Insurance Companies showed a total subscribed capital of £116,637,467 in 1895, which by 1896 had risen to £136,727,031.

PREPARATIONS FOR NAVY BILL OF 1897—PUBLISHED DATA.

With the view of preparing the public for an increase of the navy, which was the leading topic of 1897, the Government published collected statistics on the growth of the maritime interests of the Empire, which embraced the following and other points of interest:

The population from 1872 to 1897 had grown from 40,000,000 to 53,000,000. The foreign trade had increased enormously, and of the whole about two-thirds was sea-borne commerce. The trade of Hamburg alone had more than doubled during that period. Germany had ceased to export grain, and had become a large consumer of raw materials, while exporting masses of highly manufactured goods, thus making her very dependent on foreign countries both for her supplies and for markets for her industrial produce. The trade under the German flag had, since 1873, increased with European ports from a yearly total of 6,000,000 to 12,000,000 tons, and with non-European places from 1,000,000 to 6,000,000 tons.

A special publication was also issued to show the backward state of the German fleet. The general conclusions at which it arrived were—that the Empire was behind all other great powers, except Austria-Hungary and the United States, as regards a navy; that the expenditure for national defense, inclusive of the public debt, was extremely low when compared with that of foreign nations; and that, excepting in Russia, the contributions to public expenditure in Germany were less onerous than in other great European nations or in the United States.

Comparing Great Britain and Germany in 1896 and 1897, the following figures were given: For the former, there was an expenditure of £21,823,000 for the navy and of £18,056,000 for the army, as compared with one of £4,493,400 for the navy and of £31,749,750 for the army for the latter country.

Calculated per head of the population in 1897-98, Great Britain paid for national defense £1 6s. 8d., and Germany only 14s. 8d. according to that publication.

Adopting the principle that the tonnage of the merchant fleet ought to determine the national expenditure on a fleet, the following figures were presented: In England in 1897-98, with a total tonnage of 34,004,000, £21,823,000 was spent on the navy, or 12s. 10d. per ton, whereas in the German Empire, with a total tonnage of 4,648,000, £4,493,400 was expended, or 19s. 4d. per ton. But the value of such comparisons is not very self-evident, as so many other factors have also to be taken into consideration when considering such questions.

THE OBJECTS OF THE NAVY BILL, AND CONTEMPLATED STRENGTH.

As to the point of naval power, the introductory statement to the bill pointed out that its object was primarily a fighting fleet for the protection of the country's coasts, and that the size and number of the vessels had been especially calculated for this object. And great stress was laid on the fact that the small total strength contemplated would not permit of more than a fleet for sallying purposes in case of war with leading naval powers.

The aim of the bill, as finally passed on April 10, 1898, was to obtain the following strength for the navy, apart from torpedo boats, torpedo destroyers, training ships, etc.:

1. Seventeen ships of the line, 8 coast-defense vessels, 9 large and 26 small cruisers as a fighting fleet ready for sea; and,

2. A further reserve of 2 ships of the line, 3 large and 4 small cruisers.

This was considered a minimum of the requirements if the Government were really to be put in the position of properly carrying out their obligations.

On April 1, 1898, there existed, of ships already built or then building, 12 ships of the line, 8 coast-defense vessels, 10 large and 23 small cruisers, thus leaving to be built 7 ships of the line, 2 large and 5 small cruisers. The number of coast-defense ironclads was considered to be sufficient.

To the protection of German maritime commerce 6 large and 14 small cruisers are to be allotted, of which it is said that 7 will go to the China seas, 4 to American waters, 4 to the African coasts, and a few to Central and South America.

COST OF NEW FLEET AND ARMAMENTS.

The total cost of this new programme for the six years 1898 to 1903 is stated in the final bill not to exceed a total of £20,445,000 for nonrecurring expenditure, being £17,835,000 for the construction and armaments of the new ships, and £2,610,000 for other nonrecurring expenses. It is added that the recurring expenditure will not involve an increase of more than £245,000 every year in the naval budget.

A special clause provides that, should the sum total of recurring and special expenditure in the Admiralty Department exceed in any financial year £5,876,274 14s., and if the natural resources of the Empire do not suffice to cover the excess, such surplus shall not be covered by raising or adding to the indirect imperial taxes, the burden of which falls on articles of universal consumption.

The Government also declared that if extra taxation had to be raised under this bill the Federated States of the Empire would take care that such taxation should fall on those best able to support it.

At the above rate of expenditure it is probable that at least some £35,000,000 will be spent altogether in the next six years on the naval budgets of the Empire.

This bill also provides that the successive estimates shall contain provisions for the replacing of old by new ships, for it lays down the principle that means for this shall be provided on the basis that the life of battle ships and coast-defense vessels is twenty-five years, that that of a large cruiser is twenty years, and that that of a small cruiser is fifteen years.

The original naval bill was for a period of seven years' proposing an expenditure of £5,875,000 in 1898, and varying up to £7,525,000 in 1903, after which year it was to decrease to £7,485,000 in 1904.

GOOD PROSPECTS OF PAYING ALL EXPENSES OF NEW NAVAL PROGRAMME OUT OF REVENUE.

In the prosperous state of the country's finances it is expected that this large expenditure for the navy may be met out of the ordinary revenue; and if not, the loan that might be necessary could only be a small one yearly.

The past financial year (1897-98 *a*) has shown for the Empire an excess of actual revenue over the estimates of about £4,650,000. There have been increases under all heads, except from the stamp tax. The actual revenue from duties and taxes was £36,671,000, or £4,014,000 more than the estimates. The total revenue was £44,550,000. It will thus be seen that, except in the case of unforeseen circumstances, the prospects of not exceeding the current revenue in the next year or two by the increased naval budgets are very promising; and should this unfortunately occur, ample provision has been made to protect the working and poorer classes from the effects of any taxation that might be rendered necessary thereby.

3. TRAFFIC INTERESTS.

A. CANALS—COST AND DEVELOPMENT OF THE STATE CANAL SYSTEM, 1880-1892.

The natural advantages offered by Germany for water carriage are already considerable, but have been vastly increased by enormous expenditure. The Government has always done a great deal to extend the navigable waterways, and the Central Society for Developing River and Canal Traffic has, ever since 1869, been a powerful advocate of such extension.

It is not possible to ascertain the exact sums spent or to distinguish in recent expenditure that portion devoted to canals only from that spent on the improvement of the navigable waterways. The object of the Prussian Government in improving them has been to provide for the cheap conveyance of bulky goods which are not suitable for transport by rail, and to enable larger vessels to make use of the existing network. The total sum proposed to be expended on this work in the programme, adopted at the beginning of the period 1880 to 1892, amounted to £4,498,900. In the thirteen years between 1880-81 and 1892-93 the Prussian Government spent £5,140,700 "for maintenance of canals, locks, buildings, etc. (excluding new works and repairs)," £3,425,600 under the head of "extraordinary and nonrecurring expenditure," and £3,111,450 in other extraordinary expenditure, chiefly for the larger works of the canalization of natural waterways, and for new canals or the widening of old ones, and of constructing bridges, roadways, etc.

The total under these three accounts came to a total of £11,677,750. A sum of £6,197,600 was also specially voted, which comprised £2,991,250 for the Dortmund-Ems Canal (law of July 9, 1886); £261,350 for the improvement of Brandenburg waterways (law of March 12, 1879); £630,000 for building the Oder-Spree Canal (law of July 9, 1886); £160,000 for the canalization of the Lower Spree and a third navigable canal through Berlin (law of June 6, 1888); £1,075,000 for improving the navigation of the Oder; £80,000 for ameliorations on the Lower Oder, and £1,000,000 for improving the navigation of the Lower Vistula. It was claimed by the Government in 1890 that the made waterways are now almost all able to admit steamer traffic.

a To March in each year.

In 1894 the majority of agriculturists were opposed to rather than in favor of an extension of the network of canals, and this antagonism seems still to hold good to-day. Their one great objection is that an extension, though benefiting home agricultural products, at the same time cheapens the cost of freight for importations, especially of grains, which compete then all the more injuriously with German agriculture.

DATA ON LENGTH, DEPTH, ETC., OF CANALS.

Of the present 8,647½ miles (13,925 kilometers) of natural and artificial waterways in Germany in 1898, 67 per cent consist of rivers, 16 per cent of canalized streams, and 17 per cent of canals actually built. As regards depth, 14 per cent are navigable for ships drawing 1¾ meters (5 feet 9 inches), 14 per cent are good for a draft of 1½ meters (4 feet 11 inches), 51 per cent are navigable for vessels drawing 1 meter (3 feet 3 inches), and 14 per cent are good for a draft of 75 centimeters (2 feet 5 inches). Of the total 2,820 miles of canalized streams, 1,369 miles lie west of the Elbe, and of constructed canals, 1,450½ miles. In 1892 there were 1,530 steamers plying on German waterways, an increase of 84 per cent over 1882, and 21,318 other craft. The average capacity of the steamers had risen during that period from 131½ to 169½ tons, and that of sailing vessels from 92½ to 127 tons.

NEW CANALS AND ESTIMATED COST.

A new canal is the Dortmund-Ems, begun in 1886, which was estimated to cost £2,900,000, but the sums already spent appear to amount to £4,200,000. A Dortmund-Rhine canal was proposed in 1894, and was estimated to involve an outlay of £2,750,000. This is to be a continuation of the preceding canal. It is now reported from Hamburg that this scheme, but in an extended form, will be submitted to the Government, and will cost about £6,400,000, with a further £1,700,000 for branch canals.

The projected Great Midland Canal has been variously estimated to cost from £8,000,000 to £10,000,000 for merely connecting the Rhine, Weser, and Elbe, and perhaps the Oder also. The general line of direction is almost due east and west from a line a little north of Düsseldorf, on the Rhine, to Frankfurt, on the Oder, and via Berlin. Some canals already exist on part of this route. It is now reported that a bill embodying this project, in a further extended form, will be laid before the Prussian House of Deputies ("Landtag") this autumn, and that the enormous sum of £20,000,000 will be asked for to carry it out. This scheme is said to comprise (1) a midland canal (Rhine-Weser-Elbe); (2) a canal for large ships from Stettin to Berlin (Oder-Havel-Spree); (3) the "Masurischer" Canal (in East Prussia); (4) the Klonditz Canal (Upper Silesia); (5) the "Teltow" Canal. Such an extensive scheme as this would benefit the corn growers of the Eastern provinces, and also the industrial districts of the West, by affording the immense working population there cheaper bread. But the intermediate agricultural districts of Central Germany would doubtless suffer somewhat from lower grain prices, though themselves benefiting from the consequent reduction in price of manufactured articles from the Western industrial districts through the cheaper carriage.

There is also a projected independent Elbe-Kiel Canal, in order to convert the port of Kiel into an important outlet for inland trade.

The "Kaiser Wilhelm" Canal, recently opened, shows by the already considerable and increasing traffic, particularly of vessels employed in the German coasting trade, that, quite apart from its great strategical value for the Empire, this new waterway is becoming an important factor for its sea-borne commerce.

PROJECTED GERMAN-AUSTRIAN CANALS.

There is an "Austrian and German Society of Inland Waterways" that has existed since 1896. It advocates a mid-European canal, which is to be effected by the following three projects: (1) A Danube-Oder Canal; (2) a Danube-Moldau-Elbe Canal; (3) a Danube-Main Canal. If these projects are ever carried out they will greatly facilitate the trade of the German Empire to the southeastern portion of Europe, and will enable its products to be there sold at an even lower price than has hitherto been possible.

The following considerations enter into this plan: For the immense trade of the East to reach Germany now, and vice versa, the distance from the Suez Canal by sea is 3,316 knots to Hamburg and 3,596 knots to Stettin, whereas from Port Said to the mouths of the Danube it is only 950 knots, and thence to Stettin about 1,000 knots. This proposed route via the Danube, therefore, means only a distance of 1,850 knots, instead of 3,596 knots. Besides saving in distance, there is economy of time, power, and expense. This is sufficient, it is said, to convince people of the possibility of attracting to the inner districts of the German Empire a still greater portion of the world's trade by the building of large canals which would satisfactorily join the Rhine, Elbe, and Oder with the Danube. Germany should, consequently, it is said, when the question of canal extension arises, consider not only the improvement of her own inland water communications, but also the far more important point of improvement in international means of transport. Plans have already been made for connecting the Danube with the Elbe,

Oder, and Weichsel. One project is a Vienna-Prerau-Oderberg-Krakau line to join with the Oder and Weichsel, with a prolongation through Galicia to Brody and Petrikow, to join the Russian canal system. Another is the proposed Prerau-Pardubitz line, to join the Elbe. A third is that connecting Vienna with Budweis, by which a junction with the Elbe would be effected through the Moldau via Prague.

The oldest Austro-German canal project is the joining of the Rhine, Main, and Danube by the Ludwigs Canal, which goes from near Bamberg, on the Main, by Nuremberg, into the Altmühl, and then into the Danube. The existing canal is too small, and would have to be enlarged, or another constructed for heavier traffic, and the Main, from Frankfort to Bamberg, would have to be canalized. Such a connection, properly executed, has been estimated as costing about £6,000,000.

COMPARISON OF GERMAN AND FRENCH WATERWAYS IN 1895.

A comparison was made in 1895 of the French and German strictly inland waterways. For Germany there were 8,242½ miles properly navigable, and a further 4,029 miles fit for floating rafts and very light craft, being 1 kilometer of waterway for every 27 square kilometers in the country and for every 2,630 persons. In France there were similarly 10,122 miles, being 1 kilometer to every 32 square kilometers of territory and for every 2,360 persons. The former country had 754 locks and the latter 2,510 locks. Such figures of mere mileage are, however, unsatisfactory, for the waterways good for floating rafts are far more used in the former than in the latter country. It is thought that for waterways navigable for ships up to 100 tons Germany had then 8,011 kilometers and France 4,734 kilometers; for those up to 150 tons, the former had 2,047 kilometers, the latter 1,648 kilometers, and for vessels up to 300 tons the figures were 3,259 kilometers and 3,713 kilometers, respectively. The German network had, in 1885, covered by the "tonnage-kilometer" method of calculation about 4,800,000,000 on a length of 10,000 kilometers; whereas France, in 1895, had only covered 3,766,000,000 of "tonnage kilometers" on a length of 12,284 kilometers. In 1895 some 6,000,000,000 to 7,000,000,000 "tonnage kilometers" were probably covered in the German Empire.

B. RAILWAYS—STATE RAILWAYS PREDOMINANT IN GERMANY SINCE 1879.

The state railway system of Germany affords a subject of much interest, especially as it is predominating, if not almost universally adopted, in the Empire to-day.

It was Belgium that first constructed and managed a state railway. Certain German states, such as Saxony, Bavaria, Baden, etc., soon followed the Belgian example. In Prussia the movement came much later, but in 1849 that Government had constructed various lines.

In many European countries there gradually came to be adopted the theory that former private railways should pass into the hands of the state, which, in many cases, had already been compelled to largely assist them in different forms. The control of continental governments over these private companies also seems to have been very extended, and this probably made the change all the more easy at the end of the seventies, when Prussia took the lead in this respect, and in 1879 set to work to turn the chief private German lines into state railways.

EXTENT OF BROAD-GAUGE LINES.

Official statistics for 1896-97 give the length of the broad-gauge railways in the Empire at 28,566 miles (46,114½ kilometers), and in Prussia separately as 17,159 miles (27,663 kilometers), and of these lengths the former has 10,082 miles and the latter 6,430 miles of double (or treble) tracks. Of this total of 28,566 miles, 26,564½ miles were owned by the state, leaving only 2,001½ miles of line in the possession of private companies. Even of this small remainder, a part was leased to and worked by the state. It is thus seen that, in dealing generally with railways in Germany and their attendant considerations, this small proportion of private lines can well be disregarded. By far the largest relative proportion of private companies' lines is found in Bavaria, with about one-seventh of the whole.

CAPITAL EXPENDED ON BROAD-GAUGE LINES, AND EARNINGS.

In 1887-88 the total length of broad-gauge lines in the Empire was only 24,270 miles (39,082 kilometers), so that the advance to 28,566 miles (46,114½ kilometers) by 1896-97 was very large. Narrow gauges are referred to later.

The actual capital expended on the broad-gauge lines up to the end of the working year 1887-88 was £495,107,350, or £12,755 per kilometer, equivalent to £20,400 per mile; by 1896-97 it had increased to £580,186,600, or £12,600 per kilometer, equivalent to £20,310 per mile. In those two years the gross receipts had been £54,590,300 and £79,399,850, respectively, being in the former case £14,694,850 from passenger and

£37,536,650 from goods traffic, and in the latter case £22,230,650 from passenger and £53,563,550 from goods traffic. The working expenses amounted to a total of £29,318,250 in the former year and to £44,209,500 in the latter. The excess of gross receipts over expenditure is given as follows: For the same two years, £25,272,050 and £35,190,350, respectively, being 5.17 and 6.15 per cent on the invested capital.

AMOUNT OF ROLLING STOCK AND TRAFFIC CARRIED.

In the year 1896-97 there were on the broad-gauge railways 16,350 engines, 32,391 passenger carriages, and 346,792 goods wagons. There were carried in "personen-kilometer"—that is to say, the conveyance of one passenger over a distance of 1 kilometer—15,111,166,000, besides another 6,165,000,000 which consisted of the conveyance of persons belonging to the army for which no special payment was made. The number of "ton kilometers"—that is, the transport of 1 metric ton (1,000 kilograms = 2,204.6 pounds) over a distance of 1 kilometer—was 26,672,089,000.

The rapid development of traffic, especially in the last few years, is shown by the fact that from 1884-1894 the amount of goods carried rose from about 107,000,000 tons to about 174,000,000 tons; but within the subsequent years, 1895-1898, it rose to 217,500,000 tons. The improvement in the eleven years was 62½ per cent, but that in the last three years was 25 per cent. During the fourteen years the total had, therefore, more than doubled.

The number of officials employed was 170,718, and of other employees there were 208,978, making a total of 379,696 for the actual working of the lines, and in addition there were 4,059 officials and 58,660 workmen employed in the workshops, or a total of 62,719. The state railways, therefore, give employment to 442,415 persons.

British statistics for the United Kingdom for 1896 on railways afford the following data, that it is well to mention here in order to enable a rough comparison with the figures for German railways given above: There were 21,277 miles of line open, and the total capital paid up was £1,029,475,335. The traffic receipts were £85,296,200, or £4,009 per mile. The working expenses were £50,192,424. The number of persons employed was 465,112.

For a complete account of the working of the Prussian state railways only in 1896-97 the reader should consult my report No. 444, Miscellaneous Series, published by the Foreign Office in February, 1898. The leading points are merely given here. That report showed the invested capital on broad-gauge lines to be £354,339,326, an increase in capital of not less than £4,774,630 over the previous year. The total gross receipts were £54,972,497, showing a rise in one year of £3,001,494. The total expenditure was £29,777,499, being an increase of £1,279,931 over the previous year. The excess of receipts over expenditure was therefore £25,194,998, as compared with one of £23,473,434 in the previous year.

The Prussian railway debt in 1895-96 amounted to £261,499,861 out of a total originally raised of £351,183,539 for purchasing private lines, on which there was paid for interest £10,168,164 yearly, or at a rate of about 3½ per cent.

NET RESULTS OF STATE RAILWAY WORKING FROM 1882-83 TO 1895-96 IN PRUSSIA.

The excess of receipts over expenditure from 1882-83 to 1895-96 (thirteen years) has been £198,368,576, of which £120,148,244 had been applied as interest on the railway debt. After paying off £660,000 to meet deficits in the state expenditure, the net remaining surplus of £77,560,332 was distributed thus: For general state purposes, not connected with railway expenditure, £47,358,840; for paying off the state debt, £26,138,068; for canceling debt incurred by the state for railway purposes, £3,063,424, and for forming a fund for increasing working stock, enlarging lines, and for unforeseen expenditure, £1,000,000.

"PREFERENTIAL" RAILWAY RATES.

On the subject of "differential," often popularly called "preferential," tariffs a complete report for Germany was published in a Blue Book (Commercial No. 2, of 1898, and presented to Parliament in July, 1898, pp. 20 to 94) which should be consulted for all details. It is a system usually applied in practice to raw materials and commodities of low value in proportion to their bulk, and which only as a rule comes into operation for 5 or 10 ton truck loads. Where such concessions are made it is often with a view to larger returns through increased traffic, though in many instances it is merely to assist special branches of trade and industry, especially in effecting cheap exportation.

HOW APPLIED TO ASSIST EXPORTATION.

Instances of special assistance to exports, so as to be able to compete abroad, are found for coals to German ports, to Russia, to Roumania, to Austria, to Belgium, to the Netherlands, to Italy, and to France; for manures (so-called "Distress" tariff) for the relief of agriculture; for ores to German industrial centers and for exportation; for pig and other special kinds of similar iron to foreign countries, especially to enable competition with English

iron; for iron and steel products, to aid exports generally to most countries; for grains, to assist inland places in exportation; for spirits and alcohol, to aid exports especially to foreign ports and German colonies; for increased exportation of yarns and tissues to Italy; for glass to German ports for exportation by sea and especially to Italy; for sugar to Switzerland to assist competition there with Austrian sugar.

A study of the reasons for the introduction of "preferential" rates of this nature given in the remarks column of my translation (in above-mentioned Report No. 2 Commercial, 1898) of the official statement of all such rates in force in late years is most instructive as illustrating the methods employed by the German Government to combat foreign competition.

There are also other special seaport freights to aid the development of German ports. (See pp. 73 to 78 of Blue Book.)

But besides the above-mentioned rates there are also other special deviations from ordinary railway freights (pp. 79 to 85 of Blue Book) for traffic with the "Danube districts outside Germany," with the "lower countries of the Danube, including Turkey, Roumania, Servia, etc.," with "Russia, except Poland," with "Italy and South Austria," and those more generally known, to the Levant and East Africa via Hamburg.

"LEVANT" TRAFFIC EXPLAINED.

The so-called "Levant" traffic comprises an arrangement between the state railways and the German Levant Steamship Line (Deutsche Levant Linie) for direct carriage of goods at very low rates from all German stations to the Levant, which includes ports of Turkey, of Bulgaria, and of Roumania, the Piræus, Odessa, Smyrna, Malta, Alexandria, and others in the East, and stations on the Turkish and Bulgarian railways. Two different tariffs are published, one to the "stations of the Turkish and Bulgarian railways," and the other for the above-mentioned places.

Besides the reduced sea freights of the Levant Steamship Company, there are the reduced rates of the Turkish, Bulgarian, and Prussian railways. (For the latter see p. 84 of Blue Book.) The farther the distance of the place of dispatch is from Hamburg the lower is the unit rate charged. The object of these "preferential" rates is officially stated to be "to increase, in competition with other countries, the exportation of similar German products to the Levant by means of a direct service from German places of manufacture, and dispatch to the point of destination beyond the seas, and on the basis of reduced freight charges for the direct forwarding."

EAST AFRICAN TRAFFIC.

After the pattern of the Levant tariff, a so-called "East Africa tariff" ("Deutscher Ost-Afrika Verkehr") was organized on April 1, 1895, in cooperation with the German East African Steamship Line, and a special through preferential tariff was started for goods from the stations of the Prussian and other German state and private railways to the ports of Tanga, Pangani, Saadani, Bagamoyo, Dar-es-Salaam, Zanzibar, Kilwa, Lindi, Mikindani, Ibo, Mozambique, Quilimane, Chinde, Beira, Delagoa Bay (Lourenço Marques), and Durban (Port Natal), and also to the stations of the South African Railway from Johannesburg to Pretoria via Delagoa Bay.

The preferential tariff rates of the Levant traffic are, with very few small exceptions, also in force for this direct service to East African ports, etc. The German East African Steamship Company have cooperated by granting specially low sea freights.

DEVELOPMENT OF GOODS TRAFFIC AT ORDINARY AND AT PREFERENTIAL RATES.

As regards Prussia, the following table shows the increase in receipts on the ordinary tariffs and on the preferential rates section in late years:

RECEIPTS OF GOODS TRAFFIC.—ORDINARY AND PREFERENTIAL RATES.

CLASS OF TARIFF.	1896-97		1895-96		INCREASE.

DEVELOPMENT OF LEVANT, EAST AFRICA, AND OTHER TRAFFIC.

The development of traffic in some goods, to which the more important preferential rates have been granted in late years, is now shown, according to official Prussian railway statistics.

1. For goods exported and subjected to the competition of other countries. From German stations to Levant ports and to stations of the Oriental and Bulgarian railways, via Hamburg, by Levant Steamship Company. The Levant reduced rates are still lower than those in force merely to German ports for direct general exportation by sea. Introduced June 15, 1890.

Before these rates started there was much less traffic. In 1892-93, 12,721 tons were sent at a cost of £8,550 6s.; in 1896-97, 10,262 tons went for £5,933 13s.

2. For goods exported and subjected to the competition of other countries. From German stations to East African ports, and to the Transvaal, via Hamburg, to increase exports of German industries. Introduced April 1, 1895.

Before these rates were introduced there was much less traffic. In 1895-96, 3,589 tons were sent at a cost of £1,555 11s.; in 1896-97, 4,959 tons went for £2,869 7s.

3a. For iron ores, etc., to blast furnaces, introduced May 1, 1893: 2,519,589 tons in 1893-94; 3,623,734 tons in 1896-97.

3b. For coke to blast furnaces, introduced May 1, 1893: 2,363,303 tons in 1893-94; 3,573,585 tons in 1896-97.

6a. Iron and steel of Special Tariffs I and II. Introduced November 1, 1893. From all German iron industrial districts to the ports of Baltic and North seas, and to stations on the coast; 390,446 tons in 1894, 426,209 tons in 1895, and 532,435 tons in 1896.

7. Iron for shipbuilding. From German iron industrial districts to ports on Baltic and North seas. Introduced November 1, 1895. In period November 1, 1894, to October 31, 1895, 14,490 tons carried before this rate began. Then in the period November 1, 1895, to October 31, 1896, 48,892 tons for £23,354.

8. Coal. From Silesia to Stettin and Swinemünde and dependent stations. Introduced March 1, 1896. In period April 1, 1895, to February 29, 1896, 510,382 tons carried before this rate began. Then in 1896-97, 558,344 tons for £257,008 11s.

In concluding this review of the working of the Prussian state railways in 1896-97, it will be of interest to mention that the railway debt in 1895-96 amounted to £261,499,861 (out of a total raised of £351,183,539), on which there was paid for interest—at about a rate of 3.89 per cent—£10,168,164.

RESULTS OF THE WORKING OF THE STATE RAILWAYS.

As regards the working of the state railways as a whole, they seem to have answered extremely well; and their "preferential" rates certainly appear to have effected the desired objects. The public would also seem to have been satisfied, though there were great complaints, especially last year, as to want of rolling stock and consequent dearth of transport facilities in certain districts. The Government, however, now claim that they have added so much new rolling stock that this drawback will not again occur. A charge made against the railway administration in late years is that they have sometimes departed from the original and true principles of the state system by working rather with a view to revenue for the Government than with strict regard to the necessities of the public. The correctness of this allegation has always been energetically denied.

LIGHT RAILWAYS—THEIR EXTENT AND CAPITAL EXPENDED ON THEM.

The question of light railways, which are never state lines, has been attracting more and more attention in Germany as an important means of assisting agriculture. In 1887-88 there were in the country 436½ miles (703 kiloms.) of such lines with an expended capital of £1,805,300, which by 1896-97 had risen to 818½ miles (1,318 kiloms.), with a capital of £3,823,050, or about £4,670 per mile (£2,900 per kilom.). In the latter year the gross receipts were £362,250, and the expenses £243,150, leaving an excess of earnings over expenditure of £119,100, being a yield of $3\frac{1}{16}$ per cent on the invested capital. Their rolling stock consisted of 284 engines, 747 passenger carriages, and 6,325 goods wagons. Of "Personen-kilometer," 100,132,000 were carried, and of "kilometer-tons" of goods, 60,319,000.

It is contended by the Agrarian party that the cost of construction of these narrow-gauge lines, namely, £4,670 per mile, is much too high, and that it is due to the expenditure of unnecessary sums in buildings and other accessories.

OBJECTS OF LIGHT RAILWAYS.

The light railways of Prussia are regulated by a law of July 28, 1892, which kept in view the special object of attracting private capital to this useful agricultural undertaking, which has, of course, only taken place in such districts as afford a promise of a fair return on the money invested. This was not the case with lines started merely with the object of developing the adjoining lands. It was clear from the very beginning that it was only possible to build such lines with certain help. Hence the power given in the law on light railways to the provinces to allot part of their revenues for the furtherance of such lines. Although some provinces, such as Hanover and Westphalia, at once made extensive use of this power, it was not much employed elsewhere until state aid was actually given to these railways.

STATE GRANTS TO ASSIST LIGHT RAILWAYS.

By the law of April 8, 1895, £250,000 was granted for this purpose, and a further £400,000 was added thereto by the law of June 3, 1896. These sums were to be applied to create such light railways as were deemed necessary in the interest of the public, but which could not be built otherwise than with state aid. Up to 1897 some £350,000 had been granted or promised in different forms of subsidy; and these grants were made to railways having an aggregate length of 625 miles. In only one case, apparently, have these subsidies been accorded without stipulating for a return of interest.

A law of June 8, 1887, provided among other things a further sum of £400,000, thus bringing the total up to £1,050,000 for the furtherance of a narrow-gauge network in the interests of agriculture.

In connection with this latter law, £400,000 was at the same time granted for the building of grain warehouses to be erected on the light railways in order to assist agriculture.

ANNEX NO. 1.—STATEMENT OF THE COMMERCIAL RELATIONS OF THE GERMAN EMPIRE WITH FOREIGN COUNTRIES BY TREATY.

There are three distinct classes of commercial treaties existing between the German Empire and foreign countries, which are as follows:

"A." Treaties in which mutual tariff concessions have been made, and in which most-favored-nation treatment has been granted on both sides.

"B." Treaties which contain no special tariff agreement, but only the right to most-favored-nation treatment, either by treaty or by the decision of the federal council, after due authorization by the Reichstag (example, Turkey), among the other usual subjects of agreement. *a*

"C." Treaties in which Germany has granted neither most-favored-nation treatment nor tariff concessions.

NOTE.—The commercial relations of Great Britain and her colonies with Germany are described on pages 11 and 12 of Part I. Briefly, they are now merely general most-favored-nation treatment on both sides, with the one exception of Canada. This mutual arrangement is only temporary and began on July 31, 1898 (on the expiration of the old commercial treaty of May 30, 1865, with the "Zollverein" and of the treaty of navigation of August 16, 1865, with Prussia), and can only extend up to July 30, 1899, under the special law of May 11, 1898, which empowered the Reichstag to grant, at its discretion, such most-favored-nation treatment up to July of next year only.

A.—TREATIES (WITH TARIFF CONCESSIONS BY GERMANY AND MOST-FAVORED-NATION CLAUSES) IN FORCE ON JANUARY 1, 1899.

WITH—	Date of signature.	Date of termination.	Remarks.
Austria-Hungary	Dec. 6, 1891	December 31, 1903 (if 1 year's previous notice be given).	Came into force February 1, 1892; can continue after December 31, 1903, and until expiration of 1 year's previous notice to terminate.
Belgium	Dec. 6, 1891	December 31, 1903 (if 1 year's previous notice be given).	Came into force February 1, 1892; can continue after December 31, 1903, and until expiration of 1 year's previous notice to terminate.
Greece	July 9, 1884	At 1 year's notice.....	Made for 10 years certain; to count from 10 days after date of ratification. Can continue after December 31, 1903, and until expiration of 1 year's previous notice to terminate.
Italy	Dec. 6, 1891	December 31, 1903 (if 1 year's previous notice be given).	Came into force February 1, 1892; can continue after December 31, 1903, and until expiration of 1 year's previous notice to terminate.
Roumania	Oct. 21, 1893	December 31, 1903 (if 1 year's previous notice be given).	Came into force January 1, 1894; can continue after December 31, 1903, and until expiration of 1 year's previous notice to terminate. Modifications of treaty allowed by mutual agreement.
Russia	Feb. 10, 1894	December 31, 1903 (if 1 year's previous notice be given).	Came into force March 20, 1894; can continue after December 31, 1903, and until expiration of 1 year's previous notice to terminate.
Servia	Aug. 21, 1892	December 31, 1903 (if 1 year's previous notice be given).	Came into force January 1, 1893; can continue after December 31, 1903, and until expiration of 1 year's previous notice to terminate.
Switzerland	Dec. 10, 1891	December 31, 1903 (if 1 year's previous notice be given).	Came into force February 1, 1892; can continue after December 31, 1903, and until expiration of 1 year's previous notice to terminate. Modifications of treaty allowable by mutual agreement.

a But under this class Japan and Turkey concede certain tariff reductions on their side only. But there are none on that of Germany.

B.—TREATIES (INCLUDES MOST-FAVORED-NATION TREATMENT) IN FORCE ON JANUARY 1, 1899.

WITH—	Date of signature.	Date of termination.	Remarks.
Argentine Republic	Sept. 19, 1857	At 1 year's notice.....	Made for 8 years certain. Then at 1 year's notice.
Bulgaria.....	[Treaties of 1862, 1890, and 1878]		See treaties with Turkey.
Chile	(Old treaty) 1862.	At less than 1 year's notice.....	Denounced August 27, 1896, but eventually prolonged. Is now again put into force, but the former notice of 1 year to terminate it is reduced to less.
Colombian Republic.....	July 23, 1892	At 1 year's notice.....	Made for 10 years certain; from April 12, 1894, date of ratification. Then at 1 year's notice.
Denmark and colonies	[Various old treaties]		See "State papers" for details.
Egypt	July 19, 1892	March 12, 1912	Came into force April 1, 1893. Modifications are allowable at end of 7th and 14th years.
Ecuador	Mar. 28, 1887	At 1 year's notice.....	Made for 10 years certain; from March 29, 1888, date of ratification. Then at 1 year's notice.
France.....	May 10, 1871	Can not be terminated.....	The Frankfort treaty of peace of May 10, 1871, placed the commercial relations with Germany on a permanent most-favored-nation basis.
Guatemala	Sept. 20, 1887	At 1 year's notice.....	Made for 10 years certain; from June 22, 1898, date of ratification. Then at 1 year's notice.
Honduras.....	Dec. 12, 1887	At 1 year's notice.....	Made for 10 years certain; from July 2, 1888, date of ratification. Then at 1 year's notice.
Japan	Apr. 4, 1896	Tariff (only on the side of Japan): January 1, 1911; rest July 17, 1911 (if 1 year's previous notice be given).	The tariff part comes into force on January 1, 1899; but the rest only on July 17, 1899. To last 12 years certain from date of coming into force. Article XVII, on reciprocal protection of patents, trade-marks, etc., came into force, however, on November 16, 1896. At 1 year's notice after expiry of 12 years.
Liberia	Oct. 31, 1867	At 1 year's notice.....	Made for 12 years certain; from July 1, 1868, date of ratification. Then at 1 year's notice.
Morocco	June 1, 1890	Indefinite	Ratified July 10, 1891; 5 years later, modifications may be mutually agreed upon. Treaty continues in force until such revision occurs or a new convention is concluded.
Mexico	Dec. 5, 1882	At 1 year's notice.....	Made for 10 years certain; from July 26, 1883, date of ratification. Then at 1 year's notice.
Netherlands and colonies	Dec. 31, 1851	At 1 year's notice.....	Ratified May 7, 1852. Good to January 1, 1854. After that, treaty to continue good until expiration of 1 year's previous notice to terminate.
Nicaragua.....	Feb. 4, 1896	April 7, 1907 (if 1 year's previous notice be given).	Made for 10 years; from April 7, 1897, to date of ratification. Continues after that until expiration of 1 year's previous notice to terminate.
Orange Free State.....	Apr. 28, 1897	May 17, 1901 (if 1 year's previous notice be given).	Came into force 2 months after ratification, i. e., on May 17, 1898. Made for 3 years certain. Continues after that until expiration of 1 year's previous notice to terminate. Subsequent modifications allowable by mutual consent.
Paraguay.....	July 21, 1887	May 18, 1908 (if 1 year's previous notice be given).	Made for 10 years; from May 18, 1888, date of ratification.
Peru.....	June 11, 1873	At 1 year's notice.....	To expire only on expiration of 1 year's previous notice to terminate.
Salvador.....	Jan. 12, 1888	August 22, 1899 (if 1 year's previous notice be given).	Made for 10 years; from August 22, 1889, date of ratification. The convention of this date renewed the old 1870 treaty which had been terminated by Salvador on March 25, 1880; it therefore ceased April 1, 1881.
Sweden and Norway.....	Various old treaties.....		See "State Papers" for details.
Tonga	Nov. 1, 1876	No provisions as to termination.....	Came into force on November 1, 1876. There are no provisions as to its termination.
Transvaal	Jan. 22, 1885	At 1 year's notice.....	Came into force 1 month after date of ratification (June 24, 1886), i. e., on July 24, 1886—for 10 years certain. Continues after that until expiration of 1 year's previous notice to terminate.
Tunis.....	Nov. 18, 1896	Indefinite.....	No provisions, apparently, as to termination.
Turkey.....	March 22, 1761a (partly in force still); August 26, 1890 (practically not in force on Turkish side).	March 12, 1912 (tariff only on Turkish side).	The 1890 treaty came into force March 1, 1891, for 21 years certain; but later ceased to have much force in practice. But mutual most-favored-nation treatment is accorded. Modifications are allowed at end of 7th and 14th years. Tariff, however, not yet in force and was indefinitely suspended. The old 8 per cent ad valorem duties are still levied.
United States.....			A commercial treaty between the United States and Prussia was signed in 1828; and it contained a most-favored-nation clause. It appears doubtful if this applies to the Empire. Most-favored-nation treatment usually mutually accorded.
Zanzibar.....	Dec. 20, 1885	July 4, 1901 (if notice of revision be given 1 year previously).	Came into force on August 19, 1886; ratified July 5, 1886. Revision allowed at end of 15 years, if 1 year's notice be given on July 5, 1900. If not, then treaty considered to be prolonged for another 10 years longer.

a Between Prussia and Turkey originally.

C.—TREATIES (CONTAINING NEITHER TARIFF CONCESSIONS BY GERMANY NOR MOST-FAVORED-NATION TREATMENT).

WITH—	Date of signature.	Duration.	Remarks.
China.....	Sept. 2, 1861	Perpetual.....	Can not be revoked.
Congo State.....	Nov. 8, 1894	Perpetual.....	Can not be revoked.
Korea.....	Nov. 20, 1883	Perpetual.....	Can not be revoked. Proposals to revise must be notified 1 year beforehand.
Samoa.....	Jan. 24, 1879	Perpetual.....	Was ratified within the time provided for by Article XII.
Siam.....	Feb. 7, 1862	Perpetual.....	Can not be revoked. Any proposals to revise must be notified 1 year beforehand.

NOTES ON ABOVE TABLES.—B. Treaties.—There had also been treaties giving most-favored-nation treatment with Costa Rica (expired November 30, 1897); with San Domingo (expired January 26, 1897); with Great Britain, including her colonies (expired July 30, 1898); with Hawaii (annexed to United States in 1898, and notice was given that all treaties terminated, but that the old tariffs would temporarily continue to be applied); with Madagascar (annexed to France as a colony in 1896), and with Uruguay (expired July 31, 1897).

Relations with United States.—As to commercial treaties with Germany, there are none, except with the individual States. In a speech in the Reichstag, some years before his retirement, Prince Bismarck mentioned the United States as one of the countries enjoying the most-favored-nation benefits, stating that, as the old treaty with Prussia of 1828 was in force, it was impossible to make a distinction between Prussia and the Empire in the case in point.

As the matter now stands, Germany says that the treaty of 1828 with Prussia has practically been extended to the whole of the Empire, while the United States have taken no positive position in the matter, neither directly confirming nor contradicting this view.

ANNEX NO. 2 (A).—TABLE OF GERMAN TRADE WITH ALL COUNTRIES, 1889 TO 1896, VALUES AND QUANTITIES, CHIEF CHANGES IN IMPORTS (ARRANGED ALPHABETICALLY).

IMPORTS FROM ALL COUNTRIES.	VALUE.		Comparison, 1896 v. 1889, for values.	QUANTITY.		Comparison, 1896 v. 1889, for quantities.

ANNEX NO. 4.—COMPARISON OF BRITISH AND GERMAN SIMILAR EXPORTS, 1895 to 1897. (ONLY "SPECIAL" TRADE, I. E., OF DOMESTIC PRODUCE.)

1. EXPORTS OF COTTON AND COTTON GOODS, IN £1,000.

YEAR.	Great Britain.	German Empire.	Increase or decrease for England.	Increase or decrease for Germany.
	£	£	£	£
1895.....	54,455	11,647		
1896.....	59,309	11,174	+4,854	-473
1897.....	54,061	10,667	-5,248	-507

The German exports, by weight, have been, in the three years: 1895, 90,927; 1896, 96,133, and (89,849, less 3,850 in "improvement" traffic) 85,999 metric tons in 1897.

2. EXPORTS OF WOOL AND WOOLEN WARES, IN £1,000.

YEAR.	Great Britain. ^a	German Empire.	Increase or decrease for England.	Increase or decrease for Germany.
	£	£	£	£
1895.....	20,595	16,814		
1896.....	18,987	16,547	-1,608	-267
1897.....	17,517	16,272	-1,470	-275

^a Raw wool added to make a comparison with German statistics possible.

3. EXPORTS OF COAL, LIGNITE, COKE, ETC., IN £1,000.

YEAR.	Great Britain.	German Empire.	Increase or decrease for England.	Increase or decrease for Germany.
	£	£	£	£
1895.....	^a 15,433	7,288		
1896.....	^a 15,156	8,084	- 277	+796
1897.....	^a 16,659	8,712	+1,503	+628

^a Value of coal shipped for use of steamers engaged in the foreign trade is not included here, as it is not considered to be an ordinary export.

ANNEX No. 4.—COMPARISON OF BRITISH AND GERMAN SIMILAR EXPORTS, 1895 TO 1897, ETC.—Continued

EXPORTS OF COAL, LIGNITE, COKE, ETC., IN 1,000 TONS.

YEAR.	Great Britain.	German Empire. ^a	Increase or decrease for England.	Increase or decrease for Germany.
1895.....	b 33,101	12,886		
1896.....	b 34,262	14,069	+1,161	+1,183
1897.....	b 37,102	14,833	+2,840	+ 764

^a Metric tons.^b Exclusive of coal shipped for use of steamers in foreign trade.

4. EXPORTS OF CHEMICALS, MEDICAL PREPARATIONS, ETC., IN £1,000.

YEAR.	Great Britain.	German Empire.	Increase or decrease for England.	Increase or decrease for Germany.
	£	£	£	£
1895.....	8,288	14,940		
1896.....	8,242	15,839	— 46	+899
1897.....	8,674	15,992	+432	+153

5. EXPORTS OF LINEN AND LINEN GOODS, IN £1,000.

YEAR.	Great Britain.	German Empire.	Increase or decrease for England.	Increase or decrease for Germany.
	£	£	£	£
1895.....	5,351	1,257		
1896.....	5,030	1,199	—321	—58
1897.....	4,774	1,222	—256	+23

6. EXPORTS OF SILK GOODS, IN £1,000.

YEAR.	Great Britain.	German Empire.	Increase or decrease for England.	Increase or decrease for Germany.
	£	£	£	£
1895.....	1,435	8,294		
1896.....	1,423	7,654	—12	—610
1897.....	1,340	6,806	—83	—848

7. EXPORTS OF IRON AND STEEL, IN £1,000.

YEAR.	Iron and steel—Great Britain.	Iron and ironware—German Empire.	Increase or decrease for England.	Increase or decrease for Germany.
	£	£	£	£
1895.....	19,680	15,089		
1896.....	23,801	16,877	+4,121	+1,788
1897.....	24,639	15,730	+ 838	—1,146

8. EXPORTS OF MACHINES, ETC., IN £1,000.

YEAR.	Machines and millwork—Great Britain.	Implements, machines, and vehicles—German Empire. (a)	Increase or decrease for England.	Increase or decrease for Germany.
	£	£	£	£
1895.....	15,150	7,947		
1896.....	17,014	8,020	+1,864	+ 73
1897.....	16,282	8,897	— 732	+877

^a The sum of £40,250, value of ships exported and added for first time in 1897, is deducted from the German total, so as to be comparable with 1896; i. e., £8,938,000, less £40,250, equals £8,897,750.

ANNEX No. 5.—COMPARISON OF GERMAN COMMERCE IN 1896 AND 1897 FOR ALL CUSTOMS TARIFF CLASSIFICATIONS.

Number in tariff.	CLASSIFICATION.	"SPECIAL" IMPORTS.				"SPECIAL" EXPORTS.

^a The "improvement traffic" noted above for 1897 is only that portion of the whole "improvement" trade which is for "inland account," as explained in detail in Report No. 2040, Annual Series (published by Foreign Office in March, 1898).

^b In this category (No. 15) there is included, for 1897, for the first time, the value of ships. That of ships imported was £98,550; that of ships exported was £40,250.

ANNEX NO. 6.—TABLE OF CHIEF INDUSTRIAL SHARES, WITH THEIR QUOTATIONS ON THE BERLIN STOCK EXCHANGE FROM 1885 TO 1898. (HIGHEST AND LOWEST PRICES ARE GIVEN DURING EACH MONTH OPPOSITE THE TWO DATES QUOTED.)

a In accordance with the provisions of the British preferential tariff of 1898, articles which are the growth, produce, or manufacture of the United Kingdom, Bermuda, British West Indies, British Guiana, British India, Ceylon, Straits Settlements, and New South Wales, when imported direct into Canada from any of such countries, are entitled to a reduction of one-fourth of the duty. The reduction does not apply to duties levied on wines, malt liquors, spirits, tobacco, and cigars, nor to raw sugar unless it be imported direct from any British colony or possession, nor to refined sugar unless it be manufactured wholly from raw sugar produced in the British colonies or possessions.

b With an additional charge of 15 per cent on the duty leviable at the rates given.

c With an additional charge of 10 per cent on the duty leviable at the rates given.

d Produce or manufactures of any other of the Leeward Islands, free.

e With an additional charge of 33½ per cent on the duty leviable at the rates given.

a Includes gold and silver in ore.

NOTE.—Gold and silver can not be separately stated in domestic exports before 1864, but it is probable that the greater portion of the exports was gold.

VALUE OF CARRYING TRADE FOR THE MONTH OF FEBRUARY, 1898 AND 1899.

Distribution, by Flag of Carrying Vessel, of the Value of Imports and Exports of Merchandise.

a From L'Economiste Européen, Paris.

b By a law of August 19, 1893, the Banca Nazionale del Regno d'Italia combined with two Tuscan banks and became the Banca d'Italia. This bank and the banks of Naples and of Sicily alone enjoy the privilege of issuing circulating notes.

NEW YORK MONEY MARKET, AND BANK RATES IN LEADING FINANCIAL COUNTRIES OF EUROPE.

^a The collector of customs at San Francisco, under date of February 26, 1886, forwards a statement of his appraiser that the polariscopic test of the Hawaiian sugar brought into that port during the fiscal years 1884 and 1885 would average a little above 93°. The estimated duty remitted has, therefore, since 1883, been computed, on sugar not above No. 13, at 2.12 cents per pound, which is the equivalent of the polariscopic test above indicated.

^b Duty remitted calculated only to April 1, 1891, when sugar imported from all countries was made free.

VALUES OF MERCHANDISE IMPORTED INTO AND EXPORTED FROM THE UNITED STATES IN ITS TRADE

CUSTOMS REGULATIONS.

Duties on imports must be paid in cash.

All entries must be expressed in the currency of the United States, reduced from the equivalent values of foreign currencies.

All goods must be accompanied by a consular invoice. In the event of a failure to comply with this requirement, 25 per cent will be added to the amount of the invoice and duties collected on the increased valuation.

Merchandise from the United States, to be entitled to exemption from duties under the provisions of the treaty, must be accompanied by the Hawaiian consular certificate that the articles are the growth, manufacture or production of the United States. In the event of goods arriving without such certificate, a bond must be given to produce one within six months upon paying a fee of \$2.

PEOPLE, PRODUCTIONS, AND COMMERCE.

MEMORANDA CONCERNING THE SITUATION IN THE PHILIPPINES ON AUGUST 30, 1898.

[By F. V. Greene, Major-General, Volunteers.]

[From S. Doc. No. 62, Fifty-fifth Congress, third session.]

AREA AND POPULATION.

These islands, including the Ladrões, Carolines, and Palaos, which are all under the government of Manila, are variously estimated at from 1,200 to 1,800 in number. The greater portion of these are small and are of no more value than the islands off the coast of Alaska. The important islands are less than a dozen in number, and 90 per cent of the Christian population live on Luzon and the five principal islands of the Visayas group.

The total population is somewhere between 7,000,000 and 9,000,000. This includes the wild tribes of the mountains of Luzon and of the islands in the extreme south. The last census taken by the Spanish Government was on December 31, 1887, and this stated the Christian population to be 6,000,000 (in round numbers). This is distributed as follows:

	Area.	Population.	Per square mile.
Luzon	44,400	3,426,000	79
Panay	4,700	735,000	155
Cebu	2,400	504,000	210
Leyte	3,800	270,000	71
Bohol	1,300	245,000	188
Negros	3,300	242,000	73
	59,800	5,422,000	91

The density of population in these six islands is nearly 50 per cent greater than in Illinois and Indiana (census of 1890), greater than in Spain, about one-half as great as in France, and one-third as great as in Japan and China, the exact figures being as follows:

	Area.	Population.	Per square mile.
Illinois	56,000	3,826,351	68
Indiana	35,910	2,192,404	61
	91,910	6,018,755	64
Spain	197,670	17,565,632	88
France	204,092	38,517,975	189
Japan	147,655	42,270,620	286
China	1,312,328	383,253,029	292

The next most important islands in the order of population are:

	Area.	Population.	Per square mile.
Mindanao	34,000	209,000	6
Samar	4,800	186,000	38
Mondoro	4,000	67,000	17
Romblon	600	35,000	58
Nasbato	1,400	21,000	15
	44,800	518,000	11

Various smaller islands, including the Carolines, Ladrões, and Palaos, carry the total area and Christian population to, area, 140,000; population, 6,000,000; per mile, 43.

This is considerably greater than the density of population in the States east of the Rocky Mountains. Owing to the existence of mountain ranges in all the islands, and lack of communications in the interior, only a small part of the surface is inhabited. In many provinces the density of population exceeds 200 per square mile, or

greater than that of any of the United States, except Massachusetts and Rhode Island. The total area of the Philippines is about the same as that of Japan, but its civilized population is only one-seventh.

In addition to the Christian population, it is estimated (in the Official Guide) that the islands contain the following:

Chinese (principally in Manila)	75,000
Moors or Mohammedans in Paragan and Jolo	100,000
Moors or Mohammedans in Mindanao and Basalan	209,000
Heathens in the Philippines	830,000
Heathens in the Carolines and Palaos	50,000
Total	1,264,000

The Official Guide gives a list of more than thirty different races, each speaking a different dialect, but five-sixths of the Christian population are either Tagalos or Visayas. All the races are of the Malay type. Around Manila there has been some mixture of Chinese and Spanish blood with that of the natives, resulting in the *Mestizos* or half-breeds, but the number of these is not very great.

As seen in the provinces of Cavite and Manila, the natives (Tagalos) are of small stature, averaging probably 5 feet 4 inches in height and 120 pounds in weight for the women. Their skin is coppery brown, somewhat darker than that of a mulatto. They seem to be industrious and hard-working, although less so than the Chinese.

By the Spaniards they are considered indolent, crafty, untruthful, treacherous, cowardly, and cruel, but the hatred between the Spaniards and the native races is so intense and bitter that the Spanish opinion of the natives is of little or no value. To us they seemed industrious and docile, but there were occasional evidences of deceit and untruthfulness in their dealings with us. The bulk of the population is engaged in agriculture, and there were hardly any evidences of manufactures, arts, or mining. The greater number seemed to be able to read and write, but I have been unable to obtain any exact figures on this subject. They are all devout Roman Catholics, although they hate the monastic orders.

In Manila (and doubtless also in Cebu and Iloilo) are many thousands of educated natives, who are merchants, lawyers, doctors, and priests. They are well informed and have accumulated property. They have not traveled much, but there is said to be quite a numerous colony of rich Filipinos in Madrid, as well as in Paris and London. The bibliography of the Philippines is said to number 4,500 volumes, the greater part of which has been written by Spanish priests and missionaries. The number of books on the subject in the English language is probably less than a dozen.

CLIMATE.

The climate is one of the best known in the tropics. The islands extend from 5° to 21° north latitude, and Manila is in 14° 35'. The thermometer during July and August rarely went below 79° or above 85°. The extreme ranges in a year are said to be 61° and 97°, and the annual mean 81°. There are three well-marked seasons, temperate and dry from November to February, hot and dry from March to May, and temperate and wet from June to October. The rainy season reaches its maximum in July and August, when the rains are constant and very heavy. The total rainfall has been as high as 114 inches in one year.

Yellow fever appears to be unknown. The diseases most fatal among the natives are cholera and smallpox, both of which are brought from China. Low malarial fever is brought on by sleeping on the ground or being chilled by remaining without exercise in wet clothes; and diarrhea is produced by drinking bad water or eating excessive quantities of fruit. Almost all of these diseases are preventable by proper precautions even by troops in campaign. The sickness in our troops was very small, much less than in the cold fogs at camp in San Francisco.

MINERAL WEALTH.

Very little is known concerning the mineral wealth of the islands. It is stated that there are deposits of coal, petroleum, iron, lead, sulphur, copper, and gold in the various islands, but little or nothing has been done to develop them. A few concessions have been granted for working mines, but the output is not large. The gold is reported on Luzon, coal and petroleum on Zebu and Iloilo, and sulphur on Leyte. The imports of coal in 1894 (the latest year for which statistics have been printed) were 91,511 tons, and it came principally from Australia and Japan. In the same year the imports of iron of all kinds were 9,632 tons.

If the Zebu coal proves to be of good quality, there is a large market for it in competition with coal from Japan and Australia.

AGRICULTURE.

Although agriculture is the chief occupation of the Philippines, yet only one-ninth of the surface is under cultivation. The soil is very fertile, and even after deducting the mountainous areas it is probable that the area of cultivation can be very largely extended and that the islands can support a population equal to that of Japan (42,000,000).

The chief products are rice, corn, hemp, sugar, tobacco, cocoanuts, and cacao. Coffee and cotton were formerly produced in large quantities—the former for export and the latter for home consumption; but the coffee plant has been almost exterminated by insects and the home-made cotton cloths have been driven out by the competition of those imported from England. The rice and corn are principally produced in Luzon and Mindoro and are consumed in the islands. The rice crop is about 765,000 tons. It is insufficient for the demand, and 45,000 tons of rice were imported in 1894, the greater portion from Saigon and the rest from Hongkong and Singapore; also 8,669 tons (say 60,000 barrels) of flour, of which more than two-thirds came from China and less than one-third from the United States.

The cacao is raised in the southern islands, the best quality of it at Mindanao. The production amounts only to 150 tons, and it is all made into chocolate and consumed in the islands.

The sugar cane is raised in the Visayas. The crop yielded in 1894 about 235,000 tons of raw sugar, of which one-tenth was consumed in the islands, and the balance, or 210,000 tons, valued at \$11,000,000, was exported, the greater part to China, Great Britain, and Australia.

The hemp is produced in southern Luzon, Mindoro, the Visayas, and Mindanao. It is nearly all exported in bales. In 1894 the amount was 96,000 tons, valued at \$12,000,000.

Tobacco is raised in all the islands, but the best quality and greatest amount in Luzon. A large amount is consumed in the islands, smoking being universal among women as well as the men, but the best quality is exported. The amount in 1894 was 7,000 tons of leaf tobacco, valued at \$1,750,000. Spain takes 80 per cent and Egypt 10 per cent of the leaf tobacco. Of the manufactured tobacco 70 per cent goes to China and Singapore, 10 per cent to England, and 5 per cent to Spain.

Cocoanuts are grown in southern Luzon and are used in various ways. The products are largely consumed in the islands, but the exports in 1894 were valued at \$2,400,000.

Cattle, goats, and sheep have been introduced from Spain, but they are not numerous. Domestic pigs and chickens are seen around everywhere in the farming districts.

The principal beast of burden is the carabao, or water buffalo, which is used for plowing rice fields as well as drawing heavy loads on sledges or on carts.

Large horses are almost unknown, but there are great numbers of native ponies from 9 to 12 hands high, possessing strength and endurance far beyond their size.

COMMERCE AND TRANSPORTATION.

The internal commerce between Manila and the different islands is quite large, but I was unable to find any official records giving exact figures concerning it. It is carried on almost entirely by water, in steamers of 500 to 1,000 tons. There are regular mail steamers once in two weeks on four routes, viz, northern Luzon, southern Luzon, Visayas, and Mindanao; also a steamer every two months to the Carolines and Ladrones, and daily steamers on Manila Bay. These lines are all subsidized. To facilitate this navigation extensive harbor works have been in progress at Manila for several years, and a plan for lighting the coasts has been made, calling for 43 principal lights, of which 17 have already been constructed in the most substantial manner, besides 16 lights of secondary importance.

There is only one line of railway, built by English capital, running from Manila north to Dagupan, a distance of about 120 miles. The roads in the immediate vicinity of Manila are macadamized and in fairly good order; elsewhere they are narrow paths of soft black soil, which become almost impassable in the rainy season. Transportation is then effected by sledges drawn through the mud by carabaos. There are telegraph lines connecting most of the provinces of Luzon with Manila, and cables to the Visayas and southern islands and thence to Borneo and Singapore, as well as a direct cable from Manila to Hongkong. The land telegraph lines are owned by the Government, and the cables all belong to an English company, which receives a large subsidy. In Manila there is a narrow-gauge street railway, operated by horsepower, about 11 miles in total length; also a telephone system and electric lights.

Communications with Europe are maintained by the Spanish Trans-Atlantic Company (subsidized), which sends a steamer every four weeks from Manila and Barcelona, making the trip in about twenty-seven days; the same company also sends an intermediate steamer from Manila to Singapore, meeting the French Messagerie steamer each way. There is also a nonsubsidized line running from Manila to Hongkong every two weeks, and connecting there with the English, French, and German mails for Europe, and with the Pacific Mail and Canadian Pacific steamers for Japan and America.

There has been no considerable development of manufacturing industries in the Philippines. The only factories are those connected with the preparation of rice, tobacco, and sugar. Of the manufactures and arts in which Japan so excels there is no evidence.

The foreign commerce amounted, in 1894, to \$23,558,552 in imports and \$33,149,984 in exports, 80 per cent of which goes through Manila. About 60 per cent of the trade is carried in British vessels, 20 per cent in Spanish, and 10 per cent in German.

The value of the commerce with other countries in 1894 was as follows:

[In millions of dollars (silver).]

	Imports.	Exports.
Spain.....	10.5	2.9
Great Britain.....	7.1	8.7
China.....	4.6	6.8
Germany.....	1.9	
Saigon.....	.9	
United States.....	.7	7.4

a Principally to Singapore.

b Principally to Japan.

With these islands in our possession and the construction of railroads in the interior of Luzon, it is probable that an enormous extension could be given to this commerce, nearly all of which would come to the United States. Manila cigars of the best quality are unknown in America. They are but little inferior to the best of Cuba and cost only one-third as much. The coffee industry can be revived and the sugar industry extended, mainly for consumption in the far East. The mineral resources can be explored with American energy, and there is every reason to believe that when this is done the deposits of coal, iron, gold, and lead will be found very valuable. On the other hand, we ought to be able to secure the greater part of the trade which now goes to Spain in textile fabrics, and a considerable portion of that with England in the same goods and in iron.

REVENUE AND EXPENSES.

The budget for the fiscal year ending June 30, 1897, was as follows:

INCOME.		EXPENSES.	
Direct taxes.....	\$8,496,170	General expenses, pensions, and interest.....	\$1,506,686
Indirect taxes (customs).....	6,200,550	Diplomatic and consular service.....	74,000
Proceeds of monopolies.....	1,222,000	Clergy and courts.....	1,876,740
Lottery.....	1,000,000	War department.....	6,035,316
Income of Government property.....	257,000	Treasury department.....	1,392,414
Sundry receipts.....	298,300	Navy department.....	3,562,716
		Civil administration.....	2,195,378
		Education.....	614,895
Total.....	17,474,020	Total.....	17,258,145
The direct taxes were as follows:		Railroads, 10 per cent of passenger receipts.....	\$32,070
Real estate, 5 per cent on income.....	\$140,280	Income tax, 10 per cent on public salaries.....	730,000
Industry and commerce.....	1,400,700	Sundry taxes.....	63,000
Cedulas (poll tax).....	5,600,000	Total.....	8,496,170

		Sundries.....	98,300
		Total.....	298,300

The largest source of income is the cedula or poll tax. Every man and woman above 18 years of age, residing in the Philippines, whether Spanish subject or foreigner, is required to have in his or her possession a paper stating name, age, and occupation, and other facts of personal identity. Failure to produce and exhibit this when called upon renders anyone liable to arrest and imprisonment. This paper is obtained from the internal revenue office annually, on payment of a certain sum, varying, according to the occupation and income of the person, from 75 cents to \$20, and averaging about \$3 for each adult. An extra sum of 2 per cent is paid for expenses of collection. The tax is collected at the tribunal in each pueblo, and 20 per cent is retained for expenses of local administration and 80 per cent paid to the general treasury. This tax falls heavily on the poor and lightly on the rich. The tax on industry and commerce is similarly graded according to the volume of business transacted by each merchant or mercantile corporation. The tax on real estate is absurdly low and is levied only on municipal property and on the rent, not the value.

The tax on imports is specific and not ad valorem; it amounts to about 13 per cent of estimated values. The free list is very small, nearly everything of commercial value which is imported being subject to duty. The revenue from imports has increased from \$566,143 in 1865 to \$3,695,446 in 1894. It was about the same in 1897. On the

other hand, the export tax, which was nothing in 1892, the loading tax, which was nothing in 1893, and the unloading tax, which was nothing in 1894, have all been increased in the last few years in order to meet the expenses of suppressing the insurrection. These three items yielded nearly \$2,700,000 in 1897.

The monopoly of importing and selling opium is sold by auction to the highest bidder for a term of three years. The present contract runs until 1899, and yields \$48,000 per month.

Every legal document must be drawn up on paper containing a revenue stamp engraved and printed in Spain, and every note, check, draft, bill of exchange, receipt, or similar document must bear a revenue stamp in order to be valid. These stamps and stamped paper yielded a revenue of \$646,000 in 1897.

The lottery is conducted by the Government, the monthly drawings taking place in the treasury (hacienda) department. The sale of tickets yielded \$1,000,000 over and above the prizes in 1897.

CURRENCY.

The standard of value has always, until within a few years, been the Mexican milled dollar. The Spanish dollar contains a little less silver, and in order to introduce it and profit by the coinage the Spaniards prohibited the importation of Mexican dollars a few years since. Large numbers of Mexican dollars remained in the country, however, and others were smuggled in. The two dollars circulated at equal values.

All valuations of goods and labor are based on the silver dollar, and a change to the gold standard would result in great financial distress and many failures among the banks and mercantile houses in Manila. Their argument is that while an American 10-dollar gold piece will bring 21 silver dollars at any bank or house having foreign connections, yet it will not buy any more labor or any more hemp and sugar from the original producer than 10 silver dollars. The products of the country are almost entirely agricultural, and the agricultural class, whether it sells its labor or its products, would refuse to accept any less than the accustomed wages or prices on account of being paid in the more valuable coin. The result of this change would be that the merchant and employee would have to pay double for what they buy, and would receive no increase for what they sell. While trade would eventually adjust itself to the change, yet many merchants would be ruined in the process and would drag some banks down with them.

The Mexican dollar is the standard also in Hongkong and China, and the whole trade of the far East has for generations been conducted on a silver basis. Japan has within the last year broken away from this and established the gold standard, but in doing so the relative value of silver and gold was fixed at $32\frac{1}{2}$ to 1, or about the market rate.

PUBLIC DEBT.

I was unable to obtain any precise information in regard to the colonial debt. The last book on statistics of imports and exports was for the fiscal year 1894; and the last printed budget was for 1896-97, which was approved by the Queen Regent in August, 1896. Subsequent to this date, according to the statements made to us by foreign bankers, the Cortes authorized two colonial loans of \$14,000,000 (silver) cash, known as Series A and Series B. The proceeds were to be used in suppressing the insurrection. Both were to be secured by a first lien on the receipts of the Manila custom-house.

Series A is said to have been sold in Spain and the proceeds to have been paid in to the colonial office, but no part of them has ever reached the Philippines. Possibly a portion of it was used in sending out the 25,000 troops which came from Spain to the Philippines in the autumn of 1896.

Series B was offered for sale in Manila, but was not taken. An effort was then made to obtain subscribers in the provinces, but with little or no success. The Government then notified the depositors in the Public Savings Bank (a branch of the treasury department similar to the postal savings bureaus in other countries) that their deposits would no longer be redeemed in cash but only in Series B bonds. Some depositors were frightened and took bonds; others declined to do so. Then came the blockade of Manila, and all business was practically suspended.

No printed report has been made concerning the debt, and I was unable to obtain any satisfactory statement of the matter from the treasury officials. The exact facts in regard to the Series A bonds can be learned in Madrid, but it will be difficult to learn how much of Series B was issued and what consideration was received for them. As already stated, both series of bonds rest for security on the receipts of the Manila custom-house.

MEMORANDUM ON THE MINERAL RESOURCES OF THE PHILIPPINE ISLANDS.

[By George F. Becker, United States Geological Survey (1898).]

This brief memorandum, prepared at the request of Admiral Dewey, probably covers all the main discoveries in the geology of the Philippines which are of economic interest. It is drawn up from data recorded in the Spanish mining bureau (Inspeccion de Minas), but not published, manuscript mine reports by the late William Ashburner, verbal information obtained in Manila, and from various technical publications of Semper, Santos, Roth, Drasche, Abella, and others.

Only about a score of the islands are known to contain deposits of valuable minerals. These are arranged below in the order of their latitude to give an idea of their geographical distribution, and to facilitate finding the islands on the map. The latitude of the northern end of each is taken as that of the island. The character of the valuable minerals stated in the table will afford a general notion of their resources:

MINERAL-BEARING ISLANDS AND THEIR RESOURCES.

ISLAND.	Lat. N. end.	Character of mineral resources.
Luzon	18 40	Coal, gold, copper, lead, iron, sulphur, marble, kaolin.
Catanduanes	14 8	Gold.
Marinduque	13 34	Lead, silver.
Mindoro	13 32	Coal, gold, copper.
Carraray	13 21	Coal.
Batan	13 19	Do.
Rapu Rapu	13 15	Do.
Masbate	12 37	Coal, copper.
Romblon	12 37	Marble.
Samar	12 36	Coal, gold.
Sibuyan	12 30	Gold.
Semerara	12 7	Coal.
Panay	11 56	Coal, oil, gas, gold, copper, iron, mercury.
Bilikan	11 43	Sulphur.
Leyte	11 35	Coal, oil, mercury.
Zebu	11 17	Coal, oil, gas, gold, lead, silver, iron.
Negros	11 ..	Coal.
Bohol	10 10	Gold.
Panaon	10 10	Do.
Mindanao	9 59	Coal, gold, copper, platinum.
Sulu Archipelago	6 30	Pearls.

The distribution of each mineral or metal may now be sketched in somewhat greater detail. In many cases the information given in this abstract is exhaustive, so far as the available material is concerned. The coal fields of Zebu, however, have been studied in some detail by Mr. Abella, and in a few other instances more extended information has been condensed for the present purpose.

COAL.

So far as is definitely known, the coal of the Philippine Islands is all of Tertiary age, and might be better characterized as a highly carbonized lignite. It is analogous to the Japanese coal and to that of Washington, but not to the Welsh or Pennsylvania coals. Such lignites usually contain considerable combined water (8 to 18 per cent), and bear transportation ill. They are also apt to contain much sulphur, as iron pyrite, rendering them subject to spontaneous combustion and injurious to boiler plates. Nevertheless, when pyritous seams are avoided and the lignite is properly handled, it forms a valuable fuel, especially for local consumption. In these islands it would appear that the native coal might supplant English or Australian coal for most purposes. Lignite is widely distributed in the archipelago; some of the seams are of excellent width, and the quality of certain of them is high for fuel in this class.

Coal exists in various provinces of the island of Luzon (Abra, Camarinos, Batan, Sorsogon). The finest beds thus far discovered appear to be in the small island of Batan, lying to the east of the southern portion of Luzon, in latitude 13° 19'. These seams vary from 2 feet 6 inches to 14 feet 8 inches in thickness. Analyses have been made in the laboratory of the Inspeccion de Minas, and the mean of seven analyses gives the following composition:

	Per cent.
Water	13.52
Volatile matter	27.46
Fixed carbon	44.46
Ash	4.56
Sum	100.00

One pound of this coal will convert 6.25 pounds of water at 40° C. into steam at 100° C. The heating effect is about three-fourths of that of Cardiff coal. The same beds are known to exist in other small adjacent islands, Carraray and Rapu-Rapu. A number of concessions for coal mining have also been granted on the main island of Luzon, just south of Batan, at the town of Bacon. No doubt the beds here are either identical, or at least closely associated, with the coal seams in the little islands.

The coal field of southern Luzon is said to extend across the strait of San Bernardino into the northern portion of Samar. Here coal is reported at half a dozen localities, but I have been able to ascertain no details as to the thickness or quality.

In Mindoro there are large deposits of coal in the extreme southern portion (Bulacao) and on the small adjacent islands of Semarara. This fuel is said to be similar to that of Batan.

The islands of Masbate and Panay contain coal, the deposits of which thus far discovered do not seem of much importance. Specimens from the southwestern portion of Leyte, analyzed in the laboratory of the *inspección de minas*, are of remarkably high quality, but nothing definite about the deposit is known to me.

The first discovery of coal in the archipelago was made in the island of Zebu in 1827. Since then lignitic beds have been found on the island at a great variety of points. The most important croppings are on the eastern slope, within some 15 or 20 miles of the capital, also named Zebu. Though a considerable amount of coal has been extracted here, the industry has not been a profitable one hitherto. This is at least in part due to crude methods of transportation. It is said, however, that the seams are often badly faulted.

At Uling, about 10 miles west of the capital, the seams reach a maximum thickness of 15½ feet. Ten analyses of Zebu coal are at my disposal. They indicate a fuel with about two-thirds the calorific effect of Cardiff coal and with only about 4 per cent ash. Large quantities of coal might, I suspect, contain a higher percentage of ash.

The island of Negros is nearly parallel with Zebu and appears to be of similar geological constitution, but it has been little explored and little of it seems to have been reduced to subjection by the Spaniards. There are known to be deposits of coal at Calatrara, on the east coast of Negros, and it is believed that they are of important extent. In the great island of Mindanao coal is known to occur at eight different localities, but no detailed examinations of any kind appear to have been made. Seven of these localities are on the east coast of Mindanao and the adjacent small islands. They indicate the presence of lignite from one end of the coast to the other. The eighth locality is in the western province called Zamboanga, on the gulf of Sigbuguey.

PETROLEUM.

In the island of Zebu petroleum has been found associated with coal at Toledo, on the west coast, where a concession has been granted. It is also reported from Asturias, to the northwest of Toledo, on the same coast, and from Algeria to the south. Natural gas is said to exist in the Zebu coal fields. On Panay, too, oil is reported at Janiuay, in the province of Iloilo, and gas is reported from the same island. Petroleum highly charged with paraffin is also found on Leyte, at a point about 4 miles from Villaba, a town on the west coast.

GOLD.

Gold is found in a vast number of localities in the archipelago from northern Luzon to central Mindanao. In most cases the gold is detrital, and found either in existing water courses or in stream deposits now deserted by the current. These last are called "alluviones" by the Spaniards. It is said that in Mindanao some of the gravels are in an elevated position and adapted to hydraulic mining. There are no data at hand which intimate decisively the value of any of the placers. They are washed by natives largely with cocoanut shells for pans, though the *batea* is also in use.

In the Province of Abra, at the northern end of Luzon, there are placers, and the gravel of the river Abra is auriferous. In Lapanto there are gold-quartz veins as well as gravels. Gold is obtained in this province close to the copper mines. In Benguet the gravels of the river Agno carry gold. There is also gold in the Province of Bontoc and in Nueva Ecija. The most important of the auriferous provinces is Camarines Norte. Here the townships of Mambulao, Paracale, and Labo are especially well known as gold-producing localities. Mr. Drasche, a well-known German geologist, says that there were 700 natives at work on the rich quartz veins of this place at the time of his visit about twenty-five years since. At Paracale there are parallel quartz veins in granite, one of which is 20 feet in width and contains a chute in which the ore is said to assay 38 ounces of gold per ton. One may suspect that this assay hardly represented an average sample. Besides the localities mentioned, many others of this province have been worked by the natives.

The islands of Mindoro, Catanduanes, Sibuyan, Simar, Panay, Zebu, and Bohol are reported to contain gold, but no exact data are accessible.

At the south end of the small island of Panaon, which is just to the south of Leyte, there are gold-quartz veins, one of which has been worked to some extent. It is 6 feet in thickness, and has yielded from \$6 to \$7 per ton.

In the island of Mindanao there are two known gold-bearing districts. One of these is in the province of Surigao, where Placer and other townships show gravels and veins. The second district is in the province of

Misamis. Near the settlement of Imponan and on the gulf of Macajalar there are said to be many square kilometers of gravel carrying large quantities of gold with which is associated platinum. The product of this district was estimated some years since at 150 ounces per month, all extracted by natives with bateas or coconut-shell dishes.

COPPER.

Copper ores are reported from a great number of localities in the Philippines. They are said to occur in the following islands: Luzon (provinces of Lepanto, Benguet, and Camarines), Mindoro, Capul, Masbate, Panay (province of Antique), and Mindanao (province of Surigao). Many of these occurrences are probably unimportant. The great island of Mindanao, being practically unexplored, is full of possibilities, but as yet no important copper deposit is known to exist there. An attempt was made to work the deposit in Masbate, but no success seems to have been obtained. On the other hand, northern Luzon contains a copper region which is unquestionably valuable. The best known portion of this region lies about Mount Data, a peak given as 2,500 meters in height, lying in latitude $16^{\circ} 53'$, longitude $120^{\circ} 58'$ east of Greenwich or $124^{\circ} 38'$ east of Madrid. The range of which Data forms one peak trends due north to Cape Lacay-Lacay and forms a boundary for all the provinces infringing upon it.

Data itself lies in the province of Lepanto. In this range copper ore has been smelted by the natives from time immemorial, and before Magellan discovered the Philippines. The process is a complicated one, based on the same principles as the method of smelting sulphosalts of this metal in Europe and America. It consists in alternate partial roasting and reductions to "matte," and eventually to block copper. It is generally believed that this process must have been introduced from China or Japan. It is practiced only by one peculiar tribe of natives, the Igorrotes, who are remarkable in many ways.

Vague reports and the routes by which copper smelted by natives comes to market indicate that there are copper mines in various portions of the Cordillera Central, but the only deposits which have been examined with any care are those at Mancanyan (about 5 miles west of Mount Data) and two or three other localities within a few miles of Mancanyan. The deposits of Mancanyan are described as veins of rich ore reaching 7 meters in width and arranged in groups. Mean assays are said to show over 16 per cent of copper, mainly as tetrahedrite and allied ores. The gangue is quartz. The country-rock is described as a large quartzite lens embedded in a great mass of trachyte. An attempt has been made by white men to work these deposits, but with no considerable success. The failure does not seem to have been due to the quality or quantity of ore found.

LEAD AND SILVER.

A lead mine has been partially developed near the town of Zebu, on the island of the same name.

The most important deposit of argentiferous galena is said to be at Torrijos, on the small island of Marinduque (latitude $13^{\circ} 34'$). A metric ton, or 1,000 kilograms, is said to contain 96 grams of silver, 6 grams gold, and 565.5 kilograms of lead.

In Camarines, a province of Luzon, lead ores occur, but are worked only for the gold they contain.

IRON.

There is iron ore in abundance in Luzon, Carabello, Zebu, Panay, and doubtless in other islands. In Luzon it is found in the provinces of Laguna, Pampanga, and Camarines Norte, but principally in Bulacan. The finest deposits are in the last-named province, near a small settlement named Camachin, which lies in latitude $15^{\circ} 7'$ and longitude $124^{\circ} 47'$ east of Madrid. A small industry exists here, wrought iron being produced in a sort of bloomery and manufactured into plowshares. The process has not been described in detail, so far as I know. It would appear that charcoal pig iron might be produced to some advantage in this region. The lignites of the archipelago are probably unsuitable for iron blast furnaces.

QUICKSILVER.

Rumors of the occurrence of this metal in Panay and Leyte have failed of verification. Accidental losses of this metal by prospectors or surveyors sometimes lead to the reports of the discovery of deposits, and others are not seldom mistaken for impure cinnabar.

NONMETALLIC SUBSTANCES.

Sulphur deposits abound about active and extinct volcanoes in the Philippines. In Luzon the principal sulphur deposits are in Daclan, in the province of Benguet, and at Colasi, in Camarines. The finest deposit in the archipelago is said to be on the little island of Biliran, which lies to the northwest of Leyte.

Marble of fine quality occurs on the small island of Romblon (latitude $12^{\circ} 37'$). It is much employed in churches in Manila for baptismal fonts and other purposes. Marbles are also quarried at Montalban, in the province of Manila, and at Binangonan, in the province of Marong.

There are processions for mining kaolin at Losbanos, in Laguna province.

Pearl fisheries exist in the Sulu archipelago, and are said to form an important source of wealth.

MANILA, *September 15, 1898.*

A SKETCH OF THE ECONOMIC CONDITION OF THE PHILIPPINES.

[By Max L. Tornow, August, 1898.]

The general interest in the Philippines, which for a long time seems to have been all but forgotten by the rest of the world, was again thoroughly awakened by the recent cannonade off Cavite; and, even with the final settlement of the Philippine question, it is scarcely to be expected that the islands can again fall into forgetfulness. A glance, therefore, at the economic condition of the country would appear not to be out of place, accompanied by a few more important statistics, for an exhaustive consideration of the subject would occupy far more space than the present pamphlet admits of.

1. Commencing with the produce of the soil, two important points strike us as speaking to the varied and fertile character of the land: The geographical position of the islands—embracing sixteen degrees of latitude—and the plentiful supply of water. On the other hand, in addition to smaller obstacles raised by the administration, particularly as regards large plantations, the want of labor militates seriously against industrial extension, so that of the arable land only a very small part is to-day under cultivation. The result is that, notwithstanding the richness of the soil, we find that the total returns are nothing like what they should be.

Not only do all tropical fruits flourish, but also the plants of the temperate zones, such as wheat, barley, and potatoes. Experiments were made with wheat and barley some years ago, and met with every success; and there is to-day a German planter in Benguet cultivating potatoes. I am fully convinced that in certain parts the vine could be grown, and at all events those fruits which demand a mild climate. Attempts have been made with tea to a little extent, and the results have not been unfavorable; but to all extensive planting (and this is the only way in which it is remunerative) the want of railways, good roads, and laborers offers the greatest difficulty. Not less annoying is the attitude assumed by the Spanish officials and the monks, unless the planter is ready to dance at their command.

The principal agricultural products exported are sugar, hemp, and tobacco, and to some extent coffee, the cultivation of which, however, has of late greatly decreased. Indigo, sapanwood, and copra must not be left unmentioned, for they may certainly be expected to take a higher place in the Philippine trade in the future than to-day is the case. Rice and maize are only grown for home consumption, and even for this purpose the supply is not large enough. Rice is imported from Saigon and Bangkok and cocoa from Java, although the extremely fertile soil of the Philippines could produce all that is required at home and enough to admit of a large export trade as well.

Formerly, in 1850 to 1860, or even later, rice was exported from the islands, but the quantity gradually decreased until exportation ceased altogether, and finally the grain began to be imported. The blame lies with the miserable administration of the country. The planters can no longer compete with Rangoon, Saigon, and Bangkok, where the authorities know how to meet the farmers when necessary, and where the ships are not exposed to endless chicanery, such as is practiced by the Manila custom-house officials. For this reason most foreign vessels are careful to steer clear of the latter port. Sugar is chiefly exported from the Visayas Islands, and the trade is almost exclusively over Iloilo, the largest place after Manila, situated on the island of Panay. Zebu, the third largest port of the archipelago, does now but a small and steadily declining trade in hemp.

The best tobacco grows in the north of Luzon, in the Province of Isabella, and the south of Cagayan, the most northern province of that island, in the valley of the Rio Grande de Cagayan. The northern provinces of Luzon, from the Gulf of Lingayen in the west to the Pacific, are separated from Manila by a range of high mountains, the Caraballo, over which there is, with the exception of a path and the telegraph, no road whatever, much less a railway. The tobacco, therefore, is sent on covered boats, so-called "barangaijanes," down the Rio Grande to Aparri, and there shipped by steamer to Manila. A flat-bottomed steamboat also runs from Ilogan, when the water allows it; otherwise she only goes as far as Tuguegarao. In this way the transport from the most southern tobacco center, Echague, which, as the crow flies, is only about 150 miles, often takes quite three weeks.

Tobacco has also been planted on the west coast of the northern part of Luzon, and also on the Visayas Islands. This, however, is of inferior quality and is mostly exported to Spain. In Manila it is not used, unless perhaps by the Chinese factories for the manufacture of inferior cigarettes. Regarding the tobacco monopoly, abolished in 1883, I shall have some remarks to make later.

An important and world-famed article is Manila hemp, or abaco, a product of the *Musa textilis*. It is remarkable that, although there are the most varied species of the *Musa* flourishing all over the Tropics and in warm climates generally, the *Musa textilis* appears to thrive to the best advantage only in the Philippines. Attempts to grow the plant in other places have been uniformly unsuccessful. Like its better-known relative, the edible banana (*Musa paradisiaca*), the stem of the plant is formed by the leaf-stalk, in the center of which again is the

blossom-stem. The finest growth is obtained in the volcanic and rainy districts of the Philippines, especially in the Camarines Sur, Albay, Samar, Leyte, Marinduque, Zebu, and in some of the small neighboring islands, as well as on the South Negros and Mindanao.

The valuable hemp fiber is found in the petioles, from which it is taken before the plant has borne fruit, as otherwise the fibers lose in elasticity and luster. In two or three years the plant is generally so far matured that it can be cut down, the leaves removed, the green epidermis stripped from the stem, and the bast strips either torn off lengthwise or the petioles separated singly, and the inner membrane with the pulpy portion of the plant as well as possible removed. The bast strips thus obtained are then drawn under a knife, in order to scrape away any pulp that may have remained on them. The product after having been dried in the sun is then ready for shipment. This process, though simple, involves a great loss of fiber, which might be avoided by the use of more efficient stripping machines. It is difficult to accustom the native to anything novel; but when once progress has gained a general footing headway will soon be made in particular paths also. Manila hemp has so far been equaled by none, much less excelled.

The principal article is fair current, with its higher and lower grades. Of less importance is quilot and the silklike lupiz, which, besides their use in the manufacture of fine native fabrics, are also employed for superior toilet articles in Europe, especially in the ladies' hat trade. From the current sorts excellent ship's cables and miner's ropes are made, and in America, where great quantities are consumed, they are used to make grain binders for harvesting. Hemp comes on the market in bales of 2 Spanish piculs (280 pounds English). The price varied much, being subject often to great fluctuations, which naturally gave rise to speculation. About the middle of the present century the price varied between \$4 and \$5 (with high course of exchange), steadily rising; in the sixties we find it already at \$7 to \$9; in the eighties, \$11 was the average. In 1890 it was artificially pushed up to \$17—an immense crash being the natural result—and all this at a high or even higher course (3s. 3½d. to 3s. 11d. per \$1.)

The course now began to fall steadily until, after the outbreak of the war, it stood at 1s. 10½d. Of late the prices for fair current have been between \$6 and \$9 per picul, at a course of 2s.; and at the end of April the ton was sold in London at £19. During the blockade of Manila the price was pushed to nearly £40. At the end of the war it fell again to £28.10. The table opposite shows the fluctuation of the course and price of hemp from January 1, 1892, to April 21, 1898, when the war broke out.

In 1818 261 piculs at \$4 were exported. There is no record of the exportation of hemp until 1840. In this year the amount exported is stated to be 136,031 piculs (8,502 tons). Thirty years later, in 1870, the amount had risen to 488,560 piculs (30,535 tons). The export then increased still more considerably. The following figures show how it has stood during the past six years:

YEAR.	Piculs.	English tons.
1892.....	1,581,100	98,818
1893.....	1,282,942	80,184
1894.....	1,591,962	99,497
1895.....	1,664,590	104,038
1896.....	1,531,810	95,738
1897.....	1,689,754	a 105,610

a From Manila only.

The chief consumers are England and the United States. The relative consumption by the different countries in 1896 is seen from the following table:

COUNTRY.	Piculs.	English tons.
England.....	815,044	50,940
United States.....	615,554	38,473
China and Japan.....	49,494	3,093
Australia.....	33,892	2,118
Singapore, India.....	12,166	760
European Continent.....	5,660	354
Total.....	1,531,810	95,738

The difference between the large export to England and the small amount which goes to the Continent—the very last on the list—is striking. England, however, acts here only as middleman, selling extensively again to the Continent, which accordingly buys at second or, rather, third hand.

Various species of the cocoanut palm are found dispersed throughout the whole archipelago, though the exportation has only been considerable during the last few years. Under a more satisfactory state of affairs in the interior of the country the export trade in copra promises to increase still further, in spite of the large consumption of the nuts by the natives themselves. The meat of the cocoanut forms a staple article of food, both raw and prepared artificially.

The archipelago is very rich in timber, notwithstanding that the exploitation for building purposes has been going on for over three hundred years, and exportation formerly especially was very large; nor have new plantations ever been thought of. Sapan wood for dyeing purposes is also a product of the islands, and there is a regular, though small, export done in it. * * *

Cattle breeding has been carried on by some mestizos for many years, evidently with success, or the business would have died out. Of late it has been found more profitable to import the extremely cheap Queensland cattle; but the fact that cattle thrive nearly everywhere is a proof that cattle breeding on an extensive scale is possible. A small number of sheep are imported from China for consumption by foreigners. It is by no means improbable, however, that in some provinces, at any rate, they would thrive well. There are but few goats. Of swine and poultry, on the other hand, there is a surplus, the flesh of the former especially forming a favorite dish of the natives.

In addition to the small but very tough horses, resembling those of Java, that most useful of domestic animals, the carabao, or black (gray) buffalo, thrives to the best advantage. The white species is also occasionally to be found. The buffalo is employed for many purposes—for working the pumps on plantations, for sugar presses, etc., and is also used as a beast of draft. In the mountains the buffalo is met with in the wild state; it is, however, undoubtedly only the domestic species which has been neglected. Nevertheless, in the course of years, the degeneration has been so great that there now exists a clear distinction between the wild and the domestic buffalo. The wild animal has a more compact head and short horns, while the domestic animal has a long head with long, broad horns. Neither horses nor buffaloes are indigenous to the Philippines; they have been imported by the Spaniards.

2. Nor is it alone the arable land which forms the resource of the country, little regarded as this source of wealth has unfortunately hitherto been. There is another, and doubtless not less valuable, property, represented by the mineral riches now silently slumbering beneath the soil.

The islands yield pit coal, iron, gold, silver, copper, etc., for the most part of good quality, and recently petroleum has been struck. Careful and expert explorations have several times been undertaken by engineers, yet never to the extent necessary to start lucrative mining, nor yet over a sufficiently extensive area. The former "inspector-general de montes," Don Jose Centeno, and Don Antonio Hernandez are deserving of special mention for their exploration in this direction.

Coal is probably spread over the whole archipelago. It was first discovered in 1827 in the island of Zebu; then in Negros, Mindanao; on the island of Luzon, in Camarines and Albay, and in many other islands. The wealth thus appears almost inexhaustible. The coal in Zebu is of the best quality, numerous experiments having shown it to be equal to Newcastle coal. Hernandez found four seams running parallel from north to south at a small depth, and 95 miles long. In 1874 four further seams were found where Don Isaac Conui worked the Caridad and Esperanza collieries in a small way. In Albay, 1 mile southeast of the small harbor of Sugod, is one of the most extensive of the many seams which have been found in Albay. It is 5 or 6 yards deep, and runs for a long distance. From this mine, from different places over a distance of a mile or more, 130 tons of coal were dug and practically tried on some steamers.

According to the reports of the man-of-war *Berenguela* and the steamships *Butuan* and *Corregidor*, which experimented with the coal, the latter resembles that of Australia, with the advantage of being less bituminous. This is an agreement with the scientific analyses and experiments of the coal made in Madrid. Small workings were begun, but exploitation corresponding to the worth could not be looked for, as with the fickle Government and administrative mismanagement, capitalists feared to finance such undertakings. Especially in the way of foreigners the Government put every possible hindrance, so that a profitable return seemed questionable, and the capital invested in danger. The workings were consequently very limited, and up till this day Australia and Japan export coal to Manila, a state of things which, it may be hoped, will soon be changed.

Iron, also, has been found in many of the islands. The best is that in Luzon, in the provinces of Morong, Laguna, Bulacan, Nueva Ecija, Pampanga, and Camarines, which, according to Centeno, compares most favorably in quality with that of Sweden. The ore contains from 75 to 80 per cent pure iron, and is found in the midst of immense forests, so that there is thus a permanent supply of fuel, if properly used. In addition to this, there is often water power in the neighborhood which could be profitably utilized. In the above-mentioned provinces, Centeno discovered large masses of almost pure magnetic iron oxide (*hierro oxidulado magnetico, casi puro*). After what has been said above, it is not surprising that here, also, there has been no thorough exploitation. In

the province of Bulacan the natives manufacture a very primitive iron plowshare and pots for cooking (carahays); but even here there has been a gradual decline since the commencement of this century.

Copper exists in the provinces of Tayabas, Camarines Sur, and Antique and on Masbate; the best quality, however, in the district of Lepanto (Luzon) near Mancayan, Suyuc, Bumuan, and Agbao. Here mines were worked by the Compañía Cantabro-Filipina, but abandoned after about ten years, in spite of the wealth of mineral, on account of the scarcity of labor. The first specimen of black copper was obtained in 1864. In 1867 the output was 2,164 quintales (2,231 cwt. 83 lbs.) of fine copper; in 1870, 4,020 quintales (3,641 cwt. 8 lbs.). The want of workmen then caused the yield to decline, until in 1875 the mines were closed altogether.

It is probable that gold occurs in every part of the archipelago. In a small way it has been extracted by the natives for many years in certain places, particularly in Luzon. It is found in stratified, and in creeks, from which the natives prefer to wash it. The best known sources are in Camarines Norte, the mountains of Mambulao, Paracale, and Labo, and the northern spurs of the Carabello Mountains. Alluvial gold is said to exist largely in Nueva Ecija, near the village of Capan; in Tayabas the metal is found in the mountains in the neighborhood of the village of Antimonon. In Mindanao, where gold has likewise been discovered, it is believed to be present in particularly profitable quantity. Mindoro, Panay, as well as some other small islands, are also places where the precious metal has been found.

It now remains to inquire into the question as to whether it would pay to work gold mines at all. For as yet, at all events no positive proof has been furnished of gold mines being profitable, although during the last few years the subject has been discussed. In 1893 the Mambulao Gold Mining Syndicate was formed in London, engineers sent out, and workings actually commenced in Mambulao. Difficulties, however, arose, the principal no doubt being that a large part of the shares were not allotted, and the working capital therefore too small. In general, the participators speculated on the advantageous sale of a part of their concession and the starting of a limited liability company. Something of a gold fever broke out in Manila, and on all sides concessions were acquired by Englishmen, some Germans, and Swiss. Not one of these concessions, however, seemed the result of a sound bona fide project; the object in view was always the promotion of companies and disposal of the concession at a good profit, leaving all the risk to the shareholders. It is not impossible that this would actually, in some cases, have taken place, and a speculation in shares followed similar to that on a former occasion in Singapore and Hongkong, to the detriment of general trade. The rebellion of 1896 fortunately put an end to speculation; European capital for such purposes was not to be found during the disturbances, and methodical working in some provinces was equally impossible, quite apart from the other difficulties mentioned above.

Centeno further states that mercury was formerly found in various places. At the end of the last century a bottle was sent to Manila from Mindanao, and a second from Capiz. In 1848 mercury was discovered in Casiguron, in the province of Albay, but the general opinion was that the find was altogether insignificant. At all events, none of these discoveries appear to have been of any importance.

At the beginning of the seventies two beds of galena were discovered in Zebu, in the neighborhood of the village of Consolacion. Specimens were analyzed at the mint at Manila, and showed, it is true, only 47 per cent of lead, but also 1 ounce gold and 2 ounces silver per hundredweight. Nevertheless, the beds were not of sufficient significance to assure profitable working even on a small scale, so the mines were again abandoned. The department of mines in Manila did certainly recommend further exploration in Zebu, but so far as I am aware earnest steps were never taken. In Mambulao and Paracale the beds of galena and red-lead ore have been got ready for working, and are probably very rich. The workings, however, have always been abandoned again, presumably, chiefly, on account of these Spanish undertakings being insufficiently financed from the commencement, and because of the lack of the necessary circumspection.

There is naturally an abundance of sulphur in this volcanic archipelago. That which occurs on the Bulusan, in Albay, the Taal, in Batangas, and the Apo, in Mindanao, being of fairly pure quality. Really extensive beds, worthy of exploitation, were found years ago in Leite, in the interior, not far from Dulag, and were worked on a small scale by the natives. In 1818, 3,410 piculs, at \$2.50, were exported, and Dr. Jagor states that the price paid in Manila for this sulphur in the fifties was from \$1.50 to \$4.50. For the last twenty years, however, the sulphur industry has been wholly dead.

Alabaster is found in Camarines Sur, and there is a beautiful marble at Bohol and Guimaras, near Iloilo. Granite of excellent quality is quarried at the other side of the Bay of Mariveles, opposite to Manila.

Rock oil was found some years ago in Zebu and Paragua and promises to be of importance. I have neither seen samples nor come across any official report in the matter, but I have received direct information from various trustworthy Indians and Mestizos.

3. With the exception of the cigar manufacturing, which until January 1, 1883, was monopolized by the Government, the islands are not of industrial importance. Manila possesses two large sugar refineries, some distilleries, and rope works. Lately rice mills and a flour mill have been set up in Luzon for the purposes of home

consumption. The hats made by the natives of strips of reeds in Baliuag also play an important part in the export trade, being shipped largely to America and Paris. The cigar cases (petacas), likewise manufactured in Baliuag, are of less importance. Though of no great significance for the trade, the ilang ilang essence should be mentioned, the Philippines being the only place where it is produced. The essence is made from the green blossom of the ilang-ilang tree, one of the Anonaceae ("Anona odoratissima," according to Blanco; "Cananga odorata," according to Hook), and finds its way principally to Paris. It forms the basis of all finer quality perfumes, and has, indeed, become an almost indispensable article in the perfumery branch. The distillation of the essence, and the business in general connected with it, is carried on exclusively by Germans.

Coach building is of great importance in Manila. The home demand is enormous, as every inhabitant of any standing has his carriage, and the wealthier mestizos excel in the luxury of their vehicles.

That soap and other such articles of popular use are manufactured is scarcely necessary to state. There are also three lithographic establishments, owned by Germans.

Besides the Baliuag industry, above referred to, the natives manufacture excellent homespun fabrics of cotton, hemp, silk, and pinā (the fibers of the pineapple leaf); pinā-cloth embroidery is also a domestic industry. These articles do not rank at all in the export trade of to-day, but they may certainly be expected to do so before long; the more so if the industry continues to advance as it has done during the past year or so, not only as regards the fabrics themselves, but also the designs and colors. Some coarse hemp textiles have already been exported within the last few years: the finer hemp and hemp and silk fabrics, though much prized by ladies for dressmaking, have not yet entered into the trade, not having so far found favor with the Parisian costumers. A most interesting exposition of the produce of the Philippines was afforded by the exhibition (Exposition Regional de Filipinas), which was held at Government cost at Manila in 1895.

It is certain that the Philippines, whose position is already assured by the mineral wealth of the country, will also play a part in the industry in the future equal to, if not surpassing, that of Japan.

4. There seems to me to be no doubt that even before the arrival of the Spaniards these islands had relations with the Malay Archipelago and China, and to a certain extent carried on barter, particularly with the latter country. Regular trade, however, first began to develop in 1572, when Legaspi established himself in Manila. The inhabitants of Cagayan related to Don Juan de Salcedo in 1572 that their cotton fabrics were fetched every year by Chinese and Japanese vessels.

Manila is without doubt the most advantageously situated port and trading place in the East, and forms the center of the trade between China, Japan, the Dutch archipelago, and Australia. The position of the Philippines is likewise extremely favorable for the west coast of America, and Manila should be the natural mart of Eastern Asia. * * *

During the northeast monsoon most ships going through the straits to China run right across to Luzon, to get protection against the strong contrary winds. It would therefore be quite in their course to touch at Manila; but they avoid the port for the reasons stated above—the chicanery of the customs officials. For the same reason the regular steamers between Hongkong and Australia steam right past the Bay of Manila without running in. Passengers from Manila to Australia have, therefore, first to cross to Hongkong and then take passage from there, returning again directly past Manila and Zamboanga (so close to the latter that the people may almost be recognized on the shore) to the first touching place—Thursday Island, or Port Darwin.

After 1572 trade commenced also between Manila and New Spain, which for individual Spaniards in Manila proved very profitable. Between 1590 and 1595, however, the citizens of Manila petitioned several times to the King for liberty of trade, but always in vain; the restriction on commerce remained as before. In 1610 the Seville merchants begged that the trade between Manila and New Spain might be closed, as they wanted to do business direct, by the Cape, with Manila, without the intervention of the American colonies. This was, nevertheless, impossible, on account, principally, no doubt, of the fact that the Acapulco silk trade gave occupation to over 14,000 persons in Mexico.

Galleons were sent every year from Manila to Navidad, and from 1602 to Acapulco, containing merchandise to the value of \$250,000, maximum admitted by the Government, and bringing back double the price. Later this maximum rose to \$300,000, and in 1734 to \$500,000. Finally the amount reached \$600,000, and the home freight double the value. From Manila the galleons—called "nao"—took spices, cotton fabrics, silks, etc., and gold articles and other products of China, India, and the Philippines; 50,000 silk stockings are also especially mentioned. (Refer: Lord Anson's Journey Round the World, 1749, and the description of Spanish commerce by J. C. S., Dresden, 1763.) The home freight consisted chiefly of silver dollars; and there were also passengers, persons going to seek their fortune in the Philippines, and officials and soldiers sent out by the Madrid Government as substitutes.

The merchandise yielded twice its value in Manila, and as is recorded sometimes even four times, which in certain cases may no doubt have been the case. The profit, however, did not all go into one pocket, but was

divided among a number. The Government issued warrants (boletins) remitting the shipping of cargo to the monasteries, pensioned officials, and other privileged persons, who then sold them to the merchants; in this manner the profits were distributed. The result was that merchandise of very high value was shipped, and the nao often so packed with cargo that the guns had to be stowed away. On the home journey there was often over \$3,000,000 value on board. As these ships were maintained at the expense of the Government, it is natural that a portion of the shipping fees was reserved for the royal exchequer.

Generally the well-laden nao sailed from Cavite in July, steering to northward to 30°, where, taking advantage of the western winds, they made for the shores of California, then coasting southward to Acapulco. The voyage was always most difficult and dangerous, and often very long, lasting sometimes six months or more. In later years the ships sailed more commonly through the straits of San Bernardino, south of Luzon, though this did not shorten the voyage. Arrived at the Californian coast, they ran into San Lucas, where they took in provisions and received information as to the movements of pirates in the waters, naturally a matter of great concern, considering the value of the cargo. The home voyage to Manila was easier and quicker, seldom occupying more than two months. The ship sailed southward from Acapulco till about 10° N., taking the passage to the Marian Islands, and then farther, through the straits of San Bernardino, to Manila. As the time arrived when the nao could be expected, nightly fires were lighted on two high rocks, so that the vessel might find her way through the islands. (In old works the islands Guam and Rota are mentioned.)

The naos were vessels of 1,200 tons or even more, and were manned as war ships and armed with 50 or 60 cannon. Notwithstanding this, they sometimes, together with their costly cargo, fell a booty to privateers, pirates, and war ships of inimical powers. In June, 1743, Lord Anson, on board the *Centurion*, captured the *Nuestra Señora de Cabadonga*, a much larger galleon, captained by Don Jeronimo de Montero, off Cape Espiritu Santo, on the Samar coast.

The captain of the galleon, who bore the title "general," received on the Acapulco trade a percentage of about \$40,000 for each voyage; first officers, likewise, were paid commissions.

Toward the end of the last century the profits began to decline, decreasing more and more; sometimes the ships even found the market in Acapulco perfectly flat, without any demand. This was because of American traders, and of English merchants supplying all the requirements direct from Europe; smuggling also played its part. Thus it happened that the ships were often unable to return for long periods of time. The last nao which left Manila, in 1811, did not return from Acapulco until 1815.

In 1785 the Real Compañía de Filipinas was started, having its seat in Cadiz, and with a capital of \$7,000,000. This company more or less monopolized the whole trade, until on August 15, 1789, a decree was issued permitting European vessels to import Asian produce, and to import only such Spanish, Philippine, and American produce as the compañía had imported. A second decree, dated October 15, 1803, deprived the compañía of still further privileges, and declared the harbor of Manila open to all nations. Certain rights the compañía still retained, however. In 1814 absolute liberty of trade was allowed to the whole world. As a result of the introduction of the new Código de Comercio, July 15, 1833, the privileges of the compañía ceased altogether in 1834. A year later the exportation of manufactured tobacco and cigars was also permitted.

Until the close of the preceding century, 1792, foreigners were not allowed to settle in Manila (although Laperouse, 1787, mentions the French merchant Sébir in this town). As soon as the permission was granted the first foreign houses were established, the number continually increasing, so that to-day the external trade is almost exclusively in foreign hands; 1851 saw the establishment of the Banco Español Filipino, but by reason of bureaucratic formalities and strict limits imposed transactions were much impeded. It is only in recent years that matters have bettered, rendering fair and easy banking business possible. Up to 1860 and still later banking transactions were therefore done almost wholly through two large American houses. To-day we find branches of the Chartered Bank of India, Australia, and China, and of the Hongkong and Shanghai Banking Corporation doing the principal business.

The Consulado, established in 1772 and removed on January 1, 1834, and the Junta de Comercio, founded on January 1, 1835, have done practically nothing at all for trade and shipping. The export and import trade, as already remarked, lies almost exclusively in the hands of foreigners, principally English, Germans, and Swiss. The retail and intermediate trade is done by the Chinese. The Spanish, in addition to the Compañía General de Tabacos de Filipinas—which, however, pays but a small dividend—and some inland traders, own a number of millinery shops for town costumes, and cosmetic stores.

How greatly the trade done by foreigners surpasses that of the Spanish is seen from the tables below, giving the external shipping trade and tolls. Since 1896 there has been no American house in Manila.

The traffic between Manila and the provinces is carried on mostly by means of thirty-five steamers and a large number of smaller sailing vessels. The sole railway runs from Manila to Dagupan, the port of Pangasinan, a rice-growing province, on the west coast of Luzon, on the Gulf of Lingayen. The only large line of ships touching

at Manila is the *Compañía Transatlántica*, from Barcelona to Manila, which, however, also has Liverpool as a shipping port, as the steamers would otherwise scarcely be able always to secure a full cargo. The chief profits of the line are no doubt earned from the enormous transport to and fro of officials and soldiers; in nearly every ship all berths are occupied. There is a brisk trade done with Hongkong, through four or five steamers under the British flag; for the largest part of the goods goes over Hongkong, being transshipped. A steamer runs to Singapore, meeting the French mail steamer, by which the principal European postal traffic is carried on.

Despite the fact that the foreign flag was everywhere at a disadvantage, and the Spanish, on the contrary, privileged, the former has always been the really dominating. Though formerly foreign vessels were obliged to run in in ballast, nevertheless they took outward freight. The privilege shown to the Spanish flag did not cease till 1872, and consisted at that time in a reduction of 25 per cent on the custom-house charges. This was gradually diminished every year by 5 per cent, and in the last year by 10 per cent at once.

The following table shows the state of the shipping trade in Manila in earlier years:

	1827		1828		1829	
	Incom- ing.	Out- going.	Incom- ing.	Out- going.	Incom- ing.	Out- going.
Foreign ships.....	96	98	99	89	146	145
Spanish ships.....	34	29	31	38	41	43
Total	130	127	130	127	187	188

In 1868, 112 foreign vessels with 74,054 tons, mostly in ballast, entered to take up cargo, and 93 Spanish vessels entered and sailed with cargo. To show a comparison of the trade during the past two years, I have compiled the following table:

	INCOMING.		OUTGOING.	
	Ships.	Tonnage.	Ships.	Tonnage.
1896.				
Foreign.....	181	264,868	175	251,439
Spanish.....	47	92,541	49	95,802
Total	228	357,409	224	347,241
1897.				
Foreign.....	204	301,199	197	292,219
Spanish.....	48	81,326	50	88,649
Total	252	385,525	247	380,868

At the commencement of the century the imports were far greater than the exports; then the two became about equal, and finally the exported goods ranked first. In recent years the exports have always exceeded the imports by some 30 per cent—a very promising sign of the productive capacity of the country.

The imports to Aragon in 1818, according to the duties paid, amounted to—

Under foreign flag.....	\$1,680,200.25
Under Spanish flag.....	616,071.85
Total.....	\$2,296,272.10

as against an exportation of—

ARTICLES.	Quantity.	Average price.	Total.
Hemp.....piculs.	291	\$4.00	\$1,044.00
Cordage.....quintals.	555	5.00	2,775.00
